Subject: 2-Way Rolling Code Transmitter – Product Description

The EUT is a wireless 433.92MHz 8 button rolling code wireless transmitter. The unit includes a small PCB, with an integral PCB printed antenna, powered by a 3V CR-1/3N lithium battery, inside a plastic enclosure.

The remote control is used to arm, disarm, and get system status.

The keypad is using 2-way communication, so every message is sent to the control panel once, and if no acknowledge signal is received, then the message is repeated to a total of up to 7 repetitions (8 bursts total)

Other RF information can be found in the enclosed ITL report.
