C	October 29, 2009	Update for corrected WWAN SAR values

# 1 Overview

---

This document provides collocated SAR analysis of the Dell® notebook model Latitude™ E4200 (PP15S) in reference to KDB 616217.

The change filed under this application is adding notebook model PP15S collocated with WLAN modules QDS-BRCM1030, QDS-BRCM1031, E2K512ANHMW, E2K533ANH, WLAN/WiMAX combo module PD9512ANXHD and Bluetooth module QDS-BRCM1033. Because power levels for the Bluetooth module is <60/f, it is not included as part of this analysis.

The analysis shows that notebook model PP15S is compliant for all combinations of WWAN and WLAN modules based on the SAR summation of individual SAR measurement results.

## 1.1 Definitions

$$n_x = \frac{P_x}{60/f} - 1$$

*n* = number of times by which an antenna's output power exceeds 60/f, calculated to determine an antenna's user separation threshold for test reduction procedures.

*P* = antenna average output power

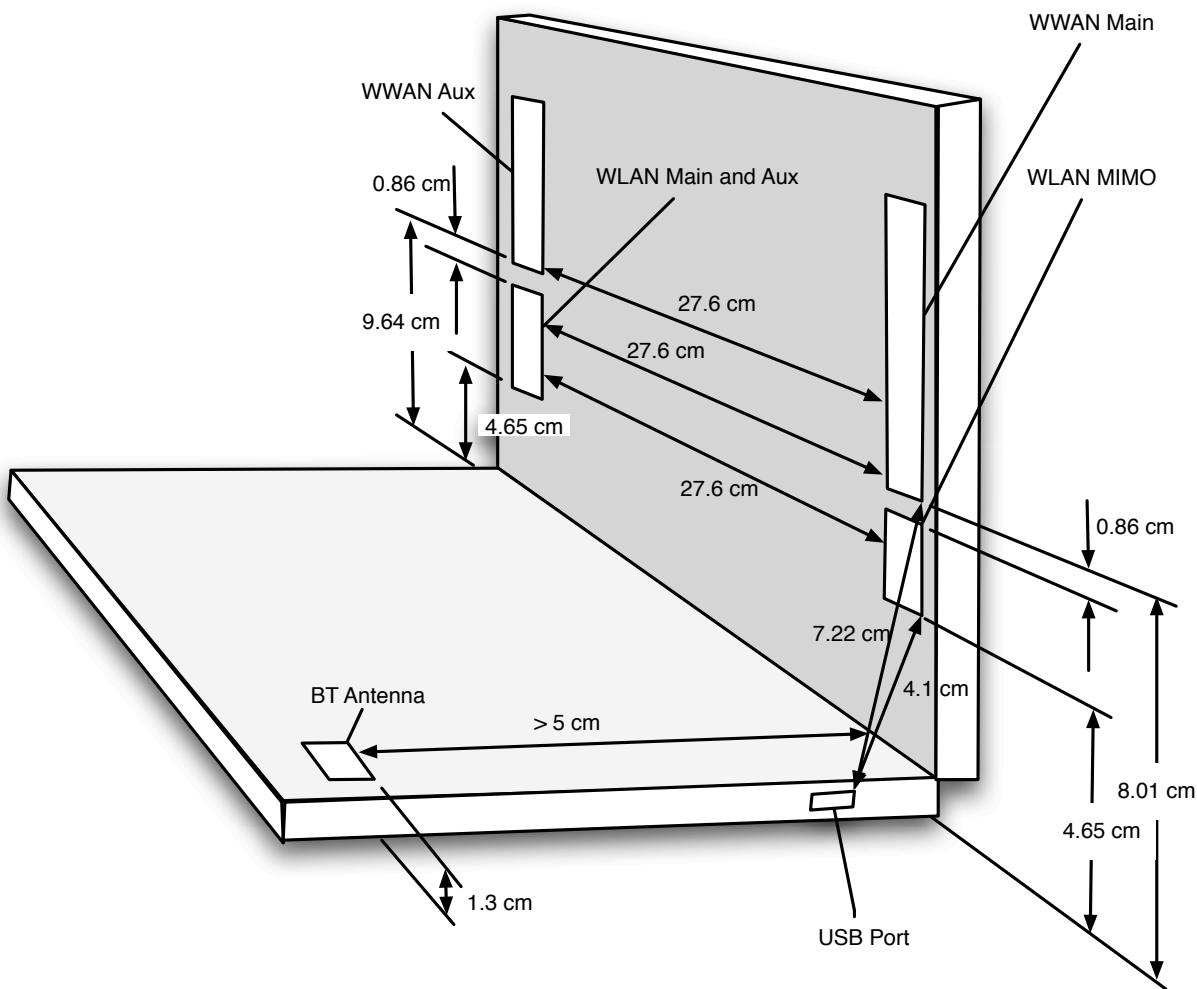

*f* = frequency in MHz

## 1.2 Antenna Locations and Separation Distances

**Table 1-1 Antenna Separation Distances**

Antenna	Distance (cm)
WLAN Main-to-user	4.7
WLAN Aux-to-user	4.7
WWAN main-to-user	8.01
