

AmberWatch Mobile HERO

"Every Kid needs a HERO"

USER GUIDE

The AmberWatch Foundation

Mission

The AmberWatch Foundation [AWF] is a national non-profit dedicated to the prevention of child abduction and molestation. AWF provides innovative educational programs and tools to help children stay safe from sexual predators and abduction.

Philosophy

When it comes to issues of personal safety, AWF believes that if the children and parents can see it, hear it and talk about it, they will learn it! For this reason, the AmberWatch Foundation "Be Safe!" Education Program was created to dynamically and proactively educate children and parents on the dangers that exist, and how they can protect themselves from child abductors and molesters. AWF is also on a constant lookout for the latest consumer-ready technologies in an effort to leverage the latest advancements in our quest to protect the nation's children.

Implementation

The AmberWatch Foundation "Be Safe!" Education Program is a four-pronged approach to arming children against abductors and molesters. The AmberWatch Foundation is fulfilling its mission by:

1. Presenting the "Be Safe!" Curriculum in schools and nationally recognized civic groups with the help of local law enforcement professionals
2. Distributing the "Be Safe!" Book to ignite conversation between parents and children
3. Disseminating print, radio and television public service announcements nationwide
4. Making available innovative safety devices aimed at helping children stay safe from predators and abductors

The AmberWatch Mobile Initiative

The *AmberWatch Mobile Initiative* is supported by a collaboration of the wireless industry to serve our children through innovative technology. 100% of the net proceeds from the AmberWatch Mobile HERO service fees will fund the AmberWatch Foundation and their beneficiaries committed to the safety, education, and well-being of our children.

Overview

The AmberWatch Mobile HERO is a small and simple GPS tracking device based on Qualcomm gpsOne technology and complementary control-server technology for accurate, real-time tracking. It is fully compatible with the CDMA2000 1x standard and its design is optimized to minimize cost and size while maximizing battery life and offering superb positioning location performance.

Features

- Small size
- Simplified operation
- Intelligent hibernation
- Extended battery life (up to 10 days)
- Assistance request button
- Over-the-air configuration and monitoring

Hibernation

Hibernation is an innovative concept in the cellular world. It extends battery life beyond normal cellular phone standby time. Hibernation technology comprises several innovative modes of battery saving and smart mechanisms automatically select the best fit mode based on how the device is being used.
