

T4-2400 Transmitter circuit manual

Summarize of Circuit

The T4-2.4G transmitter is made up with high frequency circuit, code circuit and assistant circuit. The HF part includes a universal 2.4G circuit board. The assistant circuit includes 2 packs 3V powers, LED of power circuit and coach control circuit. This transmitter has 4 proportional control channels, P1- P4 is the control pot of each proportional channel. When transmitted different voltage into each pins of MCU C8051F330, the pins 15-19 will out-puts a pulse train used to modulating carrier signal..
