

SAR TEST REPORT

Test Report No. 15106908H-E-R1

| Customer | Audio-Technica Corporation |
|---------------------|--|
| Description of EUT | UNIPAK® TRANSMITTER |
| Model Number of EUT | ATW-T210cS |
| FCC ID | JFZT210CS |
| Test Regulation | FCC47CFR 2.1093 |
| Test Result | Complied |
| Issue Date | June 28, 2024 |
| Remarks | The highest reported SAR Body : 0.25 W/kg (1 g) |

Representative Test Engineer Approved By Uceiya Matsuyama Satofumi Matsuyama Yuta Moriya Engineer Engineer ACCREDITED CERTIFICATE 5107.02 The testing in which "Non-accreditation" is displayed is outside the accreditation scopes in UL Japan, Inc. \boxtimes There is no testing item of "Non-accreditation". Report Cover Page - Form-ULID-003532 (DCS:13-EM-F0429) Issue# 23.0

ANNOUNCEMENT

- This test report shall not be reproduced in full or partial, without the written approval of UL Japan, Inc.
- The results in this report apply only to the sample tested. (Laboratory was not involved in sampling.)
- This sample tested is in compliance with the limits of the above regulation.
- The test results in this test report are traceable to the national or international standards.
- This test report must not be used by the customer to claim product certification, approval, or endorsement by the A2LA accreditation body.
- This test report covers SAR technical requirements. It does not cover administrative issues such as Manual or non-SAR test related Requirements. (if applicable)
- The all test items in this test report are conducted by UL Japan, Inc. Ise EMC Lab.
- The opinions and the interpretations to the result of the description in this report are outside scopes where UL Japan, Inc. has been accredited.
- The information provided by the customer for this report is identified in SECTION 1.
- The laboratory is not responsible for information provided by the customer which can impact the validity of the results.
- For test report(s) referred in this report, the latest version (including any revisions) is always referred.

REVISION HISTORY

Original Test Report No. 15106908H-E

This report is a revised version of 15106908H-E. 15106908H-E is replaced with this report .

SECTION 1: Customer information

| Company Name | Audio-Technica Corporation | |
|------------------|---|--|
| Address | 2-46-1 Nishi-naruse, Machida, Tokyo 194-8666, Japan | |
| Telephone Number | +81-42-739-9121 | |
| Contact Person | Hirohisa Yamamoto | |

The information provided by the customer is as follows;

- Customer, Description of EUT, Model Number of EUT, FCC ID on the cover and other relevant pages
- Operating/Test Mode(s) (Mode(s)) on all the relevant pages
- SECTION 1: Customer Information
- SECTION 2: Equipment Under Test (EUT) other than the Receipt Date and Test Date
- SECTION 5: Tune-up tolerance information and software information

SECTION 2: Equipment under test (EUT)

2.1 Identification of EUT

| Description | UNIPAK® TRANSMITTER |
|---------------|---|
| Model Number | ATW-T210cS |
| Serial Number | No.8 |
| Condition | Production prototype |
| | (Not for Sale: This sample is equivalent to mass-produced items.) |
| Modification | No Modification by the test lab |
| Receipt Date | April 1, 2024 |
| Test Date | April 4, 2024 (For Output power measurement) |
| | April 25, 2024 (For SAR measurement) |

2.2 Product Description

General Specification

| Rating | DC 3.0 V (Battery (2 x Alkaline AA Batteries)) |
|---------------------|--|
| Option battery | N/A |
| Body-worn accessory | Typical microphone, Beltclip |

Radio Specification

This report contains data provided by the customer which can impact the validity of results. UL Japan, Inc. is only responsible for the validity of results after the integration of the data provided by the customer. The data provided by the customer is marked "a)" in the table below.

| Radio type | Transmitter |
|------------------------------|--|
| Modulation type | FM |
| Necessary bandwidth | 110 kHz = 2M + 2D |
| - | where M: Maximum modulation frequency = 15 kHz |
| | D: Peak deviation = 40 kHz |
| Declared Channel | 200 kHz |
| Bandwidth (B) | |
| Frequency of operation | 508.125 MHz to 526.825 MHz |
| RF power | 10 mW, 30 mW |
| Antenna gain ^{a)} : | 0 dBi max |

SECTION 3: Test standard information

3.1 Test Specification

3.3 Additions or deviations to standard

Other than above, no addition, exclusion nor deviation has been made from the standard.

3.4 Exposure limit

| ·/ =··································· | | | | | |
|---|---------------------------|--|--|--|--|
| Spatial Average | Spatial Peak | Spatial Peak | | | |
| (averaged over the whole | (averaged over any 1 g of | (hands/wrists/feet/ankles averaged over 10 | | | |
| body) | tissue) | g) | | | |
| 0.4 | 8.0 | 20.0 | | | |

(B) Limits for General population/Uncontrolled Exposure (W/kg)

| Cratic Average | | Cratic Deals |
|--------------------------|---------------------------|---|
| Spatial Average | Spatial Peak | Spatial Peak |
| (averaged over the whole | (averaged over any 1 g of | (hands/wrists/feet/ankles averaged over |
| body | tissue) | 10 g) |
| 0.08 | 1.6 | 4.0 |

Occupational/Controlled Environments: are defined as locations where there is exposure that may be incurred by people who are aware of the potential for exposure, (i.e. as a result of employment or occupation).

General Population/Uncontrolled Environments: are defined as locations where there is the exposure of individuals who have no knowledge or control of their exposure.

NOTE:GENERAL POPULATION/UNCONTROLLED EXPOSURE SPATIAL PEAK(averaged over any 1 g of tissue) LIMIT 1.6 W/kg

3.5 SAR

Specific Absorption Rate (SAR): The time derivative (rate) of the incremental energy (dW) absorbed by (dissipated in) an incremental mass (dm) contained in a volume element (dV) of a given density (ρ), as shown in the following equation:

$$SAR = \frac{d}{dt} \left(\frac{dW}{dm} \right) = \frac{d}{dt} \left(\frac{dW}{\rho dV} \right)$$

SAR is expressed in units of watts per kilogram (W/kg) or equivalently milliwatts per gram (mW/g).

SAR is related to the E-field at a point by the following equation:

$$SAR = \frac{\sigma |E|^2}{\rho}$$

where

 σ = conductivity of the tissue (S/m) ρ = mass density of the tissue (kg/m3) E = rms E-field strength (V/m)

3.6 Test Location

UL Japan, Inc. Ise EMC Lab. Shielded room for SAR testing *A2LA Certificate Number: 5107.02 / FCC Test Firm Registration Number: 884919 ISED Lab Company Number: 2973C / CAB identifier: JP0002 4383-326 Asama-cho, Ise-shi, Mie-ken 516-0021 JAPAN Telephone : +81-596-24-8999

SECTION 4: Test result

4.1 Result

Complied Highest values at each band are listed next section.

4.2 Stand-alone SAR result

| RF Exposure C | onditions | Equipment Class - Highest Reported SAR (W/kg) | | | |
|----------------------------|-----------|---|--|--|--|
| | Unations | Radio microphone | | | |
| Standalone Tx (1-g SAR) | Body-worn | 0.246 | | | |

*Details are shown at section 12

4.3 Simultaneous transmission SAR result

EUT does not have simultaneous transmission functionality.

SECTION 5: Tune-up tolerance information and software information

| Mode | Frequency band | Maximum tune-up tolerance limit | Maximum tune-up tolerance limit |
|------------------|-------------------|---------------------------------|---------------------------------|
| | [MHz] | [dBm] (Burst Average) | [mW] (Burst Average) |
| Radio microphone | 508.125 to | 15.31 | 34.00 |
| | 526.825 | 15:31 | 34:00 |

Maximum tune-up tolerance limit

| Software setting | |
|--|---|
| *The power value or product specification | f the EUT was set for testing as follows (setting value might be different from n value); |
| Power settings: | 30 mW |
| Software: | Ver1.0 |
| *This setting of soft | ware is the worst case. |

The test was performed with condition that obtained the maximum average power (Burst) in pre-check. Any conditions under the normal use do not exceed the condition of setting.

In addition, end users cannot change the settings of the output power of the product.

SECTION 6: RF Exposure Conditions (Test Configurations)

6.1 Summary of the distance between antenna and surface of EUT

| Test position | Distance |
|---------------|----------|
| Front | 0.00 mm |
| Rear | 0.00 mm |
| Left | 0.00 mm |
| Right | 0.00 mm |
| Тор | 0.00 mm |
| Bottom | 92.30 mm |

*Details are shown in appendix 4

6.3 SAR test exclusion considerations according to KDB 447498 D01

The following is based on KDB 447498 D01.

1) The 1-g and 10-g SAR test exclusion thresholds for 100 MHz to 6 GHz at test separation distances \leq 50 mm are determined by:

[(max. power of channel, including tune-up tolerance, mW)/(min. test separation distance, mm)] $\cdot [\sqrt{f(GHz)}] \le 3.0$ for 1-g SAR and ≤ 7.5 for 10-g extremity SAR

- 1. The upper frequency of the frequency band was used in order to calculate standalone SAR test exclusion considerations.
- 2. Power and distance are rounded to the nearest mW and mm before calculation
- 3. The result is rounded to one decimal place for comparison
- 4. The test exclusions are applicable only when the minimum test separation distance is ≤ 50 mm and for transmission frequencies between 100 MHz and 6 GHz. When the minimum test separation distance is < 5 mm, a distance of 5 mm is applied to determine</p>
- 5. "N/A" displayed on below exclusion calculation means not applicable this formula since distance between antenna and surface is > 50 mm.

When the calculated threshold value by a numerical formula above-mentioned in the following table is 3.0 or less, SAR test is excluded.

The following table lists only the highest tune up limit in each frequency band.

The following table lists only the highest channel in each frequency band.

SAR exclusion calculations for antenna <50mm from the user

| Antenna | Tx Interface | Frequency (MHz) | Output | Pow er | Calculated Thres | alculated Threshold Value | | | | | | | |
|---------|-----------------|--------------------|--------|--------|------------------|---------------------------|------------------|------------------|------------------|--------|--|--|--|
| | | | dBm | mW | Front | Rear | Left | Right | Тор | Bottom | | | |
| Main | FM | 526.825 | 15.31 | 34 | 4.9 -MEASURE- | 4.9 -MEASURE- | 4.9 -MEASURE- | 4.9 -MEASURE- | 4.9 -MEASURE- | N/A | | | |

2) At 100 MHz to 6 GHz and for test separation distances > 50 mm, the SAR test exclusion threshold is determined according to the following.

a) $[(3.50)/(\sqrt{f(GHz)})) + (test separation distance - 50 mm) \cdot (f(MHz)/150)] mW at > 100 MHz and <math>\leq 1500 MHz$

b) $[(3.50)/(\sqrt{f(GHz)})) + (test separation distance - 50 mm) \cdot 10] mW$ at > 1500 MHz and $\leq 6 GHz$

- 1. The upper frequency of the frequency band was used in order to calculate standalone SAR test exclusion considerations.
- 2. Power and distance are rounded to the nearest mW and mm before calculation
- 3. "N/A" displayed on below exclusion calculation means not applicable this formula since distance between antenna and surface is < 50 mm.

When output power is less than the calculated threshold value by a numerical formula above-mentioned in the following table, SAR test is excluded.

The following table lists only the highest tune up limit in each frequency band.

The following table lists only the highest channel in each frequency band.

SAR exclusion calculations for antenna >50mm from the user

| Antenna | Tx Interface | Frequency (MHz) | Output Pow er | | Calculated Threshold Value | | | | | |
|---------|-----------------|--------------------|---------------|----|----------------------------|------|------|-------|-----|----------------------|
| | | | dBm | mW | Front | Rear | Left | Right | Тор | Bottom |
| Main | FM | 526.825 | 15.31 | 34 | N/A | N/A | N/A | N/A | N/A | 355.2 mW -EXEMPT- |

SECTION 7: Description of the Body setup

7.1 Procedure for SAR test position determination

The tested procedure was performed according to the KDB 447498 D01 (Mobile and Portable Device RF Exposure Procedures and Equipment Authorization Policies),

7.2 Test position for Body setup

| No. | Position | Test | Radio microphone |
|-----|----------|----------|------------------|
| | | distance | Tested |
| 1 | Front | 0 mm | \square |
| 2 | Rear | 0 mm | \square |
| 3 | Left | 0 mm | \square |
| 4 | Right | 0 mm | |
| 5 | Тор | 0 mm | \square |
| 6 | Bottom | 0 mm | |

SECTION 8: Description of the operating mode

8.1 Output Power and SAR test required

| Date of Output power measurement April 4, 2024 Temperature / Humidity 23 deg. C / 55 % RH | | | | | | | | | | |
|---|----------------|---|--|-------------------------------|--|--|--|--|--|--|
| Mode | Freq. (MHz) | Tune-up upper Pow er (dBm) (Burst) | Measured average Pow er (dBm) (Burst) | Initial test configuration | | | | | | |
| Radio | 508.125 | 15.31 | 14.10 | | | | | | | |
| microphone | 518.775 | 15.31 | 14.36 | Yes | | | | | | |
| erephone | 526.825 | 15.31 | 14.35 | | | | | | | |

SECTION 9: Test surrounding

9.1 Measurement uncertainty

This measurement uncertainty budget is suggested by IEEE Std 1528(2013) and determined by Schmid & Partner Engineering AG (DASY5/6 Uncertainty Budget). Per KDB 865664 D01 SAR Measurement 100 MHz to 6 GHz Section 2.8.1., when the highest measured SAR(1 g) within a frequency band is < 1.5 W/kg, the extensive SAR measurement uncertainty analysis described in IEEE Std.1528 (2013) is not required in SAR reports submitted for equipment approval.

SECTION 10: Parameter Check

The dielectric parameters were checked prior to assessment using the DAK dielectric probe kit. The dielectric parameters measurement is reported in each correspondent section.

The dielectric parameters is measured within 24 hours before the SAR measurements, and for every 48 hours of continuous use.

According to KDB 865664 D01, +/- 5 % tolerances are required for ε r and σ and then below table which is the target value of the simulated tissue liquid is quoted from KDB 865664 D01.

| Target Frequency | He | ad | Body | | | | |
|------------------|------|----------------|------|---------|--|--|--|
| (MHz) | Er | σ (S/m) | Er | σ (S/m) | | | |
| 150 | 52.3 | 0.76 | 61.9 | 0.80 | | | |
| 300 | 45.3 | 0.87 | 58.2 | 0.92 | | | |

SECTION 11: System Check confirmation

The measurements were performed in the flat section of the TWIN SAM or ELI phantom, shell thickness: 2.0 \pm 0.2 mm (bottom plate) filled with Body or Head simulating liquid of the following parameters.

The depth of tissue-equivalent liquid in a phantom must be ≥ 15.0 cm ± 0.5 cm for SAR measurements ≤ 3 GHz and ≥ 10.0 cm ± 0.5 cm for measurements > 3 GHz.

The DASY system with an E-Field Probe was used for the measurements.

The dipole was mounted on the small tripod so that the dipole feed point was positioned below the center marking of the flat phantom section and the dipole was oriented parallel to the body axis (the long side of the phantom).

The standard measuring distance was 10 mm (above 1 GHz to 6 GHz) and 15 mm (below 1 GHz) from dipole center to the simulating liquid surface.

The coarse grid with a grid spacing of 15 mm (below 2 GHz), 12 mm (2 GHz to 4 GHz) and 10 mm (4 GHz to 6 GHz) was aligned with the dipole.

Around this point found in the coarse grid, a volume of 30 mm x 30 mm x 30 mm or more was assessed by measuring 7 x 7 x 7 points at least for below 3 GHz, a volume of 28 mm x 28 mm x 34 mm or more was assessed by measuring 8 x 8 x 8(ratio step method) points at least for 3 GHz to 5 GHz and a volume of

28 mm x 28 mm x 24 mm or more was assessed by measuring 8 x 8 x 8(ratio step method) points at least for 5 GHz to 6 GHz.

Distance between probe sensors and phantom surface was set to 1.4 mm.

The dipole input power (forward power) was 100 mW or 250 mW.

The results are normalized to 1 W input power.

Target Value

| Freq [MHz] | | Model,S/N | | Head | | |
|---------------|-----|-------------|----------------|------------|-------------|--|
| | | | | (SPEAG) | (SPEAG) | |
| | | | | 1 g [W/kg] | 10 g [W/kg] | |
| | 450 | D450V3,1051 | 450D450V3,1051 | 4.56 | 3.06 | |

The target(reference) SAR values can be obtained from the calibration certificate of system validation dipoles(Refer to Appendix 3). The target SAR values are SAR measured value in the calibration certificate scaled to 1 W.

| | | | T.S. | | Measure | ed Results | Target | |
|-------------|-----------|-------------|------|------|---------|------------|--------------|--------|
| Date Tested | Test Freq | Model,S/N | | | Zoom | Normalize | (Ref. Value) | Delta |
| | | | Liqu | id | Scan | to 1 W | [W/kg] | ± 10 % |
| | | | | | [W/kg] | [W/kg] | [11/1/9] | |
| 2024/4/24 | 450 | D450V3,1051 | Head | 1 g | 1.09 | 4.36 | 4.56 | -4.39 |
| | | | | 10 g | 0.728 | 2.91 | 3.06 | -4.90 |

SECTION 12: Measured and Reported (Scaled) SAR Results

SAR Test Reduction criteria are as follows

KDB 447498 D01 (General RF Exposure Guidance):

Testing of other required channels within the operating mode of a frequency band is not required when the reported 1-g or 10-g SAR for the mid-band or highest output power channel is:

- \Rightarrow \leq 0.8 W/kg or 2.0 W/kg, for 1-g or 10-g respectively, when the transmission band is \leq 100 MHz
- ♦ ≤ 0.6 W/kg or 1.5 W/kg, for 1-g or 10-g respectively, when the transmission band is between 100 MHz and 200 MHz
- ♦ ≤ 0.4 W/kg or 1.0 W/kg, for 1-g or 10-g respectively, when the transmission band is ≥ 200 MHz
- When reported SAR value is exceed 1.2 W/kg(if any), device holder perturbation verification is required; however, since distance between device holder and antenna of EUT is enough, it was not conducted.
- Reported SAR= Measured SAR [W/kg] * Power Scaled factor * Duty Scaled factor Maximum tune-up tolerance limit is by the specification from a customer.
 * Power Scaled factor = Maximum tune-up tolerance limit [mW] / Measured power [mW]
 * Duty Scaled factor = 1 / Duty (%) / 100
- Maximum tune-up tolerance limit is by the specification from a customer.

Note: Measured value is rounded round off to three decimal places

| | | | | Power | (dBm) | Power | | Duty | 1-g SAF | R (W/kg) | |
|---------------|---------------|-------------|----------------|---------------------------|------------------------------|------------------|----------|------------------|---------|----------|----------|

12.1 Result of Body SAR of 519 MHz S-band

12.2 Repeated measurement

According to KDB 865664 D1.

1) Repeated measurement is not required when the original highest measured SAR is < 0.80 W/kg; steps 2) through 4) do not apply.

2) When the original highest measured SAR is \geq 0.80 W/kg, repeat that measurement once.

3) Perform a second repeated measurement only if the ratio of largest to smallest SAR for the original and first repeated measurements is > 1.20 or when the original or repeated measurement is \geq 1.45 W/kg (~ 10 % from the 1-g SAR limit).

4) Perform a third repeated measurement only if the original, first or second repeated measurement is ≥ 1.5 W/kg and the ratio of largest to smallest SAR for the original, first and second repeated measurements is > 1.20.

| Test | Configura | tion | | _ | Meas.SA | AR (W/kg) | Largest to | |
|----------|-----------|---------------|---------------------|----------------|----------|-----------|-----------------------|-------------|
| Exposure | Position | Dist. (mm) | Mode | Freq. (MHz) | Original | Repeated | Smallest SAR Ratio | Plot No. |
| Body | Left | 0 | Radio microphone | 526.825 | 0.197 | N/A | N/A | - |

Note(s):

N/A: Repeated Measurement is not required since the original highest measured SAR for all band is < 0.80 W/kg.

The expiration date of the calibration is the end of the expired month.

All equipment is calibrated with valid calibrations. Each measurement data is traceable to the national or international standards.

As for some calibrations performed after the tested dates, those test equipment have been controlled by means of an unbroken chains of calibrations.

SAR room is checked before every testing and ambient noise is <0.012 W/kg

APPENDIX 1: System Check

System check result Body 450 MHz

Communication System Channel Number: 0; Duty Cycle: 1:1 Medium parameters used: f = 450 MHz; σ = 0.832 S/m; ϵ r = 42.985; ρ = 1000 kg/m³

DASY5 Configuration:

- Area Scan Setting: Find Secondary Maximum Within: 2.0 dB and with a peak SAR value greater than 0.012W/kg

- Electronics: DAE4 Sn509; Calibrated: 2023/08/04 Probe: EX3DV4 SN3922; ConvF(11.23, 11.23, 11.23) @ 450 MHz; Calibrated: 2023/08/11
- Sensor-Surface: 1.4mm (Mechanical Surface Detection)
- Phantom: ELI v4.0 (20deg probe tilt); Phantom section: Flat Section ; Type: QDOVA001BB
- Measurement SW: DASY52, Version 52.10 (4); SEMCAD X Version 14.6.14 (7501)

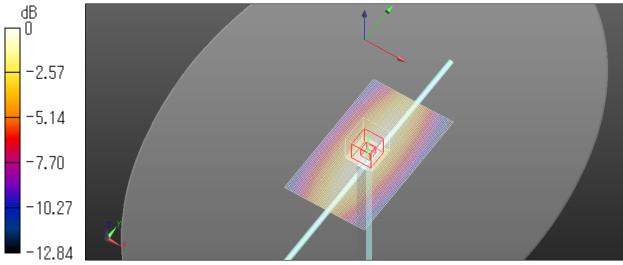

Pin/250 mW/Area Scan (61x101x1): Interpolated grid: dx=1.500 mm, dy=1.500 mm Maximum value of SAR (interpolated) = 1.48 W/kg

Pin/250 mW/Zoom Scan (7x7x7)/Cube 0: Measurement grid: dx= 5mm, dy=5 mm, dz=5 mm Reference Value = 43.56 V/m; Power Drift = 0.03 dB Peak SAR (extrapolated) = 1.70 W/kg SAR(1 g) = 1.09 W/kg; SAR(10 g) = 0.728 W/kg Smallest distance from peaks to all points 3 dB below: Larger than measurement grid (> 15 mm) Ratio of SAR at M2 to SAR at M1 = 64%

Maximum value of SAR (measured) = 1.48 W/kg

Pin/250 mW/Z Scan 2 (1x1x7): Measurement grid: dx=20 mm, dy=20 mm, dz=5 mm Maximum value of SAR (measured) = 1.48 W/kg

Ambient Temp.: 24.0 degree.C. Liquid Temp.; 24.6 degree.C. Liquid temp. is kept within the 2 degree.C. during the test. Date: 2024/04/24

0 dB = 1.48 W/kg = 1.70 dBW/kg

APPENDIX 2: SAR Measurement data

Evaluation procedure

The evaluation was performed with the following procedure:

Step 1: Measurement of the E-field at a fixed location above the ear point or central position of flat phantom was used as a reference value for assessing the power drop.

Step 2: The SAR distribution at the exposed side of head or body position was measured at a distance of each device from the inner surface of the shell. The area covered the entire dimension of the antenna of EUT and the horizontal grid spacing was 15 mm x 15 mm, 12 mm x 12 mm, 10 mm x 10 mm. Based on these data, the area of the maximum absorption was determined by spline interpolation.

Step 3: Around this point found in the Step 2 (area scan), a volume of 30 mm x 30 mm x 30 mm or more was assessed by measuring 7 x 7 x 7 points at least for below 3 GHz, a volume of 28 mm x 28 mm x 34 mm or more was assessed by measuring 8 x 8 x 8(ratio step method (*1)) points at least for 3 GHz to 5 GHz, a volume of 28 mm x 28 mm x 24 mm or more was assessed by measuring 8 x 8 x 8(ratio step method (*1)) points at least for 3 GHz to 5 GHz, a volume of 28 mm x 28 mm x 24 mm or more was assessed by measuring 8 x 8 x 8(ratio step method (*1)) points at least for 3 GHz to 5 GHz, a volume of 28 mm x 28 mm x 24 mm or more was assessed by measuring 8 x 8 x 8(ratio step method) points at least for

5 GHz to 6 GHz.

And for any secondary peaks found in the Step2 which are within 2 dB of maximum peak and not with this Step3 (Zoom scan) is repeated. On the basis of this data set, the spatial peak SAR value was evaluated under the following procedure:

(1). The data at the surface were extrapolated, since the center of the dipoles is 1 mm(EX3DV4) away from the tip of the probe and the distance between the surface and the lowest measuring point is 1.3 mm. The extrapolation was based on a least square algorithm [4]. A polynomial of the fourth order was calculated through the points in z-axes.

This polynomial was then used to evaluate the points between the surface and the probe tip.

(2). The maximum interpolated value was searched with a straightforward algorithm. Around this maximum the SAR values averaged over the spatial volumes (1 g or 10 g) were computed by the 3D-Spline interpolation algorithm. The 3D-Spline is composed of three one-dimensional splines with the "Not a knot"-condition (in x, y and z-directions). The volume was integrated with the trapezoidal-algorithm. One thousand points (10 x 10 x 10) were interpolated to calculate the average.

(3). All neighboring volumes were evaluated until no neighboring volume with a higher average value was found.

*1. Ratio step method parameters used;

The first measurement point: 1.4 mm from the phantom surface, the initial grid separation: 1.4 mm, subsequent graded grid ratio: 1.4

These parameters comply with the requirement of the KDB 865664 D01.

Step 4: Re-measurement of the E-field at the same location as in Step 1.

Confirmation after SAR testing

It was checked that the power drift [W] is within +/-5 %. The verification of power drift during the SAR test is that DASY5 system calculates the power drift by measuring the e-filed at the same location at beginning and the end of the scan measurement for each test position.

DASY5 system calculation Power drift value[dB] =20log(Ea)/(Eb) Before SAR testing : Eb [V/m] After SAR testing : Ea [V/m]

Limit of power drift[W] = +/- 5 % X[dB] = $10\log[P] = 10\log(1.05/1) = 10\log(1.05)$ - $10\log(1) = 0.212$ dB

from E-filed relations with power. p=E^2/\eta Therefore, The correlation of power and the E-filed

 $X dB = 10log(P) = 10log(E)^2 = 20log(E)$

Therefore, The calculated power drift of DASY5 System must be the less than +/- 0.212 dB.

APPENDIX 3: System specifications

Configuration and peripherals

The DASY5 system for performing compliance tests consist of the following items: Our system is DASY6; however, it behaves as DASY5.

- a) A standard high precision 6-axis robot (Stäubli RX family) with controller and software. An arm extension for accommodating the data acquisition electronics (DAE).
- b) An isotropic field probe optimized and calibrated for the targeted measurement.
- c) A data acquisition electronic (DAE), which performs the signal amplification, signal multiplexing, AD-conversion, offset measurements, mechanical surface detection, collision detection, etc. The unit is battery powered with standard or rechargeable batteries. The signal is optically transmitted to the EOC.
- d) The Electro-optical converter (EOC) performs the conversion between optical and electrical of the signals for the digital communication to the DAE and for the analog signal from the optical surface detection.

The EOC is connected to the measurement server.

- e) The function of the measurement server is to perform the time critical tasks such as signal filtering, control of the robot operation and fast movement interrupts.
- f) The Light Beam used is for probe alignment. This improves the (absolute) accuracy of the probe positioning.
- g) A computer running Windows 10 or 7 and the DASY5/6 software.

h) Remote control with teaches pendant and additional circuitry for robot safety such as warning lamps, etc.

i) The phantom, the device holder and other accessories according to the targeted measurement.

Specifications

| a) Robot TX60L Number of Axes | | |

i) Phantom and Device Holder

| <u>Phantom</u> Type Description Mannequin | : | SAM Twin Phantom V4.0 The shell corresponds to the specifications of the Specific Anthropomorphic (SAM) phantom defined in IEEE 1528 and IEC 62209-1. It enables the dosimetric evaluation of left and right hand phone usage as well as body mounted usage at the flat phantom region. A cover prevents evaporation of the liquid. Reference markings on the phantom allow the complete setup of all predefined phantom positions and measurement grids by teaching three points with the robot. |
|--|------------------|---|
| Material | : | Vinylester, glass fiber reinforced (VE-GF) |
| Shell Material Thickness | : | Fiberglass 2.0 +/- 0.2 mm |
| Dimensions | : | Length: 1000 mm Width: 500 mm Height: adjustable feet |
| Volume | : | Approx. 25 liters |
| Manufacture | : | Schmid & Partner Engineering AG |
| Type Description | :: | 2 mm Flat phantom ELI4.0 or 5 Phantom for compliance testing of handheld and body-mounted wireless devices in the frequency range of 30 MHz to 6 GHz. ELI4 is fully compatible with the latest draft of the standard IEC 62209 Part II and all known tissue simulating liquids. ELI4 has been optimized regarding its performance and can be integrated into our standard phantom tables. A cover prevents evaporation of the liquid. Reference markings on the phantom allow installation of the complete setup, including all predefined phantom positions and measurement grids, by teaching three points. The phantom is supported by software version DASY4.5 and higher and is compatible with all SPEAG dosimetric probes and dipoles. |
| Material Shell Thickness Filling Volume Dimensions Manufacture | : : : : | Vinylester, glass fiber reinforced (VE-GF) 2.0 ± 0.2 mm (sagging: < 1 %) Approx. 30 liters Major ellipse axis: 600 mm Minor axis: 400 mm Schmid & Partner Engineering AG |

Device Holder

In combination with the Twin SAM Phantom V4.0/V4.0c or ELI4, the Mounting Device enables the rotation of the mounted transmitter device in spherical coordinates. Rotation point is the ear opening point. Transmitter devices can be easily and accurately positioned according to IEC, IEEE, FCC or other specifications. The device holder can be locked for positioning at different phantom sections (left head, right head, flat).
Material : POM

Laptop Extensions kit

Simple but effective and easy-to-use extension for Mounting Device that facilitates the testing of larger devices according to IEC 62209-2 (e.g., laptops, cameras, etc.). It is lightweight and fits easily on the upper part of the Mounting Device in place of the phone positioner. The extension is fully compatible with the Twin-SAM, ELI4 Phantoms.

Material : POM, Acrylic glass, Foam

Urethane

For this measurement, the urethane foam was used as device holder.

j) Simulated Tissues (Liquid)

The following tissue formulations are provided for reference only as some of the parameters have not been thoroughly verified. The composition of ingredients may be modified accordingly to achieve the desired target tissue parameters required for routine SAR evaluation.

Calibration Laboratory of Schmid & Partner Engineering AG Zeughausstrasse 43, 8004 Zurich, Switzerland

Schweizerischer Kalibrierdienst Service suisse d'étalonnage Servizio svizzero di taratura Swiss Calibration Service

s

С

S

Accreditation No.: SCS 0108

Accredited by the Swiss Accreditation Service (SAS) The Swiss Accreditation Service is one of the signatories to the EA Multilateral Agreement for the recognition of calibration certificates

Glossary:

| TSL | tissue simulating liquid |
|-------|---------------------------------|
| ConvF | sensitivity in TSL / NORM x,y,z |
| N/A | not applicable or not measured |

Calibration is Performed According to the Following Standards:

- a) IEC/IEEE 62209-1528, "Measurement Procedure For The Assessment Of Specific Absorption Rate Of Human Exposure To Radio Frequency Fields From Hand-Held And Body-Worn Wireless Communication Devices - Part 1528: Human Models, Instrumentation And Procedures (Frequency Range of 4 MHz to 10 GHz)", October 2020.
- b) KDB 865664, "SAR Measurement Requirements for 100 MHz to 6 GHz"

Additional Documentation:

c) DASY System Handbook

Methods Applied and Interpretation of Parameters:

- Measurement Conditions: Further details are available from the Validation Report at the end
 of the certificate. All figures stated in the certificate are valid at the frequency indicated.
- Antenna Parameters with TSL: The source is mounted in a touch configuration below the center marking of the flat phantom.
- Return Loss: This parameter is measured with the source positioned under the liquid filled phantom (as described in the measurement condition clause). The Return Loss ensures low reflected power. No uncertainty required.
- SAR measured: SAR measured at the stated antenna input power.
- SAR normalized: SAR as measured, normalized to an input power of 1 W at the antenna connector.
- SAR for nominal TSL parameters: The measured TSL parameters are used to calculate the nominal SAR result.

The reported uncertainty of measurement is stated as the standard uncertainty of measurement multiplied by the coverage factor k=2, which for a normal distribution corresponds to a coverage probability of approximately 95%.

Certificate No: D450V3-1051_Sep21

Page 2 of 8

Measurement Conditions

DASY system configuration, as far as not given on page 1.

| DASY Version | DASY52 | V52.10.4 |
|------------------------------|------------------------|-----------------------------|
| Extrapolation | Advanced Extrapolation | |
| Phantom | ELI4 Flat Phantom | Shell thickness: 2 ± 0.2 mm |
| Distance Dipole Center - TSL | 15 mm | with Spacer |
| Zoom Scan Resolution | dx, dy, dz = 5 mm | |
| Frequency | 450 MHz ± 1 MHz | |

Head TSL parameters

The following parameters and calculations were applied.

| | Temperature | Permittivity | Conductivity |
|---|-----------------|--------------|------------------|
| Nominal Head TSL parameters | 22.0 °C | 43.5 | 0.87 mho/m |
| Measured Head TSL parameters | (22.0 ± 0.2) °C | 42.8 ± 6 % | 0.86 mho/m ± 6 % |
| Head TSL temperature change during test | < 0.5 °C | | |

SAR result with Head TSL

| SAR averaged over 1 cm ³ (1 g) of Head TSL | Condition | |
|---|--------------------|--------------------------|
| SAR measured | 250 mW input power | 1.14 W/kg |
| SAR for nominal Head TSL parameters | normalized to 1W | 4.59 W/kg ± 18.1 % (k=2) |

| SAR averaged over 10 cm ³ (10 g) of Head TSL | condition | |
|---|--------------------|--------------------------|
| SAR measured | 250 mW input power | 0.764 W/kg |
| SAR for nominal Head TSL parameters | normalized to 1W | 3.07 W/kg ± 17.6 % (k=2) |

Body TSL parameters The following parameters and calculations were applied.

| | Temperature | Permittivity | Conductivity |
|---|-----------------|--------------|------------------|
| Nominal Body TSL parameters | 22.0 °C | 56.7 | 0.94 mho/m |
| Measured Body TSL parameters | (22.0 ± 0.2) °C | 55.9 ± 6 % | 0.95 mho/m ± 6 % |
| Body TSL temperature change during test | < 0.5 °C | | |

SAR result with Body TSL

| SAR averaged over 1 cm ³ (1 g) of Body TSL | Condition | |
|---|---------------------------------|--------------------------|
| SAR measured | 250 mW input power | 1.18 W/kg |
| SAR for nominal Body TSL parameters | normalized to 1W | 4.67 W/kg ± 18.1 % (k=2) |
| | | |
| SAR averaged over 10 cm ³ (10 g) of Body TSL | condition | |
| SAR averaged over 10 cm ³ (10 g) of Body TSL SAR measured | condition 250 mW input power | 0.795 W/kg |

Certificate No: D450V3-1051_Sep21

Page 3 of 8

.

Appendix (Additional assessments outside the scope of SCS 0108)

Antenna Parameters with Head TSL

| Impedance, transformed to feed point | 56.0 Ω - 6.8 jΩ |
|--------------------------------------|-----------------|
| Return Loss | - 21.4 dB |

Antenna Parameters with Body TSL

| Impedance, transformed to feed point | 53.0 Ω - 9.5 jΩ |
|--------------------------------------|-----------------|
| Return Loss | - 20.3 dB |

General Antenna Parameters and Design

| Electrical Delay (one direction) | 1.350 ns |
|----------------------------------|-----------|
| | 1.350 115 |
| | |

After long term use with 100W radiated power, only a slight warming of the dipole near the feedpoint can be measured.

The dipole is made of standard semirigid coaxial cable. The center conductor of the feeding line is directly connected to the second arm of the dipole. The antenna is therefore short-circuited for DC-signals. On some of the dipoles, small end caps are added to the dipole arms in order to improve matching when loaded according to the position as explained in the "Measurement Conditions" paragraph. The SAR data are not affected by this change. The overall dipole length is still according to the Standard.

No excessive force must be applied to the dipole arms, because they might bend or the soldered connections near the feedpoint may be damaged.

Additional EUT Data

| Manufactured by | SPEAG |

DASY5 Validation Report for Head TSL

Date: 17.09.2021

Test Laboratory: SPEAG, Zurich, Switzerland

DUT: Dipole 450 MHz; Type: D450V3; Serial: D450V3 - SN:1051

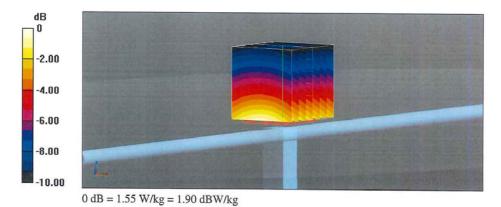

Communication System: UID 0 - CW; Frequency: 450 MHz Medium parameters used: f = 450 MHz; σ = 0.86 S/m; ε_r = 42.8; ρ = 1000 kg/m³ Phantom section: Flat Section Measurement Standard: DASY5 (IEEE/IEC/ANSI C63.19-2011)

DASY52 Configuration:

- Probe: EX3DV4 SN3877; ConvF(10.64, 10.64, 10.64) @ 450 MHz; Calibrated: 30.12.2020
- Sensor-Surface: 1.4mm (Mechanical Surface Detection)
- Electronics: DAE4 Sn654; Calibrated: 28.06.2021
- Phantom: ELI v4.0; Type: QDOVA001BB; Serial: TP:1003
- DASY52 52.10.4(1535); SEMCAD X 14.6.14(7501)

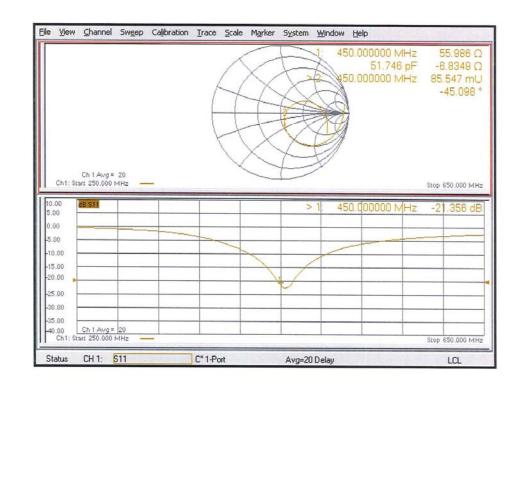

Dipole Calibration for Head Tissue/d=15mm, Pin=250mW/Zoom Scan (7x7x7)/Cube 0:

Measurement grid: dx=5mm, dy=5mm, dz=5mm Reference Value = 39.24 V/m; Power Drift = -0.00 dB Peak SAR (extrapolated) = 1.78 W/kg **SAR(1 g) = 1.14 W/kg; SAR(10 g) = 0.764 W/kg** Smallest distance from peaks to all points 3 dB below: Larger than measurement grid (> 30 mm) Ratio of SAR at M2 to SAR at M1 = 64.2% Maximum value of SAR (measured) = 1.55 W/kg

Calibration Laboratory of Schmid & Partner Engineering AG Zeughausstrasse 43, 8004 Zurich, Switzerland

- S Schweizerischer Kalibrierdienst Service suisse d'étalonnage
- C Service suisse d'étalonnage Servizio svizzero di taratura
- S Swiss Calibration Service

Accreditation No.: SCS 0108

Accredited by the Swiss Accreditation Service (SAS) The Swiss Accreditation Service is one of the signatories to the EA Multilateral Agreement for the recognition of calibration certificates

.

Glossary

| 0 is |
|------|
| |
| |
| 0 |

Calibration is Performed According to the Following Standards:

- a) IEC/IEEE 62209-1528, "Measurement Procedure For The Assessment Of Specific Absorption Rate Of Human Exposure To Radio Frequency Fields From Hand-Held And Body-Worn Wireless Communication Devices – Part 1528: Human Models, Instrumentation And Procedures (Frequency Range of 4 MHz to 10 GHz)", October 2020.
- b) KDB 865664, "SAR Measurement Requirements for 100 MHz to 6 GHz"

Methods Applied and Interpretation of Parameters:

- NORMx,y,z: Assessed for E-field polarization ∂ = 0 (f ≤ 900MHz in TEM-cell; f > 1800MHz: R22 waveguide). NORMx,y,z are only intermediate values, i.e., the uncertainties of NORMx,y,z does not affect the E²-field uncertainty inside TSL (see below ConvF).
- NORM(f)x,y,z = NORMx,y,z * frequency_response (see Frequency Response Chart). This linearization is implemented in DASY4 software versions later than 4.2. The uncertainty of the frequency response is included in the stated uncertainty of ConvF.
- DCPx,y,z: DCP are numerical linearization parameters assessed based on the data of power sweep with CW signal. DCP
 does not depend on frequency nor media.
- PAR: PAR is the Peak to Average Ratio that is not calibrated but determined based on the signal characteristics
- Ax,y,z; Bx,y,z; Cx,y,z; Dx,y,z; VRx,y,z: A, B, C, D are numerical linearization parameters assessed based on the data of
 power sweep for specific modulation signal. The parameters do not depend on frequency nor media. VR is the maximum
 calibration range expressed in RMS voltage across the diode.
- ConvF and Boundary Effect Parameters: Assessed in flat phantom using E-field (or Temperature Transfer Standard for $f \le 800 \text{ MHz}$) and inside waveguide using analytical field distributions based on power measurements for f > 800 MHz. The same setups are used for assessment of the parameters applied for boundary compensation (alpha, depth) of which typical uncertainty values are given. These parameters are used in DASY4 software to improve probe accuracy close to the boundary. The sensitivity in TSL corresponds to NORMx, y, z * ConvF whereby the uncertainty corresponds to that given for ConvF. A frequency dependent ConvF is used in DASY4 version 4.4 and higher which allows extending the validity from $\pm 50 \text{ MHz}$ to $\pm 100 \text{ MHz}$.
- Spherical isotropy (3D deviation from isotropy): in a field of low gradients realized using a flat phantom exposed by a patch antenna.
- Sensor Offset: The sensor offset corresponds to the offset of virtual measurement center from the probe tip (on probe axis). No tolerance required.
- · Connector Angle: The angle is assessed using the information gained by determining the NORMx (no uncertainty required).

| | | Z | 4.83 | 65.49 | 15.44 | 1 | 150.0 | 1 | |

Note: For details on UID parameters see Appendix

The reported uncertainty of measurement is stated as the standard uncertainty of measurement multiplied by the coverage factor k=2, which for a normal distribution corresponds to a coverage probability of approximately 95%.

^A The uncertainties of Norm X,Y,Z do not affect the E²-field uncertainty inside TSL (see Pages 5 and 6).
 ^B Linearization parameter uncertainty for maximum specified field strength.
 ^E Uncertainty is determined using the max. deviation from linear response applying rectangular distribution and is expressed for the square of the field value.

Calibration Parameter Determined in Head Tissue Simulating Media

| f (MHz) ^C | Relative Permittivity ^F | Conductivity ^F (S/m) | ConvF X | ConvF Y | ConvF Z | Alpha ^G | Depth ^G (mm) | Unc (k = 2) |
|----------------------|---------------------------------------|------------------------------------|---------|---------|---------|--------------------|----------------------------|----------------|
| 450 | 43.5 | 0.87 | 11.23 | 11.23 | 11.23 | 0.16 | 1.30 | ±13.3% |
| 600 | 42.7 | 0.88 | 10.53 | 10.53 | 10.53 | 0.10 | 1.25 | ±13.3% |
| 900 | 41.5 | 0.97 | 9.92 | 9.92 | 9.92 | 0.46 | 0.82 | ±12.0% |
| 2450 | 39.2 | 1.80 | 7.88 | 7.88 | 7.88 | 0.36 | 0.90 | ±12.0% |
| 5250 | 35.9 | 4.71 | 5.54 | 5.54 | 5.54 | 0.40 | 1.80 | ±14.0% |
| 5600 | 35.5 | 5.07 | 4.72 | 4.72 | 4.72 | 0.40 | 1.80 | ±14.0% |
| 5800 | 35.3 | 5.27 | 4.86 | 4.86 | 4.86 | 0.40 | 1.80 | ±14.0% |

^C Frequency validity above 300 MHz of ±100 MHz only applies for DASY v4.4 and higher (see Page 2), else it is restricted to ±50 MHz. The uncertainty is the RSS of the ConvF uncertainty at calibration frequency and the uncertainty for the indicated frequency band. Frequency validity below 300 MHz is ±10, 25, 40, 50 and 70 MHz for ConvF assessments at 30, 64, 128, 150 and 220 MHz respectively. Validity of ConvF assessed at 6 MHz is \pm -9 MHz, and ConvF assessed at 13 MHz is \pm -19 MHz. Above 5 GHz frequency validity can be extended to ±110 MHz. ^F The probes are calibrated using tissue simulating liquids (TSL) that deviate for *z* and σ by less than ±5% from the target values (typically better than ±3%) and are valid for TSL with deviations of up to ±10%. If TSL with deviations form the target of less than ±5% are used, the calibration uncertainties are 11.1% for 0.7 - 3 GHz and 13.1% for 3 - 6 GHz.

G Alpha/Depth are determined during calibration. SPEAG warrants that the remaining deviation due to the boundary effect after compensation is always less than ±1% for frequencies below 3 GHz and below ±2% for frequencies between 3-6 GHz at any distance larger than half the probe tip diameter from the boundary.

| 450 | 56.7 | 0.94 | 11.48 | 11.48 | 11.48 | 0.11 | 1.20 | ±13.3% |
| 600 | 56.1 | 0.95 | 10.88 | 10.88 | 10.88 | 0.10 | 1.35 | ±13.3% |
| 2450 | 52.7 | 1.95 | 7.66 | 7.66 | 7.66 | 0.33 | 0.90 | ±12.0% |
| 5250 | 48.9 | 5.36 | 4.77 | 4.77 | 4.77 | 0.50 | 1.90 | ±14.0% |
| 5600 | 48.5 | 5.77 | 4.11 | 4.11 | 4.11 | 0.50 | 1.90 | ±14.0% |
| 5800 | 48.2 | 6.00 | 4.18 | 4.18 | 4.18 | 0.50 | 1.90 | ±14.0% |

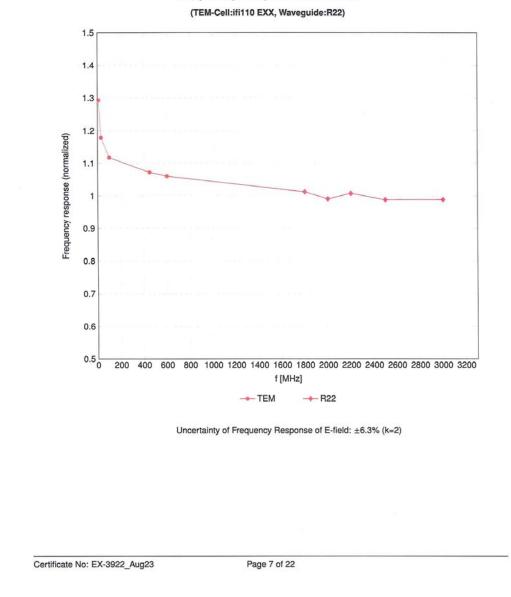

^C Frequency validity above 300 MHz of ± 100 MHz only applies for DASY v4.4 and higher (see Page 2), else it is restricted to ± 50 MHz. The uncertainty is the RSS of the ConvF uncertainty at calibration frequency and the uncertainty for the indicated frequency band. Frequency validity below 300 MHz is $\pm 10, 25, 40, 50$ and 70 MHz for ConvF assessments at 30, 64, 128, 150 and 220 MHz respectively. Validity of ConvF assessed at 6 MHz is 4-9 MHz, and ConvF assessed at 13 MHz is 9-19 MHz. Above 5 GHz frequency validity can be extended to ± 110 MHz. ^F The probes are calibrated using tissue simulating liquids (TSL) that deviate for *c* and *σ* by less than $\pm 5\%$ from the target values (typically better than $\pm 3\%$) and are valid for TSL with deviations of up to $\pm 10\%$. If TSL with deviations from the target of less than $\pm 5\%$ are used, the calibration uncertainties are 11.1% for 0.7 - 3 GHz and 13.1% for 3 - 6 GHz.

 $tan \pm 1\%$ for frequencies below 3 GHz and below $\pm 2\%$ for frequencies between 3–6 GHz at any distance larger than half the probe tip diameter from the boundary.

System check uncertainty

The uncertainty budget has been determined for the DASY5 measurement system according to the SPEAG documents and is given in the following Table.

Repeatability Budget for System Check

<0.3 to 3 GHz range Body>

| Error Description | Uncertainty value ± % | Probability distribution | divisor | (ci) 1g | (ci) 10g | Standard Uncertainty (1g) % | Standard Uncertainty (10g) % | |
|------------------------------------|--------------------------|-----------------------------|---------|------------|-------------|-----------------------------------|------------------------------------|------|
| Measurement Syster | n | | | | | | · | |
