

Ruby,

Pictures for you. Please review and let me know if there are sufficient.

The 48760 has a LNA and a PA, three pictures for each amplifier, one top view, one side view and one bottom view. Please notice, the device (board) is directly mounted on the bottom plate, can not be taken off.

The 48960 has a combine amplifier, also three pictures for top, bot and side view. The board is also directly mounted on the bottom plate and can not be taken off.

Thanks

Xiangqing
