Date: June 17, 2019

To: Federal Communications Commission
7435 Oakland Mills Road
Columbia, MD 21046

FCC ID: IPH-A3556

To Whom It May Concern:

This letter is to attest that Garmin International, Inc. product AA3556 was tested for SAR to a level more stringent than that stated in the operating manual.

The manual states

Radio Frequency Radiation Exposure

This device is a mobile transmitter and receiver that uses an internal antenna to send and receive low levels of radio frequency (RF) energy for data communications. The device emits RF energy below the published limits when operating in its maximum output power mode and when used with Garmin authorized accessories. To comply with RF exposure compliance requirements, the device should be installed and operated with a minimum of 5 mm (0.2 in.) between the device and your body. The device should not be used in other configurations. This device must not be co-located or operated in conjunction with any other transmitter or antenna.

It is Garmin's practice to test products to a more rigorous benchmark than the expected or specified criteria. In accordance with this policy, the SAR testing of the A03556 was performed at 0 mm rather than 5 mm.

Please do not hesitate to contact the undersigned should any additional information be required.

Sincerely,

Douglas Burroughs
Senior Compliance Engineer
