Re: Change Letter

This letter describes the changes to the Globalstar Satellite Data Voice Modem. The change is to incorporate a new antenna that is external to the modem, and therefore no changes to the modem itself have been made. The new antenna is manufactured by ANTCOM Corporation of Torrance, CA and is a circularly polarized patch antenna design with a passive transmit antenna with a maximum gain of 5.7 dBic. The current antenna has a maximum gain of 6.0 dBic. The reason for the new antenna is to improve the coverage of the modem when the Globalstar satellites are near the horizon.

Sincerely,

A handwritten signature in black ink, appearing to be "Paul Jayne", written in a cursive style.
