

Labels for Pepperl+Fuchs Ident-M System V

This new print plate will replace the current printing on the controller. Ink will be applied directly to the housing. Since the FCC ID is the only new piece of information on the print plate P+F may use an overprint or a clear adhesive label to be added to the current print. The position on the controller is indicated as an offset from the lower and right side of the controller. A red box on the image on the next page also indicates this location. A second new label will be applied informing the user about Compliance with part 15.

Second Label

The location of the following label is indicated by the blue box on the above image.

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation
