RE: FCC ID: JCK-GN-WLCM201

Attention: Ellis Wu

I have a few comments on this Application.

- 1 FYI – no action needed. Please note that this is a portable device as well as being able to be used in a PCMCIA slot with an adapter. MPE is only valid for the mobile application and is not an appropriate method to determine rf exposure in the portable configuration. However, since this device is under 25mW it can be used within 2.5cm of the Body in a portable configuration without SAR testing. A statement explaining this is all that is needed.
- 2 FYI – no action needed. Since the Compact Flash profile is typically for the purpose of use in devices like PDAs etc, testing should be performed in its typical use as well as in the Lap top.
- 3 The manual should describe the typical use of the CF card. The understood 'typical' use of this type form factor is for PDA and other CF I/O protocol devices. The manual, while mentioning a Windows CE platform, does not mention use in a PDA using this platform. The MPE report also specifically mentions it is a portable device – i.e. PDA use. This explanation should instruct the user in how to install the program etc for the PDA or other Windows CE device. Please explain why this typical use of this device in a PDA has not been mentioned.
