| <b>Please also note the following:</b> <i>[FCC KDB quote]</i> These test exclusion conditions are based on source-based time-averaged maximum conducted output power of the RF channel requiring evaluation, adjusted for tune-up tolerance, and the minimum test separation distance required for the exposure conditions. The minimum test separation distance is determined by the smallest distance from the antenna and radiating structures or outer surface. <i>[End quote]</i> |            |     |                                                                                                                               |  |  |  |  |  |  |
