

### RF Exposure Evaluation

#### FCC Radiation Exposure Calculation

This equipment should be installed and operated with minimum distance specified below

Frequency	P <sub>o</sub>	P <sub>o</sub>	P <sub>o</sub> + 10% tolerance	FCC Maximum Exposure limit	Field Density a 20cm	Margin
MHz	dBm	mW	mW	mW/cm <sup>2</sup>	mW/cm <sup>2</sup>	mW/cm <sup>2</sup>
154.570	31.72	1485	1633	0.20	0.10	0.10

<b>Controlled exp.</b>	
<b>General pop.</b>	1

$$\text{Field Density} = (P_o \times G)/(4 \times \pi \times r^2)$$

1 = yes

Limit = 0.2 mW/cm<sup>2</sup>

G = Gain = - 5dBi = 0.32 (linear)

S = Field density limit at Frequency specified

P<sub>o</sub> = conducted output power

r = Min distance (cm)

Note: EIRP measurements are made when the antenna is not easily connected directly to a spectrum analyzer and the antenna gain is not published.
