RE: Ad Hoc Attestation for FCC ID: **J9C-DC544D1**

Please be advised that as a Linux client, the 65-VN780-P1 PCIe Daughter Card for 2.4/5GHz Client Applications and drivers which are distributed only in binary form by QUALCOMM to authorized ODMs/OEMs as well as distributed by QUALCOMM with 65-VN780-P1 samples, support Ad Hoc (IBSS) within those countries governed by FCC regulatory statues on only those non-DFS (Dynamic Frequency Selection) bounded channels allowable by FCC statues. Qualcomm hereby attests that Ad Hoc mode is disabled on non-US frequencies and on DFS frequencies (5.25-5.35 GHz and 5.47-5.725 GHz). This device does not transmit beacons in 5.25-5.35 GHz and 5.47-5.725 GHz bands.

Best Regards,

Srinivas Kandala
