Keyboard Usage Tips

Some studies suggest that long periods of repetitive motion, improper workstation set up or incorrect body position may be linked to serious injury. If you experience any discomfort in your hands, wrists, arms, neck or back it is your responsibility to consult a qualified health professional. To reduce the risks of such injuries follow these precautions:

- Take breaks frequently. Experts suggest taking at least one 5-10 minute break every hour.
- Avoid prolonged, repetitive tasks. Vary your tasks throughout the day.
- Assess your workstation and position frequently used items close to you.
- Maintain proper shoulder, elbow and wrist alignment. Shoulders should be relaxed with elbows at your side and wrists should be kept straight.
