1. Summary

1.1 Purpose

QUALCOMM Incorporated submits this test report and associated test data in consideration of Regulatory Type Approval for the following Qualcomm manufactured product.

This report contains radiated maximum output power and radiated spurious emissions test results for the UNDP-1 module while installed in Lenovo® ThinkPad® X200T Tablet Notebook that has been modified by the replacement of the standard WWAN antennas with antennas manufactured by WNC. This test report supports a Class II Permissive change for J9CUNDP-1L in reference to FCC Part 22 and Part 24 regulations.

Test results and associated data are provided to demonstrate that the UNDP-1 radiated transmit power and radiated emissions when installed in a host notebook computer comply with CFR 47 Parts 22 and 24 with modification of the ACON antennas located in the LCD panel of the notebook. The antenna parameters for the notebook computers are further detailed in the attachments associated with the permissive change filing.

Testing was only completed for GPRS modes as this mode had the highest peak power in the original filing J9CUNDP-1L. The other modes of operations will have lesser peak power as they utilize the same transmit antenna as GPRS and the conducted test results demonstrate that GRPS has the highest peak power.

Note that a change of ID was completed on January 23, 2008 to generate FCC ID J9CUNDP-1L from J9CUNDP-1 original granted January 18, 2008. The UNDP-1 module is electrically and mechanically identical between the two filings.

1.2 Module Description

Based on QUALCOMM's premier MDM1000™, RFR6500™, RTR6285™, PM6653™ and system software, UNDP-1 delivers WWAN connectivity solutions for the CDMA2000/1xEVDO, WCDMA/HSPA and GSM/GPRS/EDGE protocols in one hardware configuration. In addition to WWAN, the product provides GPS in the same hardware device. The UNDP-1 solution consists of hardware and a software application for embedded wireless connectivity in notebook PCs. It is in the form of an embedded PCI Express mini-card.

Table 1.4-1 Radiated Transmit Power Summary

Mode	Band	Max ERP	Max ERP (W)
GPRS	850 MHz	29.9	0.98

Mode	Band	Max EIRP	Max EIRP (W)
GPRS	1900 MHz	30.6	1.15

Table 1.4-2 Radiated Emissions Test Summary

No.	Requirement	Result
1	Part 22 Radiated Emissions	Pass
2	Part 24 Radiated Emissions	Pass

No emissions within 15dB of the limits were observed.

2. Product Description and Declaration

The following declarations are made regarding test of the UNDP-1.

2.1 System Configuration

The UNDP-1 is a universal embedded-data-connectivity modem in the form of PCI Express mini-card.

Table 2.1-1 Module Summary

WWAN Module Model	UNDP-1
WWAN Module FCC ID	J9CUNDP-1L
WWAN Module Description	UNDP-1 is a PCI Express Mini Card with WWAN connectivity for the WCDMA/HSPA, GSM/GPRS/EDGE and CDMA2000 1x/1x-EVDO protocols, plus GPS position location.
Host(s) Tested:	Lenovo® ThinkPad X200T Tablet Notebook
WWAN Technologies	GSM/GPRS/EDGE CDMA 1x Rel0 CDMA EV-DO Rev A WCDMA/HSPA
Equipment Categories	GPRS Category 10 EDGE Category 10 HSDPA Category 8 (Release 6) HSUPA Category 5 (Release 6)
TX Frequencies	GSM/GPRS/EDGE: 824.2 – 848.8 MHz GSM/GPRS/EDGE: 1850.2 – 1909.8 MHz CDMA 1x/EV-DO: 824.7 – 848.31 MHz CDMA 1x/EV-DO: 1851.25 – 1908.75 MHz WCDMA/HSPA: 826.4 – 846.6 MHz WCDMA/HSPA: 1852.4 – 1907.5 MHz Bands Not used in the United States: GSM/GPRS/EDGE: 880.2 – 914.8 MHz GSM/GPRS/EDGE: 1710.2 – 1784.8 MHz WCDMA/HSPA: 1922.6 – 1977.4 MHz
Duty Cycle(s)	CDMA/WCMA: 100% GPRS 1 uplink slot: 12.5% GPRS 2 uplink slots: 25%
Power Supply	3.3Vdc supplied by host notebook computer

BT Antenna(s)	N/A
WLAN Antenna(s)	N/A

3. Test Facility and Equipment

3.1 Test Site

All applicable tests were performed at the test facilities noted in Table 3.1-1. For test cases that required equipment not available at Qualcomm facilities, testing was performed at 7 Layers, Inc.

Table 3.1-1 Test Site Locations

Test Section	Test Site
EN 301 908-1	
Maximum Transmit Power	EMC Lab in Building X. This EMC test facility is accredited and listed in the Technology International Lab network, and has been assigned the certificate number 00-042.
Radiated Emissions	EMC Lab in Building X. This EMC test facility is accredited and listed in the Technology International Lab network, and has been assigned the certificate number 00-042.

3.2 Laboratory Test Equipment

All measurements were made with instruments whose operation and accuracy have been verified by an accredited calibration laboratory with traceability to National standards.

The test equipment used for radiated measurements is contained in Appendix B of this report.

3.3 Measurement Uncertainty Summary

Calibration of the instrumentation used for measurements is performed to ANSI/NCSL, Z540-1-1994, ISO-9001-1994, and ISO 10012-1:1992, and is traceable to NIST reference standards.

Calculated measurement uncertainties for the manual radiated emissions measurements performed in the Qualcomm EMC Lab are as shown in Table 3.3-1 below. The uncertainty values below were calculated using the methodologies defined in ETR 028 (Second Edition, March 1994), ANSI/INCSL Z540-2-1997, NAMAS NIS 81 (May 1994), and NIST TN 1297 (1994 Edition).

Radiated uncertainty value achieved is documented in the 80-31351-1 X1, Qualcomm EMC Lab Uncertainty Report.

Table 3.3-1 Radiated Measurement Uncertainties

Measured Parameter	Calculated Expanded Measurement Uncertainty for a 95% Confidence Level (k = 2 Coverage Factor)	Maximum Measurement Uncertainty (UE) Required in EN 301 908-1 v3.2.1
Effective radiated RF power	± 2.63 dB 30 - 180 MHz	± 6 dB
Effective radiated RF power	± 2.63 dB 180 - 1000 MHz	± 3 dB
Effective radiated RF power	± 2.82 dB 1 GHz to 12.75 GHz	± 3 dB

4. Test Setup, Method and Procedure

4.1 Test Frequencies

GPRS low, mid, and high channels were tested at the frequencies defined in Table 4.1-1. No other modes were tested.

Table 4.1-1 UNDP-1 Test Channels

	850 MHz						1900 MHz					
	Low		Mid		High		Low		Mid		High	
	Ch	Freq	Ch	Freq	Ch	Freq	Ch	Freq	Ch	Freq	Ch	Freq
GSM	128	824.2	190	836.6	251	848.8	512	1850.2	661	1880	810	1909.8
CDMA	1013	824.7	384	836.52	777	848.31	25	1851.25	600	1880	1175	1908.75
WCDMA	UL: 4132 DL: 4357	826.4	UL: 4182 DL: 4407	836.4	UL: 4233 DL: 4458	846.6	UL: 9262 DL: 9847	1852.4	UL: 9400 DL: 9800	1880	UL: 9538 DL: 9763	1907.6

4.2 Test Procedures

For all testing, the UNDP module was configured to transmit at maximum power for all testing per the procedure defined in Appendix B.

4.2.1 Transmitter maximum output power

Maximum output power was tested per the procedure defined in Section 2.2.17 of TIA/EIA 603C.

To maximize the measured emissions levels, the receive antenna was moved between a 1 and 4 meter height, and the EUT was rotated from 0 to 360 degrees.

Figure 4-1 Radiated Test Setup

4.2.2 Radiated Emissions

Radiated emissions were tested per the procedure defined in Section 2.2.12 of TIA/EIA 603C.

To maximize the measured emissions levels, the receive antenna was moved between a 1 and 4 meter height, and the EUT was rotated from 0 to 360 degrees.

5. Test Results Summary

This section summarizes the results of the tests, having compared the measured data against the applicable criteria from FCC Part 22 and Part 24. Measurement test data can be found in the Appendix sections.

5.1 Test Result Summary

5.1.1 Radiated Maximum Transmit Output Power

Table 5.1-1 GPRS 850MHz ERP Test Result Summary

Appendix B Base Station Emulator Settings and Test Procedures

B.1 For CDMA2000 1x/EVDO

Use CDMA2000 Rev 6 protocol in the call box.

- 1) Test for Reverse/Forward TCH RC1, Reverse/Forward TCH RC2, and RC3 Reverse FCH and demodulation of RC 3, 4 or 5.
 - a. Set up a call using Fundamental Channel Test Mode 1 (RC1, SO 2) with 9600 bps data rate only.
 - b. As per C.S0011 or TIA/EIA-98-F Table 4.4.5.2-1, set the test parameters as shown in Table 5-2.
 - c. Send continuously '0' power control bits to the UNDP-1.
 - d. Measure the output power at UNDP-1 antenna connector as recorded on the power meter with values corrected for cables losses.
 - e. Repeat step b through d for Fundamental Channel Test Mode:
 - i. RC1, SO55
 - ii. RC2, SO9
 - iii. RC2, SO55
 - iv. RC3, SO55
- 2) Test for RC 3 Reverse FCH, RC3 Reverse SCH0 and demodulation of RC 3, 4 or 5.
 - a. Set up a call using Supplemental Channel Test Mode 3 (RC 3, SO 32) with 9600 bps Fundamental Channel and 9600 bps SCH0 data rate.
 - b. As per C.S0011 or TIA/EIA-98-F Table 4.4.5.2-2, set the test parameters as shown in Table 5-3.
 - c. Send alternating '0' and '1' power control bit to the UNDP-1
 - d. Determine the active channel configuration. If the desired channel configuration is not the active channel configuration, increase \hat{I}_{or} by 1 dB and repeat the verification. Repeat this step until the desired channel configuration becomes active.
 - e. Measure the output power at the UNDP-1 antenna connector.
 - f. Decrease \hat{I}_{or} by 0.5 dB.
 - g. Determine the active channel configuration. If the active channel configuration is the desired channel configuration, measure the output power at the UNDP-1 antenna connector.
 - h. Repeat step f and g until the output power no longer increases or the desired channel configuration is no longer active. Record the highest output power achieved with the desired channel configuration active.
 - i. Repeat step a through h ten times and average the result.
- 3) Test for RC3 Reverse FCH, RC 3 DCCH and demodulation of RC3, 4 or 5.
 - a. Use the same procedure as described in 2).

Table 5-2 Parameters for Max. Power with a single traffic code channel, SR1

Parameter	Units	Value
\hat{I}_{or}	dBm/1.23 MHz	-104
$\frac{\text{Pilot } E_c}{I_{or}}$	dB	-7
$\frac{\text{Traffic } E_c}{I_{or}}$	dB	-7.4

Table 5-3 Parameters for Max. Power with multiple traffic code channel, SR1

Parameter	Units	Value
$\frac{\text{Pilot } E_c}{I_{or}}$	dB	-7
$\frac{\text{Traffic } E_c}{I_{or}}$	dB	-7.4

1xEV-DO

1) Use 1xEV-DO Rel 0 protocol in the call box.

a. RTAP

- Select Test Application Protocol to RTAP
- Set RTAP Rate to 9.6 kbps
- Generator Info -> Termination Parameters -> Max Forward Packet Duration -> 16 Slots
- Set \hat{I}_{or} to -60 dBm/1.23 MHz
- Send continuously '0' power control bits
- Measure the power at UNDP-1 antenna connector
- Repeat above steps for RTAP Rate = 19.2 kbps, 38.4 kbps, 76.8 kbps and 153.6 kbps respectively

2) Use 1xEV-DO Rev A protocol in the call box.

a. RETAP

- Select Test Application Protocol to RETAP
- F-Traffic Format -> 4 (1024, 2, 128) Canonical (307.2k, QPSK)
- Set R-Data Pkt Size to 128
- Protocol Subtype Config -> Release A Physical Layer Subtype -> Subtype 2
 ->PL Subtype 2 Access Channel MAC Subtype -> Default (Subtype 0)
- Generator Info -> Termination Parameters -> Max Forward Packet Duration -> 16 Slots

->ACK R-Data After -> Subpacket 0 (All ACK)

- Set \hat{I} for to -60 dBm/1.23 MHz
- Send continuously '0' power control bits
- Measure the power at UNDP-1 antenna connector
- Repeat above steps for R-Data Pkt Size = 256, 512, 768, 1024, 1536, 2048, 3072, 4096, 6144, 8192, 12288 respectively.
- Repeat above steps for R-Data Pkt Size = 256, 512, 768, 1024, 1536, 2048, 3072, 4096, 6144, 8192, 12288 respectively.

B.2 For WCDMA/HSDPA/HSUPA

Configure the call box to support all WCDMA tests in respect to the 3GPP 34.121 (listed in Table 5-4).

Rel99

- 1) Set a Test Mode 1 loop back with a 12.2kbps Reference Measurement Channel (RMC)
- 2) Set and send continuously Up power control commands to the UNDP-1

HSDPA Rel 6

- 1) Establish a Test Mode 1 look back with both 1 12.2kbps RMC channel and a H-Set1 Fixed Reference Channel (FRC). With the 8820 this is accomplished by setting the signal Channel Coding to "Fixed Reference Channel" and configuring for HSET-1 QKSP.
- 2) Set beta values and HSDPA settings for HSDPA Subtest1 according to Table 5-4
- 3) Send continuously Up power control commands to the UNDP-1
- 4) Measure the power at the UNDP-1 antenna connector using the power meter with modulated average detector
- 5) Repeat the measurement for the HSDPA Subtest2, 3 and 4 as given in Table 5-4

HSUPA Rel 6

- 1) Use UL RMC 12.2kbps and FRC H-Set1 QPSK, Test Mode 1 loop back. With the 8820 this is accomplished by setting the signal Channel Coding to "E-DCH Test Channel" and configuring the equipment category to Cat6_10ms.
- 2) Set the Absolute Grant for HSUPA Subtest1 according to Table 5-4
- 3) Set the UNDP power to be at least 5dB lower than the Maximum output power
- 4) Send power control bits to give one TPC_cmd = +1 command to the UNDP. If UNDP doesn't send any E-DPCH data with decreased E-TFCI within 500ms, then repeat this process until the decreased E-TFCI is reported.
- 5) Confirm that the E-TFCI transmitted by the UNDP is equal to the target E-TFCI in Table 5-4. If the E-TFCI transmitted by the UNDP is not equal to the target E-TFCI, then send power control bits to give one TPC_cmd = -1 command to the UE. If UE sends any E-DPCH data with decreased E-TFCI within 500 ms, send new power control bits to give one TPC_cmd = -1 command to the UE. Then confirm that the E-TFCI transmitted by the UE is equal to the target E-TFCI in Table 5-4. If the E-TFCI transmitted by the UE is not equal to the target E-TFCI, then fail the UE
- 6) Repeat the measurement for the HSUPA Subtest2, 3, 4 and 5 as given in Table 5-4

Table 5-4 3GPP Rel99/HSPA Subtest Settings

	Mode	Rel99	Rel6 HSDPA	Rel6 HSDPA	Rel6 HSDPA	Rel6 HSDPA	Rel6 HSUPA	Rel6 HSUPA	Rel6 HSUPA	Rel6 HSUPA	Rel6 HSUPA

B.3 For GSM/GPRS/EGDE

- Configure the call box to support GPRS test.
- Configure for desired number of uplink transmit lots.
- Set MS_TX level to 0 (850 MHz) or 2 (1900MHz) to configure EUT to transmit at maximum output power.
