RE: Rokonet Electronics Ltd.

FCC ID: JE4RK200DT

After a review of the submitted information, I have a few comments on the above referenced Application.

- 1) In regards to plot in 7.2.1., the RBW used in this plot was 100 kHz not 1 MHz. Additionally, given the span of 50 MHz, the carrier frequency appears to be a whole division off from what the carrier should be (> 5 MHz). Therefore, please explain why the theory states that the device transmits at 10525 \pm 5 MHz, but the center frequency in plots 7.2.1 and various other plots appear to be centered around 10519. Is 10525 supposed to be the frequency of RF TX?

Timothy R. Johnson
Examining Engineer
