

## **Canada Test Report (GFSK)**

Report No.: IC190425E03-1

IC: 4418A-MR0079

Test Model: MR0079

Received Date: Apr. 25, 2019

Test Date: May 03 to 08, 2019

Issued Date: May 17, 2019

Applicant: LOGITECH FAR EAST LTD.

Address: #2 Creation Rd. 4, Science-Based Ind. Park Hsinchu Taiwan, R.O.C.

Issued By: Bureau Veritas Consumer Products Services (H.K.) Ltd., Taoyuan Branch

Hsin Chu Laboratory

Lab Address: E-2, No.1, Li Hsin 1st Road, Hsinchu Science Park, Hsinchu City 300,

Taiwan R.O.C.

Test Location: E-2, No.1, Li Hsin 1st Road, Hsinchu Science Park, Hsinchu City 300,

Taiwan R.O.C.

ISED # / CAB Identifier: 20331 / TW2022

This report is for your exclusive use. Any copying or replication of this report to or for any other person or entity, or use of our name or trademark, is permitted only with our prior written permission. This report sets forth our findings solely with respect to the test samples identified herein. The results set forth in this report are not indicative or representative of the quality or characteristics of the lot from which a test sample was taken or any similar or identical product unless specifically and expressly noted. Our report includes all of the tests requested by you and the results thereof based upon the information that you provided to us. You have 60 days from date of issuance of this report to notify us of any material error or omission caused by our negligence, provided, however, that such notice shall be in writing and shall specifically address the issue you wish to raise. A failure to raise such issue within the prescribed time shall constitute your unqualified acceptance of the completeness of this report, the tests conducted and the correctness of the report contents. Unless specific mention, the uncertainty of measurement has been explicitly taken into account to declare the compliance or non-compliance to the specification. The report must not be used by the client to claim product certification, approval, or endorsement by TAF or any government agencies.

## **Release Control Record**

| Issue No.     | Description       | Date Issued  |
|---------------|-------------------|--------------|
| IC190425E03-1 | Original release. | May 17, 2019 |

#### **Certificate of Conformity** 1

Product: Wireless Mouse

Brand: logitech G

Test Model: MR0079

Sample Status: ENGINEERING SAMPLE

Applicant: LOGITECH FAR EAST LTD.

**Test Date:** May 03 to 08, 2019

Standards: Canada RSS-247 Issue 2 (2017-02)

Canada RSS-Gen Issue 5 (2018-04)

ANSI C63.10:2013

The above equipment has been tested by Bureau Veritas Consumer Products Services (H.K.) Ltd., Taoyuan Branch, and found compliance with the requirement of the above standards. The test record, data evaluation & Equipment Under Test (EUT) configurations represented herein are true and accurate accounts of the measurements of the sample's EMC characteristics under the conditions specified in this report.

Wendy Wu / Specialist , Date: May 17, 2019

May 17, 2019 Approved by : Date:

May Chen / Manager

### 2 Summary of Test Results

|                     | RSS-247; RSS-Gen                                |        |   |  |  |  |  |
|---------------------|---|--------|---|--|--|--|--|
| Standard<br>Section | Test Item                                       | Result | Remarks   |  |  |  |  |
| RSS-Gen<br>8.8      | I AC Power Conducted Emission 1                 |        | Without AC power port of the EUT.   |  |  |  |  |
| RSS-Gen<br>6.7      | Occupied Bandwidth Measurement                  | PASS   | Meet the requirement of limit.  |  |  |  |  |
| RSS-247<br>5.5      | Radiated Emissions and Band Edge<br>Measurement | PASS   | Meet the requirement of limit. Minimum passing margin is -5.0 dB at 31.36MHz. |  |  |  |  |
| RSS-247<br>5.2 (a)  | 6dB bandwidth                                   | PASS   | Meet the requirement of limit.  |  |  |  |  |
| RSS-247<br>5.4 (d)  | Maximum Peak Output Power                       | PASS   | Meet the requirement of limit.  |  |  |  |  |
| RSS-247<br>5.2 (b)  | Power Spectral Density                          | PASS   | Meet the requirement of limit.  |  |  |  |  |

### Note:

Determining compliance based on the results of the compliance measurement, not taking into account measurement instrumentation uncertainty.

### 2.1 Measurement Uncertainty

Where relevant, the following measurement uncertainty levels have been estimated for tests performed on the EUT as specified in CISPR 16-4-2:

| Measurement                    | Frequency     | Expanded Uncertainty (k=2) (±) |
|--------------------------------|---------------|--------------------------------|
| Radiated Emissions up to 1 GHz | 30MHz ~ 1GHz  | 4.8 dB                         |
|                                | 1GHz ~ 6GHz   | 5.0 dB                         |
| Radiated Emissions above 1 GHz | 6GHz ~ 18GHz  | 5.0 dB                         |
|                                | 18GHz ~ 40GHz | 5.3 dB                         |

## 2.2 Modification Record

There were no modifications required for compliance.

### 3 General Information

## 3.1 General Description of EUT (GFSK)

| Product               | Wireless Mouse          |
|-----------------------|-------------------------|
| PMN                   | G604                    |
| Brand                 | logitech G              |
| Test Model (HVIN)     | MR0079                  |
| Status of EUT         | ENGINEERING SAMPLE      |
| FW Version (FVIN)     | NA                      |
| Test Software Version | RF Sample [Number Lock] |
| Power Supply Rating   | DC 1.5V from AA battery |
| Modulation Type       | GFSK                    |
| Modulation Technology | DTS                     |
| Transfer Rate         | Up to 2Mbps             |
| Operating Frequency   | 2.402 ~ 2.481GHz        |
| Number of Channel     | 80                      |
| Output Power          | 2.951mW                 |
| Antenna Type          | Refer to Note           |
| Antenna Connector     | Refer to Note           |
| Accessory Device      | NA                      |
| Data Cable Supplied   | NA                      |

#### Note:

1. The EUT may have a lot of colors for marketing requirement.

2. The antenna provided to the EUT, please refer to the following table:

| Antenna Gain (dBi) Frequency range(GHz) |            | Antenna Type    | Connector Type |
|---|------------|-----------------|----------------|
| 2.21                                    | 2.4~2.4835 | Printed Antenna | NA             |

3. There are Bluetooth and GFSK technology used for the EUT. The EUT has two radios as following table:

| Radio 1 | Radio 2   |  |
|---------|-----------|--|
| GFSK    | Bluetooth |  |

4. The power setting are list as below:

| Frequency<br>(MHz) | Power Setting | Frequency (MHz) | Power Setting | Frequency<br>(MHz) | Power Setting |
|--------------------|---------------|-----------------|---------------|--------------------|---------------|
| 2402               | Default       | 2442            | Default       | 2481               | Default       |

5. The above EUT information is declared by manufacturer and for more detailed features description, please refer to the manufacturer's specifications or user's manual.

# 3.2 Description of Test Modes

80 channels are provided to this EUT:

| Channel | Freq. (MHz) |
|---------|-------------|---------|-------------|---------|-------------|---------|-------------|
| 1       | 2402        | 21      | 2422        | 41      | 2442        | 61      | 2462        |
| 2       | 2403        | 22      | 2423        | 42      | 2443        | 62      | 2463        |
| 3       | 2404        | 23      | 2424        | 43      | 2444        | 63      | 2464        |
| 4       | 2405        | 24      | 2425        | 44      | 2445        | 64      | 2465        |
| 5       | 2406        | 25      | 2426        | 45      | 2446        | 65      | 2466        |
| 6       | 2407        | 26      | 2427        | 46      | 2447        | 66      | 2467        |
| 7       | 2408        | 27      | 2428        | 47      | 2448        | 67      | 2468        |
| 8       | 2409        | 28      | 2429        | 48      | 2449        | 68      | 2469        |
| 9       | 2410        | 29      | 2430        | 49      | 2450        | 69      | 2470        |
| 10      | 2411        | 30      | 2431        | 50      | 2451        | 70      | 2471        |
| 11      | 2412        | 31      | 2432        | 51      | 2452        | 71      | 2472        |
| 12      | 2413        | 32      | 2433        | 52      | 2453        | 72      | 2473        |

#### 3.2.1 Test Mode Applicability and Tested Channel Detail

| EUT<br>CONFIGURE |       | APPLICA | ABLE TO | DESCRIPTION |             |
|------------------|-------|---------|---------|-------------|-------------|
| MODE             | RE≥1G | RE<1G   | PLC     | APCM        | DESCRIPTION |
| -                | V     | V       | -       | V           | -           |

Where RE≥1G: Radiated Emission above 1GHz & Bandedge Measurement

RE<1G: Radiated Emission below 1GHz

PLC: Power Line Conducted Emission

**APCM:** Antenna Port Conducted Measurement

Note: 1. No need to concern of Conducted Emission due to the EUT is powered by battery.

### Radiated Emission Test (Above 1GHz):

Pre-Scan has been conducted to determine the worst-case mode from all possible combinations between available modulations, data rates and antenna ports (if EUT with antenna diversity architecture).

Following channel(s) was (were) selected for the final test as listed below.

| AVAILABLE CHANNEL TESTED CHANNEL |           | MODULATION TYPE | DATA RATE (Mbps) |  |
|----------------------------------|-----------|-----------------|------------------|--|
| 1 to 80                          | 1, 41, 80 | GFSK            | 2                |  |

### **Radiated Emission Test (Below 1GHz):**

Pre-Scan has been conducted to determine the worst-case mode from all possible combinations between available modulations, data rates and antenna ports (if EUT with antenna diversity architecture).

Following channel(s) was (were) selected for the final test as listed below.

| AVAILABLE CHANNEL | TESTED CHANNEL | MODULATION TYPE | DATA RATE (Mbps) |  |
|-------------------|----------------|-----------------|------------------|--|
| 1 to 80           | 80             | GFSK            | 2                |  |

### **Antenna Port Conducted Measurement:**

- This item includes all test value of each mode, but only includes spectrum plot of worst value of each mode.
- Pre-Scan has been conducted to determine the worst-case mode from all possible combinations between available modulations, data rates and antenna ports (if EUT with antenna diversity architecture).

□ Following channel(s) was (were) selected for the final test as listed below.

| AVAILABLE CHANNEL | TESTED CHANNEL | MODULATION TYPE | DATA RATE (Mbps) |  |
|-------------------|----------------|-----------------|------------------|--|
| 1 to 80           | 1, 41, 80      | GFSK            | 2                |  |

### **Test Condition:**

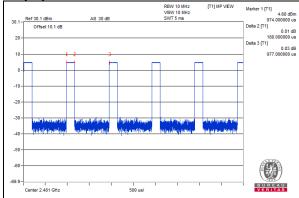

| APPLICABLE TO | ENVIRONMENTAL CONDITIONS        | INPUT POWER | TESTED BY     |
|---------------|---------------------------------|-------------|---------------|
| RE≥1G         | <b>RE≥1G</b> 22deg. C, 67%RH    |             | Nelson Teng   |
| RE<1G         | <b>RE&lt;1G</b> 23deg. C, 68%RH |             | Nelson Teng   |
| APCM          | 25deg. C, 60%RH                 | 1.5Vdc      | Anderson Chen |

Report No.: IC190425E03-1 Page No. 9 / 35 Report Format Version: 6.1.2

## 3.3 Duty Cycle of Test Signal

## Duty cycle = 0.18 ms / 0.977 ms =18.4

Note: This is highest operational duty cycle.

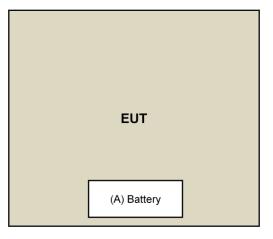

## 3.4 Description of Support Units

The EUT has been tested as an independent unit together with other necessary accessories or support units. The following support units or accessories were used to form a representative test configuration during the tests.

| ID | Product | Brand     | Model No. | Serial No. | FCC ID | Remarks         |
|----|---------|-----------|-----------|------------|--------|-----------------|
| A. | Battery | Panasonic | AA        | NA         | NA     | Provided by Lab |

## 3.4.1 Configuration of System under Test

## 3.5 General Description of Applied Standards

The EUT is a RF Product. According to the specifications of the manufacturer, it must comply with the requirements of the following standards:

Canada RSS-247 Issue 2 (2017-02) Canada RSS-Gen Issue 5 (2018-04) KDB 558074 D01 15.247 Meas Guidance v05r02 ANSI C63.10-2013

All test items have been performed and recorded as per the above standards.

### 4 Test Types and Results

## 4.1 Radiated Emission and Bandedge Measurement

## 4.1.1 Limits of Radiated Emission and Bandedge Measurement

Radiated emissions which fall in the restricted bands must comply with the radiated emission limits specified as below table. Other emissions shall be at least 20dB below the highest level of the desired power:

| pe                   |                                      |                               |
|----------------------|--------------------------------------|-------------------------------|
| Frequencies<br>(MHz) | Field Strength<br>(microvolts/meter) | Measurement Distance (meters) |
| 0.009 ~ 0.490        | 2400/F(kHz)                          | 300                           |
| 0.490 ~ 1.705        | 24000/F(kHz)                         | 30                            |
| 1.705 ~ 30.0         | 30                                   | 30                            |
| 30 ~ 88              | 100                                  | 3                             |
| 88 ~ 216             | 150                                  | 3                             |
| 216 ~ 960            | 200                                  | 3                             |
| Above 960            | 500                                  | 3                             |

### Note:

- 1. The lower limit shall apply at the transition frequencies.
- 2. Emission level (dBuV/m) = 20 log Emission level (uV/m).
- 3. For frequencies above 1000MHz, the field strength limits are based on average detector, however, the peak field strength of any emission shall not exceed the maximum permitted average limits, specified above by more than 20dB under any condition of modulation.

#### 4.1.3 Test Procedures

#### For Radiated emission below 30MHz

- a. The EUT was placed on the top of a rotating table 0.8 meters above the ground at a 3 meter chamber room. The table was rotated 360 degrees to determine the position of the highest radiation.
- b. The EUT was set 3 meters away from the interference-receiving antenna, which was mounted on the top of a variable-height antenna tower.
- c. Parallel, perpendicular, and ground-parallel orientations of the antenna are set to make the measurement.
- d. For each suspected emission, the EUT was arranged to its worst case and the rotatable table was turned from 0 degrees to 360 degrees to find the maximum reading.
- e. The test-receiver system was set to Quasi-Peak Detect Function and Specified Bandwidth with Maximum Hold Mode.

#### Note:

1. The resolution bandwidth and video bandwidth of test receiver/spectrum analyzer is 9kHz at frequency below 30MHz.

#### For Radiated emission above 30MHz

- a. The EUT was placed on the top of a rotating table 0.8 meters (for 30MHz ~ 1GHz) / 1.5 meters (for above 1GHz) above the ground at 3 meter chamber room for test. The table was rotated 360 degrees to determine the position of the highest radiation.
- b. The EUT was set 3 meters away from the interference-receiving antenna, which was mounted on the top of a variable-height antenna tower.
- c. The height of antenna is varied from one meter to four meters above the ground to determine the maximum value of the field strength. Both horizontal and vertical polarizations of the antenna are set to make the measurement.
- d. For each suspected emission, the EUT was arranged to its worst case and then the antenna was tuned to heights from 1 meter to 4 meters and the rotatable table was turned from 0 degrees to 360 degrees to find the maximum reading.
- e. The test-receiver system was set to quasi-peak detect function and specified bandwidth with maximum hold mode when the test frequency is below 1 GHz.
- f. The test-receiver system was set to peak and average detects function and specified bandwidth with maximum hold mode when the test frequency is above 1 GHz. If the peak reading value also meets average limit, measurement with the average detector is unnecessary.

#### Note:

- 1. The resolution bandwidth and video bandwidth of test receiver/spectrum analyzer is 120kHz for Quasi-peak detection (QP) at frequency below 1GHz.
- 2. The resolution bandwidth of test receiver/spectrum analyzer is 1 MHz and the video bandwidth is 3 MHz for Peak detection (PK) at frequency above 1GHz.
- 3. The resolution bandwidth of test receiver/spectrum analyzer is 1 MHz and the video bandwidth is 3 MHz for Average detection (AV) at frequency above 1GHz.
- 4. All modes of operation were investigated and the worst-case emissions are reported.

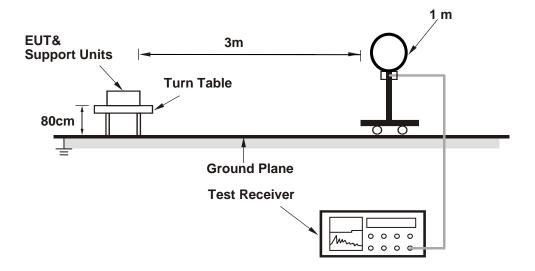

### 4.1.4 Deviation from Test Standard

No deviation.

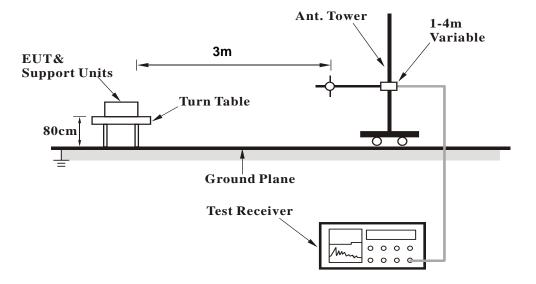

### 4.1.5 Test Setup

## For Radiated emission below 30MHz

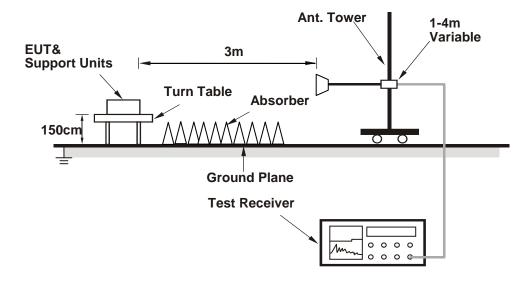

## For Radiated emission 30MHz to 1GHz

### For Radiated emission above 1GHz

For the actual test configuration, please refer to the attached file (Test Setup Photo).

## 4.1.6 EUT Operating Conditions

- a. Placed the EUT on the testing table.
- b. Controlling software (RF Sample [Number Lock]) has been activated to set the EUT under transmission condition continuously.
- ◆ LS1.0 TX Modulated standard duty 2402MHz
- ◆ LS1.0 TX Modulated standard duty 2442MHz
- ◆ LS1.0 TX Modulated standard duty 2481MHz

### 4.1.7 Test Results

### **Above 1GHz Data:**

- 5. The emission levels were very low against the limit of frequency range 9kHz~30MHz: the amplitude of spurious emissions attenuated more than 20 dB below the permissible value to be report.

#### 4.2 6dB Bandwidth Measurement

#### 4.2.1 Limits of 6dB Bandwidth Measurement

The minimum of 6dB Bandwidth Measurement is 0.5 MHz.

### 4.2.2 Test Setup

#### 4.2.3 Test Instruments

Refer to section 4.1.2 to get information of above instrument.

#### 4.2.4 Test Procedure

- a. Set resolution bandwidth (RBW) = 100kHz
- b. Set the video bandwidth (VBW)  $\geq$  3 x RBW, Detector = Peak.
- c. Trace mode = max hold.
- d. Sweep = auto couple.
- e. Measure the maximum width of the emission that is constrained by the frequencies associated with the two amplitude points (upper and lower) that are attenuated by 6 dB relative to the maximum level measured in the fundamental emission

### 4.2.5 Deviation from Test Standard

No deviation.

### 4.2.6 EUT Operating Conditions

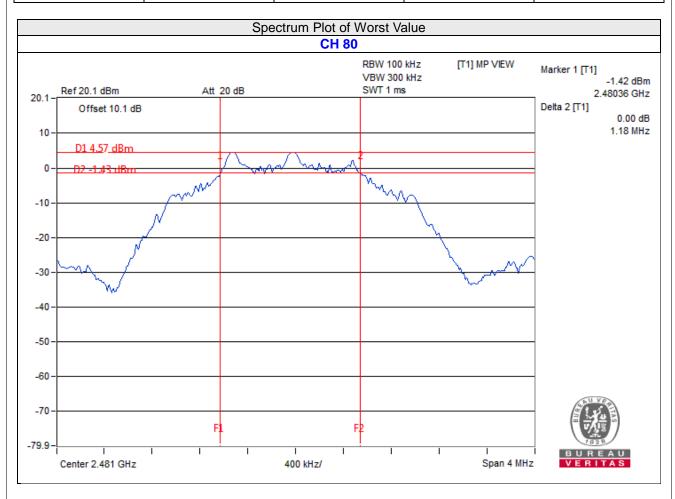

The software provided by client to enable the EUT under transmission condition continuously at lowest, middle and highest channel frequencies individually.

- ◆ LS1.0 TX Modulated standard duty 2402MHz
- ◆ LS1.0 TX Modulated standard duty 2442MHz
- ◆ LS1.0 TX Modulated standard duty 2481MHz

### 4.2.7 Test Results

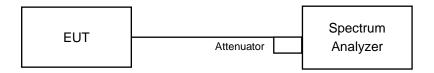

| Channel | Frequency (MHz) | 6dB Bandwidth<br>(MHz) | Minimum Limit<br>(MHz) | Pass / Fail |
|---------|-----------------|------------------------|------------------------|-------------|
| 1       | 2402            | 1.21                   | 0.5                    | Pass        |
| 41      | 2442            | 1.24                   | 0.5                    | Pass        |
| 80      | 2481            | 1.18                   | 0.5                    | Pass        |

### 4.3 Occupied Bandwidth Measurement

### 4.3.1 Test Setup

#### 4.3.2 Test Instruments

Refer to section 4.1.2 to get information of above instrument.

#### 4.3.3 Test Procedure

The transmitter output was connected to the spectrum analyzer through an attenuator. The bandwidth of the fundamental frequency was measured by spectrum analyzer with resolution bandwidth in the range of 1% to 5% of the anticipated emission bandwidth, and a video bandwidth at least 3x the resolution bandwidth and set the detector to sampling. The width of a frequency band such that, below the lower and above the upper frequency limits, the mean powers emitted are each equal to a specified percentage 0.5% of the total mean power of a given emission.

### 4.3.4 Deviation from Test Standard

No deviation.

### 4.3.5 EUT Operating Conditions

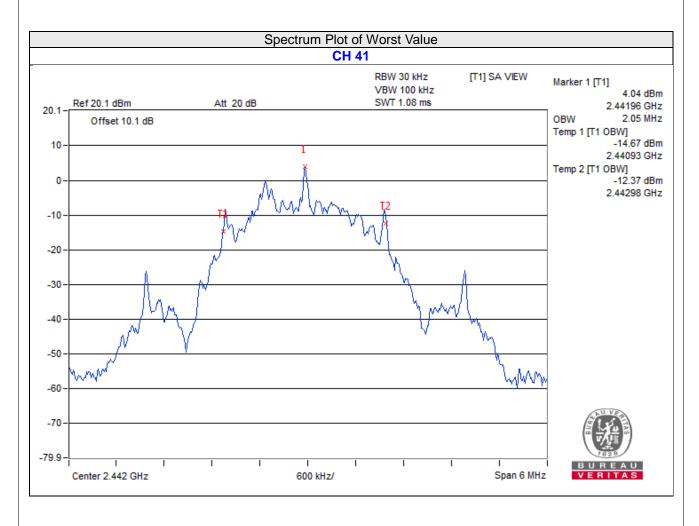

The software provided by client to enable the EUT under transmission condition continuously at lowest, middle and highest channel frequencies individually.

- ◆ LS1.0 TX Modulated standard duty 2402MHz
- ◆ LS1.0 TX Modulated standard duty 2442MHz
- ◆ LS1.0 TX Modulated standard duty 2481MHz

### 4.3.6 Test Results

| Channel | Frequency (MHz) | Occupied Bandwidth<br>(MHz) |
|---------|-----------------|-----------------------------|
| 1       | 2402            | 2.04                        |
| 41      | 2442            | 2.05                        |
| 80      | 2481            | 2.04                        |

### 4.4 Conducted Output Power Measurement

### 4.4.1 Limits of Conducted Output Power Measurement

For systems using digital modulation in the 2400-2483.5 MHz bands: 1 Watt (30dBm)

### 4.4.2 Test Setup

#### 4.4.3 Test Instruments

Refer to section 4.1.2 to get information of above instrument.

### 4.4.4 Test Procedures

A peak power sensor was used on the output port of the EUT. A power meter was used to read the response of the peak power sensor. Record the power level.

Average power sensor was used to perform output power measurement, trigger and gating function of wide band power meter is enabled to measure max output power of TX on burst. Duty factor is not added to measured value.

### 4.4.5 Deviation from Test Standard

No deviation.

### 4.4.6 EUT Operating Conditions

The software provided by client to enable the EUT under transmission condition continuously at lowest, middle and highest channel frequencies individually.

- ◆ LS1.0 TX Modulated standard duty 2402MHz
- ◆ LS1.0 TX Modulated standard duty 2442MHz
- ◆ LS1.0 TX Modulated standard duty 2481MHz

## 4.4.7 Test Results

### **FOR PEAK POWER**

| Channel | Frequency<br>(MHz) | Peak Power<br>(mW) | Peak Power<br>(dBm) | Limit<br>(dBm) | Pass/Fail |
|---------|--------------------|--------------------|---------------------|----------------|-----------|
| 1       | 2402               | 2.323              | 3.66                | 30             | Pass      |
| 41      | 2442               | 2.931              | 4.67                | 30             | Pass      |
| 80      | 2481               | 2.951              | 4.70                | 30             | Pass      |

## **FOR AVERAGE POWER**

| Channel | Frequency<br>(MHz) | Average Power (mW) | Average Power (dBm) |
|---------|--------------------|--------------------|---------------------|
| 1       | 2402               | 2.208              | 3.44                |
| 41      | 2442               | 2.851              | 4.55                |
| 80      | 2481               | 2.858              | 4.56                |

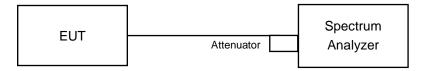

## 4.5 Power Spectral Density Measurement

### 4.5.1 Limits of Power Spectral Density Measurement

The Maximum of Power Spectral Density Measurement is 8dBm in any 3 kHz.

#### 4.5.2 Test Setup

### 4.5.3 Test Instruments

Refer to section 4.1.2 to get information of above instrument.

### 4.5.4 Test Procedure

- a. Set analyzer center frequency to DTS channel center frequency.
- b. Set the span to 1.5 times the DTS bandwidth.
- c. Set the RBW to:  $3 \text{ kHz} \leq \text{RBW} \leq 100 \text{ kHz}$ .
- d. Set the VBW  $\geq$  3 × RBW.
- e. Detector = peak.
- f. Sweep time = auto couple.
- g. Trace mode = max hold.
- h. Allow trace to fully stabilize.
- i. Use the peak marker function to determine the maximum amplitude level within the RBW.

## 4.5.5 Deviation from Test Standard

No deviation.

### 4.5.6 EUT Operating Condition

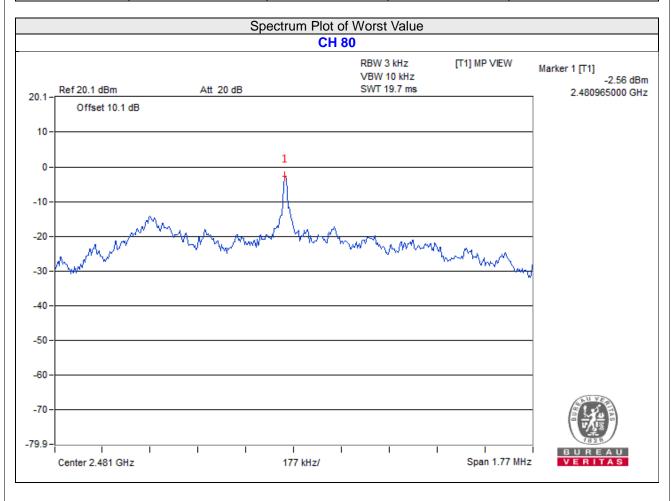

The software provided by client to enable the EUT under transmission condition continuously at lowest, middle and highest channel frequencies individually.

- ◆ LS1.0 TX Modulated standard duty 2402MHz
- ◆ LS1.0 TX Modulated standard duty 2442MHz
- LS1.0 TX Modulated standard duty 2481MHz

## 4.5.7 Test Results

| Channel | Freq.<br>(MHz) | PSD<br>(dBm/3kHz) | Limit<br>(dBm/3kHz) | Pass<br>/Fail |
|---------|----------------|-------------------|---------------------|---------------|
| 1       | 2402           | -3.93             | 8                   | Pass          |
| 41      | 2442           | -2.71             | 8                   | Pass          |
| 80      | 2481           | -2.56             | 8                   | Pass          |

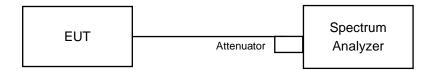

#### 4.6 Conducted Out of Band Emission Measurement

#### 4.6.1 Limits of Conducted Out of Band Emission Measurement

Below 20dB of the highest emission level of operating band (in 100kHz Resolution Bandwidth).

#### 4.6.2 Test Setup

#### 4.6.3 Test Instruments

Refer to section 4.1.2 to get information of above instrument.

#### 4.6.4 Test Procedure

### **MEASUREMENT PROCEDURE REF**

- 1. Set the RBW = 100 kHz.
- 2. Set the VBW ≥ 300 kHz.
- 3. Detector = peak.
- 4. Sweep time = auto couple.
- 5. Trace mode = max hold.
- 6. Allow trace to fully stabilize.
- 7. Use the peak marker function to determine the maximum power level in any 100 kHz band segment within the fundamental EBW.

### **MEASUREMENT PROCEDURE OOBE**

- 1. Set RBW = 100 kHz.
- 2. Set VBW ≥ 300 kHz.
- 3. Detector = peak.
- 4. Sweep = auto couple.
- 5. Trace Mode = max hold.
- 6. Allow trace to fully stabilize.
- 7. Use the peak marker function to determine the maximum amplitude level.
- 4.6.5 Deviation from Test Standard

No deviation.

### 4.6.6 EUT Operating Condition

The software provided by client to enable the EUT under transmission condition continuously at lowest, middle and highest channel frequencies individually.

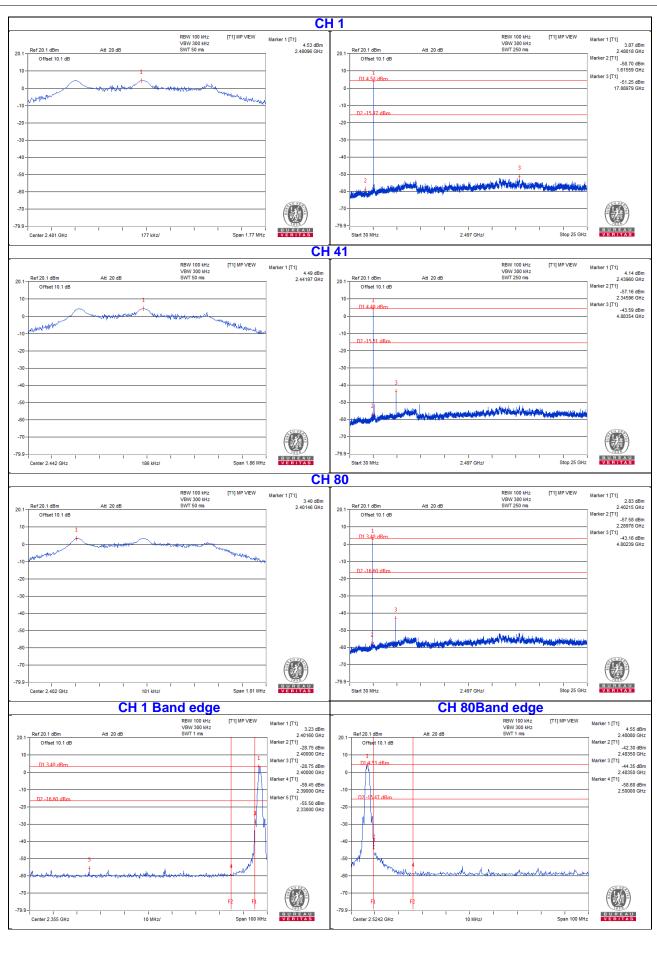

- ◆ LS1.0 TX Modulated standard duty 2402MHz
- ◆ LS1.0 TX Modulated standard duty 2442MHz
- ◆ LS1.0 TX Modulated standard duty 2481MHz

#### 4.6.7 Test Results

The spectrum plots are attached on the following pages. D1 line indicates the highest level, and D2 line indicates the 20dB offset below D1. It shows compliance with the requirement.

Report No.: IC190425E03-1 Page No. 32 / 35 Report Format Version: 6.1.2

### Appendix - Information of the Testing Laboratories

We, Bureau Veritas Consumer Products Services (H.K.) Ltd., Taoyuan Branch, were founded in 1988 to provide our best service in EMC, Radio, Telecom and Safety consultation. Our laboratories are accredited and approved according to ISO/IEC 17025.

If you have any comments, please feel free to contact us at the following:
