To: American Certification Body Reviewer

Re: FCC ID number JI9-F22-6D

Dear Reviewer:

The above-referenced product contains a PLL-based synthesizer capable of producing any frequency in the range 425.24 to 435.00 MHz. Products will be assigned a frequency in this range at the time of manufacture; users do not set the frequency. The software used to program the EEPROM runs on a Windows-based PC with a parallel port and can only set the frequency in the range given above.

Sincerely,

A handwritten signature in black ink that reads "Steven C. Habisohn". The signature is fluid and cursive, with "Steven C." on the top line and "Habisohn" on the bottom line.

Steven C. Habisohn
