Competences and guarantees

DEKRA Certification Inc. is a testing laboratory accredited by A2LA (The American Association for Laboratory Accreditation), to perform the tests indicated in the Certificate 2764.01

DEKRA Certification Inc. is a testing laboratory competent to carry out the tests described in this report.

In order to assure the traceability to other national and international laboratories, DEKRA Certification Inc. has a calibration and maintenance program for its measurement equipment.

DEKRA Certification Inc. guarantees the reliability of the data presented in this report, which is the result of the measurements and the tests performed to the item under test on the date and under the conditions stated on the report and, it is based on the knowledge and technical facilities available at DEKRA Certification at the time of performance of the test.

DEKRA Certification Inc. is liable to the client for the maintenance of the confidentiality of all information related to the item under test and the results of the test.

The results presented in this Test Report apply only to the particular item under test established in this document.

IMPORTANT: No parts of this report may be reproduced or quoted out of context, in any form or by any means, except in full, without the previous written permission of DEKRA Certification Inc.

General conditions

- 1. This report is only referred to the item that has undergone the test.
- 2. This report does not constitute or imply on its own an approval of the product by the Certification Bodies or competent Authorities.
- 3. This document is only valid if complete; no partial reproduction can be made without previous written permission of DEKRA Certification Inc.
- 4. This test report cannot be used partially or in full for publicity and/or promotional purposes without previous written permission of DEKRA Certification Inc. and the Accreditation Bodies.

Uncertainty

Uncertainty (factor k=2) was calculated according to the DEKRA Certification internal document PODT000.

| Test case | Frequency (MHz) | U (k=2) | Units |
|----------------------------|-----------------|---------|-------|
| Radiated Spurious Emission | 30-180 | 4.27 | dB |
| | 180-1000 | 3.14 | dB |
| | 1000-18000 | 3.30 | dB |
| | 18000-40000 | 3.49 | dB |

Data provided by the client

Automotive Infotainment Head Unit.

DEKRA declines any responsibility with respect to the information provided by the client and that may affect the validity of results.

Usage of samples

Samples used for test have been selected by: The client.

Sample S/01 is composed of the following elements:

| Control Nº | Description | Model | Serial Nº | Date of reception |
|------------|---|-------|----------------|-------------------|
| 2874/54 | Garmin MGU 22 beam forming mode sample | MGU22 | GAG100L0000124 | 06/28/2021 |
| 2874/68 | Garmin MGU 22 non-beam forming mode sample | MGU22 | GAG100L0000166 | 09/07/2021 |
| 2874/15 | Antenna with Fakra Connector | | | 03/26/2021 |

Sample S/01 is composed of the following accessories:

| Control Nº | Description | Model | Serial N ^o | Date of reception |
|------------|---------------------------------|-------|-----------------------|-------------------|
| 2874/06 | Harness | | | 03/26/2021 |
| 2874/07 | Ant Wave Fakra 5G- GNSS | | 8705915-04 | 03/26/2021 |
| 3171/08 | BMW Antenna-DA Fakra 5G-GNSS | | 6520 8705915-04 | 03/05/2021 |
| 2874/12 | OABR Connector cable | | | 03/26/2021 |

1. Sample S/01 was used for the following test(s): All Radiated tests indicated in appendix A.

Identification of the client

Garmin International, Inc. 1200 E. 151st Street, Olathe, Kansas 66062, USA.

Testing period and place

| Test Location | DEKRA Certification, Inc. |
|---------------|---------------------------|
| Date (start) | 04-15-2021 |
| Date (finish) | 11-01-2021 |

Document history

| Report number | Date | Description |
|---------------|------------|---------------|
| 3154ERM.011 | 11-24-2021 | First release |

Environmental conditions

In the control chamber, the following limits were not exceeded during the test:

| Temperature | Min. = 15 °C Max. = 35 °C |
|-------------------|-------------------------------------|
| Relative humidity | Min. = 30 % Max. = 75 % |
| Air pressure | Min. = 860 mbar Max. = 1060 mbar |

In the semi anechoic chamber, the following limits were not exceeded during the test.

| Temperature | Min. = 15 °C Max. = 35 °C |
|-------------------|-------------------------------------|
| Relative humidity | Min. = 30 % Max. = 75 % |
| Air pressure | Min. = 860 mbar Max. = 1060 mbar |

In the chamber for conducted measurements, the following limits were not exceeded during the test:

| Temperature | Min. = 15 °C Max. = 35 °C |
|-------------------|-------------------------------------|
| Relative humidity | Min. = 30 % Max. = 60 % |
| Air pressure | Min. = 860 mbar Max. = 1060 mbar |

Remarks and comments

The tests have been performed by the technical personnel: Nasir Khan, Koji Nishimoto & Lourdes Maria Valverde

Testing verdicts

Note (1): Preliminary scan was performed to determine the worst case between two SISO ports (2.4 GHz + 5 GHz) and MIMO (2.4 GHz or 5 GHz) ports. The following tables and plots show the results for the worst case in MIMO (2.4 GHz or 5 GHz) + BT.

A.1: RADIATED EMISSIONS (Multi-Transmitters)

| LIMITS: | Product standard: | Part 15 Subpart C §15.247, Part 15 Subpart E §15.407 and RSS-247 | | |
|---------|-------------------|---|--|--|
| | Test standard: | Part 15 Subpart C §15.247 (d), Part 15 Subpart E §15.407 (b) (1) & (4) and | | |
| | | RSS-Gen 8.9 and 8.10 | | |

LIMITS

Radiated emissions which fall in the restricted bands, as defined in §15.205(a), must also comply with the radiated emission limits specified in §15.209(a) (see §15.205(c) / RSS-Gen):

| Frequency Range (MHz) | Field strength (µV/m) | Field strength (dBµV/m) | Measurement distance (m) |
|--------------------------|-----------------------|----------------------------|-----------------------------|
| 0.009-0.490 | 2400/F(kHz) | - | 300 |
| 0.490-1.705 | 24000/F(kHz) | - | 30 |
| 1.705 - 30.0 | 30 | - | 30 |
| 30 - 88 | 100 | 40 | 3 |
| 88 - 216 | 150 | 43.5 | 3 |
| 216 - 960 | 200 | 46 | 3 |
| 960 - 25000 | 500 | 54 | 3 |

The emission limits shown in the above table are based on measurements employing CISPR quasi-peak detector except for the frequency bands 9-90 kHz, 110-490 kHz and above 1000 MHz. Radiated emission limits in these three bands are based on measurements employing an average detector.

For average radiated emission measurements above 1000 MHz, there is also a limit corresponding to 20 dB above the indicated values in the table is specified when measuring with peak detector function.

RSS-247. Attenuation below the general field strength limits specified in RSS-Gen is not required

TEST SETUP

All radiated tests were performed in a semi-anechoic chamber. The measurement antenna is situated at 3 m for the frequency range 30-1000 MHz (Bilog antenna) and 1-18 GHz (Double ridge horn antenna, and at 1m for the frequency range 18-40 GHz (Double ridge horn antenna).

For radiated emissions in the range 18-40 GHz that is performed at a distance closer than the specified distance, an inverse proportionality factor of 20 dB per decade is used to normalize the measured data for determining compliance.

The equipment under test was set up on a non-conductive platform above the ground plane and the situation and orientation was varied to find the maximum radiated emission. It was also rotated 360° and the antenna height was varied from 1 to 4 meters to find the maximum radiated emission.

Measurements were made in both horizontal and vertical planes of polarization.

The field strength is calculated by adding correction factor to the measured level from the spectrum analyzer. This correction factor includes antenna factor, cable loss and pre-amplifiers gain.
