Transmitter Certification

of

Model: Outdoor Intercom
FCC ID: JLFODI1

to

Federal Communications Commission

Rule Part(s) 15.249

Date Of Report: March 24, 2006
Revised: May 30, 2006

On the Behalf of the Applicant:

International Electronics Inc.

At the Request of:

P.O. 13653

International Electronics Inc.
5913-C NE 127th Ave, Suite 800
Vancouver, WA 98682

Attention of:

Shary Nassimi, President
(360) 241-9090
email: iei@nmlink.com

Supervised By:

David E. Lee, FCC/IC Compliance Manager

The Applicant has been cautioned as to the following:

15.21 Information to User.

The users manual or instruction manual for an intentional radiator shall caution the user that changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

15.27(a) Special Accessories.

Equipment marketed to a consumer must be capable of complying with the necessary regulations in the configuration in which the equipment is marketed. Where special accessories, such as shielded cables and/or special connectors are required to enable an unintentional or intentional radiator to comply with the emission limits in this part, the equipment must be marketed with, i.e. shipped and sold with, those special accessories. However, in lieu of shipping or packaging the special accessories with the unintentional or intentional radiator, the responsible party may employ other methods of ensuring that the special accessories are provided to the consumer, without additional charge.

Information detailing any alternative method used to supply the special accessories for a grant of equipment authorization or retained in the verification records, as appropriate. The party responsible for the equipment, as detailed in § 2.909 of this chapter, shall ensure that these special accessories are provided with the equipment. The instruction manual for such devices shall include appropriate instructions on the first page of text concerned with the installation of the device that these special accessories must be used with the device. It is the responsibility of the user to use the needed special accessories supplied with the equipment.

Standard Test Conditions And Engineering Practices

Except as noted herein, the following conditions and procedures were observed during the testing:

In accordance with ANSIC63.4-1992/2003, and unless otherwise indicated in the specific measurement results, the ambient temperature of the actual EUT was maintained within the range of 10° to 40°C (50° to 104 °F) unless the particular equipment requirements specify testing over a different temperature range. Also, unless otherwise indicated, the humidity levels were in the range of 10% to 90% relative humidity.

Prior to testing, the EUT was tuned up in accordance with the manufacturer's alignment procedures. All external gain controls were maintained at the position of maximum and/or optimum gain throughout the testing.

Measurement results, unless otherwise noted, are worst-case measurements.

Name of Test: Field Strength of Radiated Emissions

Specification: 47 CFR 2.1053(a)

Guide: ANSI C63.4-2003

Measurement Procedure

After performing any exploratory testing or pre-scan the EUT was moved to the OATS.

The testing was performed with the EUT rotated 360°, the antenna scanned between 1 m and 4 m, and the antenna rotated to repeat the measurements for both horizontal and vertical antenna polarizations. During the full frequency spectrum investigation, particular focus was made on those frequencies found in exploratory testing that were used to find the final test configuration, mode of operation, and arrangement (associated with achieving the least margin with respect to the limit). This full spectrum test constitutes the compliance measurement.

Name of Test: Radiated Emissions (Non-Harmonic)
Specification: 47 CFR 15.249(c)
Test Equipment: As for Radiated Spurious Emissions (Harmonic)

15.249(c):

Emissions radiated outside of the specified frequency bands, except for harmonics, shall be attenuated by at least 50 dB below the level of the fundamental or to the general radiated emissions limits in § 15.209, whichever is the lesser attenuation.

General Radiated Emission Limits Per 15.209:

Frequency, MHz	Field Strength, $\mu\text{V}/\text{m}$ @ 3m
30 – 88	100
88 – 216	150
216 – 960	200
Above 960	300

Frequency of Carrier, MHz	= 903.00, 915.66, 926.00
Spectrum Searched	= 0 to $10 \times F_C$
All Other Emissions	= = 20 dB Below Limit
Limit, $\mu\text{V}/\text{m}$ @ 3m	= 50 dBc or § 15.209

All Spurious Emissions Were 20 dB or More Below Limit

System Sensitivity is -130 dBm

All Non-Harmonic Spurious Emissions Were, -130 dBm

Name of Test: Emission Masks (Occupied Bandwidth)

Specification: 47 CFR 2.1049(c)(1)

Measurement Procedure

1. The EUT and test equipment were set up as shown on the following page, with the Spectrum Analyzer connected.
2. For EUTs supporting digital modulation, the digital modulation mode was operated to its maximum extent.
3. The Occupied Bandwidth was measured with the Spectrum Analyzer controls set as shown on the test results.
