Subject: Request for Modular Approval with Microstrip trace on host PCB to antenna connector

Module FCC ID:IPH-03302  
Host FCC ID: IPH-A4624

We would like to request a Class II permissive Change for FCC on a module to include a specific reference trace on a specific host device. We would like the Class II permissive change to change this approval from a modular to a limited modular approval. Under this limited modular approval, the module would be limited to installation only in one particular host device. The microstrip trace between the module and the antenna connector and the antenna will therefore be part of the host device, which was tested in the host application certified under its own FCC ID certification number.

The module and host device are manufactured by the same company and they will maintain complete control over module integration.

Thank you,
