The device operating with 1mW output power and maintaining ≤ 5-cm distance complies with the requirements of RSS-102 Table 1 exclusion for SAR evaluation

KDB 447498 D01 General RF Exposure Guidance v06, 4.3.1. Standalone SAR test exclusion considerations 100 MHz to 6 GHz at separation distance less than or equal to 5 mm

SAR Test Exclusion Calculator

Insert values in yellow highlighted boxes to determine SAR Exclusion

Max Power	1	mW
Min Separation	5	mm
Frequency	2.4	GHz

When the minimum test separation distance is < 5 mm, a distance of 5 mm is applied to determine SAR test exclusion.

Answer **0.3** **Must be less than or equal to 3.0 for SAR Exclusion**

Please also note the following: [FCC KDB quote] These test exclusion conditions are based on source-based time-averaged maximum conducted output power of the RF channel requiring evaluation, adjusted for tune-up tolerance, and the minimum test separation distance required for the exposure conditions. The minimum test separation distance is determined by the smallest distance from the antenna and radiating structures or outer surface. [End quote]
