

## **Tune Up Procedure for Garmin A03139**

Each units TX and RX functionality is tested and judged with a pass/fail criteria during production. Unit meeting the criteria continue through production and other are returned for diagnostics.

The end user will have the ability to change the frequency channel of the transceiver. Each channel tunes the transceiver to a pre-set frequency set the by the Wi-Fi module. The end user will not have the ability to tune the transceiver outside of the certified range.

The following steps describe how to change the Wi-Fi transmit frequency by changing the frequency channel:

1. Turn the unit on by pressing the power key
2. From the HOME screen select Settings
3. Select Communications
4. Select Wi-Fi Network
5. Select Advanced
6. Select Wireless Channel
7. Use the keypad to enter the desired channel and press Done.
8. Use the back key to return to the Wireless Network menu or select Home to return to the HOME page.
