### **Accredited Testing Laboratory:**

The testing laboratory (area of testing) is accredited according to DIN EN ISO/IEC 17025 (2005) by the Deutsche Akkreditierungsstelle GmbH (DAkkS)

The accreditation is valid for the scope of testing procedures as stated in the accreditation certificate with

the registration number: D-PL-12076-01-03

### **Applicant**

#### Audio-Technica Corp.

#### Manufacturer

### Audio-Technica Corp.

2-46-1 Nishi-naruse, Machida 194-8666 Tokyo / JAPAN

#### Test standard/s

47 CFR Part 74 Title 47 of the Code of Federal Regulations; Chapter I; Part 74 - Experimental radio,

auxiliary, special broadcast and other program distributional services

For further applied test standards please refer to section 3 of this test report.

Test Item

Kind of test item: Handheld Transmitter

 Model name:
 ATW-T5202DE1

 FCC ID:
 JFZT5202DE1

 IC:
 1752B-T5202DE1

Frequency: DE1: 470.125 MHz – 590 MHz

Technology tested: proprietary
Antenna: Helical antenna

Power supply: 2.4 V to 3.0 V DC by 2 x AA batteries

Temperature range: -10°C to +45°C

### 2 General information

### 2.1 Notes and disclaimer

The test results of this test report relate exclusively to the test item specified in this test report. CTC advanced GmbH does not assume responsibility for any conclusions and generalizations drawn from the test results with regard to other specimens or samples of the type of the equipment represented by the test item.

The test report may only be reproduced or published in full. Reproduction or publication of extracts from the report requires the prior written approval of CTC advanced GmbH.

The testing service provided by CTC advanced GmbH has been rendered under the current "General Terms and Conditions for CTC advanced GmbH".

CTC advanced GmbH will not be liable for any loss or damage resulting from false, inaccurate, inappropriate or incomplete product information provided by the customer.

Under no circumstances does the CTC advanced GmbH test report include any endorsement or warranty regarding the functionality, quality or performance of any other product or service provided.

Under no circumstances does the CTC advanced GmbH test report include or imply any product or service warranties from CTC advanced GmbH, including, without limitation, any implied warranties of merchantability, fitness for purpose, or non-infringement, all of which are expressly disclaimed by CTC advanced GmbH.

All rights and remedies regarding vendor's products and services for which CTC advanced GmbH has prepared this test report shall be provided by the party offering such products or services and not by CTC advanced GmbH. In no case this test report can be considered as a Letter of Approval.

This test report is electronically signed and valid without handwritten signature. For verification of the electronic signatures, the public keys can be requested at the testing laboratory.

## 6 Description of the test setup

Typically, the calibrations of the test apparatus are commissioned to and performed by an accredited calibration laboratory. The calibration intervals are determined in accordance with the DIN EN ISO/IEC 17025. In addition to the external calibrations, the laboratory executes comparison measurements with other calibrated test systems or effective verifications. Weekly chamber inspections and range calibrations are performed. Where possible, RF generating and signaling equipment as well as measuring receivers and analyzers are connected to an external high-precision 10 MHz reference (GPS-based or rubidium frequency standard).

In order to simplify the identification of the equipment used at some special tests, some items of test equipment and ancillaries can be provided with an identifier or number in the equipment list below (Lab/Item).

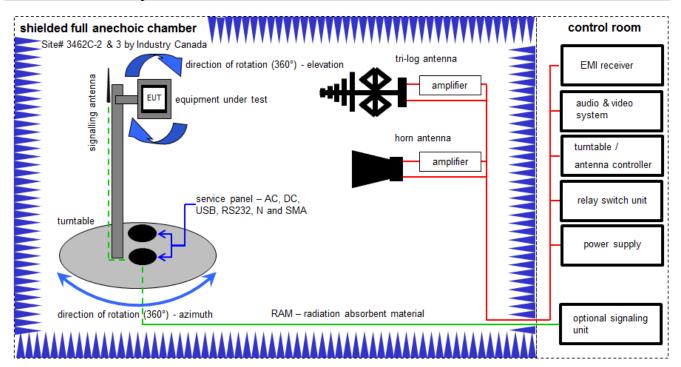

### Agenda: Kind of Calibration

| k<br>ne | calibration / calibrated not required (k, ev, izw, zw not required) | EK<br>zw | limited calibration cyclical maintenance (external cyclical maintenance) |
|---------|---|----------|--|
| ev      | periodic self verification  | izw      | internal cyclical maintenance  |
| Ve      | long-term stability recognized                                      | g        | blocked for accredited testing   |
| vlkl!   | Attention: extended calibration interval                            |          |  |
| NK!     | Attention: not calibrated   | *)       | next calibration ordered / currently in progress                         |

© CTC advanced GmbH Page 6 of 35

## 6.1 Shielded fully anechoic chamber

Measurement distance: tri-log antenna and horn antenna 3 meter

OP = AV + D - G + CA

(OP-radiated output power; AV-analyzer value; D-free field attenuation of measurement distance; G-antenna gain+amplifier gain; CA-loss signal path)

### Example calculation:

 $OP [dBm] = -65.0 [dBm] + 50 [dB] - 20 [dBi] + 5 [dB] = -30 [dBm] (1 \mu W)$

## 7 Sequence of testing

## 7.1 Sequence of testing radiated spurious 30 MHz to 1 GHz

### Setup

- The equipment is set up to simulate normal operation mode as described in the user manual or defined by the manufacturer.
- If the EUT is a tabletop system, a table with 0.8 m height is used, which is placed on the ground plane.
- If the EUT is a floor standing device, it is placed on the ground plane with insulation between both.
- Auxiliary equipment and cables are positioned to simulate normal operation conditions as described in ANSI C 63.4.
- The AC power port of the EUT (if available) is connected to a power outlet below the turntable.
- Measurement distance is 10 m or 3 m (see ANSI C 63.4) see test details.
- EUT is set into operation.

#### **Premeasurement**

- The turntable rotates from 0° to 315° using 45° steps.
- The antenna is polarized vertical and horizontal.
- The antenna height changes from 1 m to 3 m.
- At each turntable position, antenna polarization and height the analyzer sweeps three times in peak to find the maximum of all emissions.

### Final measurement

- The final measurement is performed for at least six highest peaks according to the requirements of the ANSI C63.4.
- Based on antenna and turntable positions at which the peak values are measured the software maximize the peaks by changing turntable position ± 45° and antenna height between 1 and 4 m.
- The final measurement is done with quasi-peak detector (as described in ANSI C 63.4).
- Final levels, frequency, measuring time, bandwidth, antenna height, antenna polarization, turntable angle, correction factor, margin to the limit and limit are recorded. A plot with the graph of the premeasurement with marked maximum final results and the limit is stored.

## 7.2 Sequence of testing radiated spurious 1 GHz to 4 GHz

### Setup

- The equipment is set up to simulate normal operation mode as described in the user manual or defined by the manufacturer.
- If the EUT is a tabletop system, a 2-axis positioner with 1.5 m height is used.
- If the EUT is a floor standing device, it is placed directly on the turn table.
- Auxiliary equipment and cables are positioned to simulate normal operation conditions as described in ANSI C 63.4.
- The AC power port of the EUT (if available) is connected to a power outlet below the turntable.
- Measurement distance is 3 m (see ANSI C 63.4) see test details.
- EUT is set into operation.

#### **Premeasurement**

- The turntable rotates from 0° to 315° using 45° steps.
- The antenna is polarized vertical and horizontal.
- The antenna height is 1.5 m.
- At each turntable position and antenna polarization the analyzer sweeps with positive peak detector to find the maximum of all emissions.

#### **Final measurement**

- The final measurement is performed for at least six highest peaks according to the requirements of the ANSI C63.4.
- Based on antenna and turntable positions at which the peak values are measured the software maximizes the peaks by rotating the turntable from 0° to 360°. This measurement is repeated for different EUT-table positions (0° to 150° in 30°-steps) and for both antenna polarizations.
- The final measurement is done in the position (turntable, EUT-table and antenna polarization) causing the highest emissions with Peak and RMS detector (as described in ANSI C 63.4).
- Final levels, frequency, measuring time, bandwidth, turntable position, EUT-table position, antenna polarization, correction factor, margin to the limit and limit are recorded. A plot with the graph of the premeasurement with marked maximum final results and the limit is stored.

# 11.2 Occupied bandwidth

### **Measurement:**

| Measurement parameter    |  |  |  |
|--------------------------|--|--|--|
| Detector:                | Peak   |  |  |
| Sweep time:              | Auto   |  |  |
| Resolution bandwidth:    | 1 % to 5 % of the occupied bandwidth           |  |  |
| Video bandwidth:         | 3 x resolution bandwidth                       |  |  |
| Span:                    | 2 x emission bandwidth                         |  |  |
| Trace mode:              | Max. hold                                      |  |  |
| Analyzer function:       | 99% power occupied bandwidth function          |  |  |
| EUT:                     | Modulated signal with max. frequency deviation |  |  |
| Test setup:              | See sub clause 6.2 - A                         |  |  |
| Measurement uncertainty: | See sub clause 8                               |  |  |

### Limits:

| FCC                        |
|----------------------------|
| 470 MHz to 608 MHz 200 kHz |
| 614 MHz to 698 MHz 200 kHz |
| O                          |

Occupied bandwidth 99%. Other than single sideband or independent sideband transmitters - when modulated by a 2500 Hz tone at an input level 16 dB greater than that necessary to produce 50 percent modulation. The input level shall be established at the frequency of maximum response of the audio modulating circuit.

## Result:

| Occupied bandwidth |             |           |  |
|--------------------|-------------|-----------|--|
| Channels           |             |           |  |
|                    | 470.125 MHz | 96.20 kHz |  |

### 11.5 Modulation characteristics

### Method of measurement:

The audio frequency response was measured in accordance with EIA/TIA 603. The plots shows 10 curves with different modulation levels, the test frequency is varied from 15 Hz to 20 kHz.

### Plots:

Plot 1: 10 curves with voltage and frequency variation, 530 MHz (valid for all channels)

## Annex C Accreditation Certificate

| first page  | last page  |
|---|--|
| Deutsche Akkreditierungsstelle GmbH  Entrusted according to Section 8 subsection 1 AkkStelleG in connection with Section 1 subsection 1 AkkStelleGBV Signatory to the Multilateral Agreements of EA, ILAC and IAF for Mutual Recognition  Accreditation  The Deutsche Akkreditierungsstelle GmbH attests that the testing laboratory  CTC advanced GmbH  Untertürkheimer Straße 6-10, 66117 Saarbrücken  is competent under the terms of DIN EN ISO/IEC 17025:2005 to carry out tests in the following fields:  Telecommunication | Deutsche Akkreditierungsstelle GmbH  Office Berlin Spittelmarkt 10 10117 Berlin G0327 Frankfurt am Main G0ffice Braunschweig Bundesallee 100 38116 Braunschweig Bundesallee 100 38116 Braunschweig  The publication of extracts of the accreditation certificate is subject to the prior written approval by Deutsche Akkreditierungsstelle GmbH (Dakks). Exempted is the unchanged form of separate diszeminations of the cover sheet by the conformity assessment body mentioned overfeaf.  No impression shall be made that the accreditation also extends to fields beyond the scope of accreditation attested by Dakks.   |
| The accreditation certificate shall only apply in connection with the notice of accreditation of 02.06.2017 with the accreditation number D-PL-12076-01 and is valid until 21.04.2021. It comprises the cover sheet, the reverse side of the cover sheet and the following annex with a total of 43 pages.  Registration number of the certificate: D-PL-12076-01-03  | The accreditation was granted pursuant to the Act on the Accreditation Book/RASSelBeQ of 31, July 2009 (Federal Law Gazette Jr. 2053) and the Regulation (EQ No PS6/2008) of the European Parliament and of the Council of 9 July 2008 setting out the requirements for accreditation and market surveillance relating to the marketing of products (Official Journal of the European Indon 1.218 of 9 July 2008, p. 30), DAMS is a signatory to the Mutilateral Agreements for Mutual Recognition of the European co-operation for Accreditation (EA), International Laboratory Accreditation Cooperation (EA). The signatories to these agreements recognise each other's accreditations.  The up-to-date state of membership can be retrieved from the following websites:  EA: www.uropean-accreditation.org ILAC: www.llac.org ILAF: www.llac.org |
| Frankfurt, 02.06.2027 Display (174) in a plane visible of Obelian States  |  |

Note: The current certificate annex is published on the website (link see below) of the Accreditation Body DAkkS or may be received by CTC advanced GmbH on request
