

FCC DFS Test Report

Equipment	: Camera
Brand Name	: Logitech
Model No.	: V-R0008
FCC ID	: JNZVR0008
Standard	: 47 CFR FCC Part 15.407
Frequency Range	: 5250 MHz – 5350 MHz 5470 MHz – 5725 MHz
Applicant	: Logitech Far East Ltd No. 2, Creation Road IV Science-Based Industrial Park Hsinchu Taiwan
Manufacturer	: Company Name Chicony Electronics (Dong Guan) Co., Ltd. San Zhong Guan Li Qu, Qingxi Town, Dongguan City Guangdong 523651 China
Operate Mode	: Client without radar detection

The product sample received on Apr. 06, 2017 and completely tested on May 06, 2017. We, SPORTON, would like to declare that the tested sample has been evaluated in accordance with the procedures given in KDB 905462 D02 UNII DFS Compliance Procedures New Rules v02 and shown compliance with the applicable technical standards.

The test results in this report apply exclusively to the tested model / sample. Without written approval of SPORTON INTERNATIONAL INC., the test report shall not be reproduced except in full.

Phoenix Chen SPORTON INTERNATIONAL INC.

1 General Description

1.1 Information

1.1.1 RF General Information

Specification Items	Desc	cription		
Product Type	WLAN (1TX, 1RX)			
Radio Type	Intentional Transceiver	Intentional Transceiver		
Power Type	From power adapter / host system			
Modulation	IEEE 802.11a: OFDM (BPSK / QPS	SK / 16QAM / 64QAM)		
	IEEE 802.11n: see the below table			
Data Rate (Mbps)	IEEE 802.11a: OFDM (6/9/12/18/24	4/36/48/54)		
	IEEE 802.11n: see the below table			
Channel Bandwidth	20/40 MHz operating channel banc	lwidth		
	Master			
	Bridge			
Operating Mode	Mesh			
	Client with radar detection			
	Client without radar detection			
Communication Mode	IP Based (Load Based)	Frame Based		
TPC Function	With TPC	Without TPC		
Weather Band (5600~5650MHz)	With 5600~5650MHz	Without 5600~5650MHz		
Max. Con. Power (DFS band)	Band 2:			
	IEEE 802.11a: 19.09 dBm			
	IEEE 802.11n MCS0 (HT20): 18.98	3 dBm		
	IEEE 802.11n MCS0 (HT40): 18.10 dBm			
	Band 3:			
	IEEE 802.11a: 18.18 dBm			
	IEEE 802.11n MCS0 (HT20): 18.08	3 dBm		
	IEEE 802.11n MCS0 (HT40): 16.94	l dBm		

Max. EIRP Power (DFS band)	Band 2:	
	IEEE 802.11a: 22.00 dBm	
	IEEE 802.11n MCS0 (HT20): 21.89 dBm	
	IEEE 802.11n MCS0 (HT40): 21.01 dBm	
	Band 3:	
	IEEE 802.11a: 21.09 dBm	
	IEEE 802.11n MCS0 (HT20): 20.99 dBm	
	IEEE 802.11n MCS0 (HT40): 19.85 dBm	
Power-on cycle	NA (No Channel Availability Check Function)	
Software / Firmware Version	6.10.191.ab.r13	
Hardware Version	PB3	
Note [:] EUT employ a TPC mechanis	sm and TPC have the capability to operate at least 6 dB below highest RE	

Note: EUT employ a TPC mechanism and TPC have the capability to operate at least 6 dB below highest RF output power.

Antenna & Band width

Antenna	1 (TX)		
Band width Mode	20 MHz	40 MHz	80 MHz
IEEE 802.11n	Х	V	Х

IEEE 11n Spec.

Protocol	Number of Transmit Chains (NTX)	Data Rate / MCS			
802.11n (HT40)	1	MCS0-7			
Note 1: IEEE Std. 802.11n modulation consists of HT40 (HT: High Throughput). Then EUT support HT40.					

1.1.2 Antenna Information

Ant.	Brand	Model Name	Antenna Type	Connector	Gain (dBi)
1	-	-	PIFA Antenna	fixed on board	2.91

1.1.3 DFS Band Carrier Frequencies

There are three bandwidth systems.

For 40MHz bandwidth systems, use Channel 54, 62, 102, 110, 118, 126, 134.

Frequency Band	Channel No.	Frequency	Channel No.	Frequency	
5250~5350 MHz	54	5270 MH 7	62	5310 MHz	
Band 2	54	54 5270 MHz	62	5310 MIHZ	
5470 5705 MU	102	5510 MHz	126	5630 MHz	
5470~5725 MHz Band 3	110	5550 MHz	134	5670 MHz	
	118	5590 MHz	-	-	

1.2 Accessories

Accessories				
AC Adaptor	Brand Name	I.T.E	Model Name	AD2063M22
AC Adapter	Power Rating	I/P: 100-240Vac, 0.3A	, O/P: 5.1Vdc, 1.4	A

Reminder: Regarding to more detail and other information, please refer to user manual.

1.3 Support Equipment

	Support Equipment						
No.	No. Equipment Brand Name Model Name FCC ID						
1	AP (Master)	EDIMAX	EW-7679WAC	NDD9576791401			
2	NoteBook	DELL	Latitude E5550	DoC			
3	Adapter for NB	DELL	FA90PSO-00	DoC			

1.4 Testing Applied Standards

According to the specifications of the manufacturer, the EUT must comply with the requirements of the following standards:

KDB 905462 D02 UNII DFS Compliance Procedures New Rules v02

1.5 Testing Location Information

	Testing Location						
\square	HWA YA	ADD : No. 52, Huaya 1st Rd., Guishan Dist., Taoyuan City, Taiwan (R.O.C.)					
		TEL : 886-3-327-3456 FAX : 886-3-327-0973					
	Test site Designation No. 553509 with FCC.						
		Test site registered number IC 4086B-1 with Industry Canada.					
	JHUBEI	ADD : No.8, Lane 724, Bo-ai St., Jhubei City, HsinChu County 302, Taiwan, R.O.C.					
	TEL : 886-3-656-9065 FAX : 886-3-656-9085						
	Test site Designation No. TW0006 with FCC.						
	Test site registered number IC 4086D with Industry Canada.						

Test Condition	Test Site No.	Test Engineer	Test Environment	Test Date	
DFS Site	DFS01-HY	Ben	25℃ / 55%	06/May/2017	

2 Test Configuration of EUT

2.1 Test Channel Frequencies Configuration

Test Channel Frequencies Configuration				
IEEE Std. Test Channel Freq. (MHz)				
802.11n (HT40)	5510 MHz			

2.2 The Worst Case Measurement Configuration

Tł	The Worst Case Mode for Following Conformance Tests				
Tests Item	Dynamic Frequency Selection (DFS)				
Test Condition	Conducted measurement at transmit chains The EUT shall be configured to operate at the highest transmitter output power setting. If more than one antenna assembly is intended for this power setting, the gain of the antenna assembly with the lowest gain shall be used.				
Modulation Mode	802.11n (HT40)				

3 Dynamic Frequency Selection (DFS) Test Result

3.1 General DFS Information

3.1.1 DFS Parameters

Table D.1: DFS requirement values					
Parameter Value					
Non-occupancy period	Minimum 30 minutes				
Channel Availability Check Time	60 seconds				
Channel Move Time	10 seconds (Note 1).				
Channel Closing Transmission Time	200 milliseconds + an aggregate of 60 milliseconds over remaining 10 second periods. (Notes 1 and 2).				
U-NII Detection Bandwidth	Minimum 100% of the 99% power bandwidth (Note 3).				
 Note 1: Channel Move Time and the Channel Closing Transmission Time should be performed with Radar Type 0. The measurement timing begins at the end of the Radar Type 0 burst. Note 2: The Channel Closing Transmission Time is comprised of 200 milliseconds starting at the beginning of the Channel Move Time plus any additional intermittent control signals required to facilitate 					

Channel changes (an aggregate of 60 milliseconds) during the remainder of the 10 second period. The aggregate duration of control signals will not count quiet periods in between transmissions. Note 3: During the U-NII Detection Bandwidth detection test, radar type 0 is used and for each frequency step the minimum percentage of detection is 90%. Measurements are performed with no data traffic.

Table D.2: Interference threshold values				
Maximum Transmit Power	Value (see note)			
EIRP ≥ 200 mW	-64 dBm			
EIRP < 200 mW and PSD < 10dBm/MHz	-62 dBm			
EIRP < 200 mW and PSD ≥ 10dBm/MHz	-64 dBm			
Note 1: This is the level at the input of the receiver assuming a 0 dBi receive antenna.				

Note 2: Throughout these test procedures an additional 1 dB has been added to the amplitude of the test transmission waveforms to account for variations in measurement equipment. This will ensure that the test signal is at or above the detection threshold level to trigger a DFS response. Note3: EIRP is based on the highest antenna gain. For MIMO devices refer to KDB Publication 662911D01.

3.1.2 Applicability of DFS Requirements Prior to Use of a Channel

	DFS Operational mode				
Requirement	Master	Client without radar detection	Client with radar detection		
Non-Occupancy Period	Yes	Not required (See the note)	Yes		
DFS Detection Threshold	Yes	Not required	Yes		
Channel Availability Check Time	Yes	Not required	Not required		
U-NII Detection Bandwidth	Yes	Not required	Yes		

Note :

According to KDB 905462 D03 Client Without DFS New Rules v01r02 (b) 6."An analyzer plot that contains a single 30-minute sweep on the original channel "

3.1.3 Applicability of DFS Requirements during Normal Operation

	DFS Operational mode				
Requirement	Master	Client without radar detection	Client with radar detection		
DFS Detection Threshold	Yes	Not required	Yes		
Channel Closing Transmission Time	Yes	Yes	Yes		
Channel Move Time	Yes	Yes	Yes		
U-NII Detection Bandwidth	Yes	Not required	Yes		

Additional requirements for devices with multiple bandwidth modes	Master Device or Client with Radar Detection	Client Without Radar Detection			
U-NII Detection Bandwidth and Statistical Performance Check	All BW modes must be tested	Not required			
Channel Move Time and Channel Closing Transmission Time	Test using widest BW mode available	Test using the widest BW mode available for the link			
All other tests	Any single BW mode	Not required			
Note: Frequencies selected for statistical performance check (Section 7.8.4) should include several frequencies within the radar detection bandwidth and frequencies near the edge of the radar detection					
bandwidth. For 802.11 devices it is suggested to select frequencies in each of the bonded 20 MHz channels and the channel center frequency.					

3.1.4 Channel Loading/Data Streaming

	The data file (MPEG-4) has been transmitting in a streaming mode.
\square	Software to ping the client is permitted to simulate data transfer with random ping intervals.
\square	Minimum channel loading of approximately 17%.
	Unicast protocol has been used.

3.2 Radar Test Waveform Calibration

3.2.1 Short Pulse Radar Test Waveforms

Radar Type	Pulse Width (µsec)	PRI (µsec)	Number of Pulses	Minimum Percentage of Successful Detection	Minimum Trials		
0	1	1428	18	See Note 1	See Note 1		
1A	1	15 unique PRI in KDB 905462 D02 Table 5a	$\left[(1), (19 \times 10^6) \right]$	60%	15		
1B	1	15 unique PRI within 518-3066, Excluding 1A PRI	$Roundup\left\{\left(\frac{1}{360}\right)\times\left(\frac{19\times10^{6}}{PRI}\right)\right\}$	60%	15		
2	1-5	150-230	23-29	60%	30		
3	6-10	200-500	16-18	60%	30		
4	11-20	200-500	12-16	60%	30		
Aggrega	Aggregate (Radar Types 1-4)80%120						

Note 1: Short Pulse Radar Type 0 should be used for the detection bandwidth test, channel move time, and channel closing time tests.

A minimum of 30 unique waveforms are required for each of the short pulse radar types 1 through 4. If more than 30 waveforms are used for short pulse radar types 1 through 4, then each additional waveform must also be unique and not repeated from the previous waveforms. The aggregate is the average of the percentage of successful detections of short pulse radar types 1-4.

Radar Type	Pulse Width (µsec)	Chirp Width (MHz)	PRI (µsec)	Number of Pulses per <i>Burst</i>	Number of <i>Bursts</i>	Minimum Percentage of Successful Detection	Minimum Trials
5	50-100	5-20	1000-2000	1-3	8-20	80%	30

3.2.2 Long Pulse Radar Test Waveform

Each waveform is defined as follows:

- The transmission period for the Long Pulse Radar test signal is 12 seconds.
- There are a total of 8 to 20 Bursts in the 12 second period, with the number of Bursts being randomly chosen. This number is Burst Count.
- Each Burst consists of 1 to 3 pulses, with the number of pulses being randomly chosen. Each Burst within the 12 second sequence may have a different number of pulses.
- The pulse width is between 50 and 100 microseconds, with the pulse width being randomly chosen. Each pulse within a Burst will have the same pulse width. Pulses in different Bursts may have different pulse widths.
- Each pulse has a linear FM chirp between 5 and 20 MHz, with the chirp width being randomly chosen. Each pulse within a transmission period will have the same chirp width. The chirp is centered on the pulse. For example, with a radar frequency of 5300 MHz and a 20 MHz chirped signal, the chirp starts at 5290 MHz and ends at 5310 MHz.
- If more than one pulse is present in a Burst, the time between the pulses will be between 1000 and 2000 microseconds, with the time being randomly chosen. If three pulses are present in a Burst, the time between the first and second pulses is chosen independently of the time between the second and third pulses.
- The 12 second transmission period is divided into even intervals. The number of intervals is equal to Burst Count. Each interval is of length (12,000,000 / Burst Count) microseconds. Each interval contains one Burst. The start time for the Burst, relative to the beginning of the interval, is between 1 and [(12,000,000 / Burst Count) – (Total Burst Length) + (One Random PRI Interval)] microseconds, with the start time being randomly chosen. The step interval for the start time is 1 microsecond. The start time for each Burst is chosen independently.

Minimum Pulse Hopping Radar PRI Pulses Hopping Percentage of Minimum Width Sequence Rate (kHz) Successful Trials Туре (µsec) per Hop Length (ms) (usec) Detection 70% 6 1 333 9 0.333 300 30

3.2.3 Frequency Hopping Radar Test Waveform

The FCC Type 6 waveform uses a static waveform with 100 bursts in the instruments ARB. In addition, the RF list mode is operated with a list containing 100 frequencies from a randomly generated list and it had be ensured that at least one of the random frequencies falls into the UNII Detection Bandwidth of the DUT. Each burst from the waveform file initiates a trigger pulse at the beginning that switches the RF list from one item to the next one.

3.2.4 DFS Threshold Level

DFS Threshold Level						
DFS Threshold level: -63 dBm 🛛 at the antenna connector						
in front of the antenna						
The Interference Radar Detection Threshold Level is is $-64 dBm + 0 [dBi] + 1 dB = -63 dBm$. That had beer taken into account the output power range and antenna gain.						

3.2.5 Calibration Setup

3.2.6 Radar Waveform calibration Plot

3.2.7 Test Setup

A spectrum analyzer is used as a monitor to verify that the EUT has vacated the Channel within the (Channel Closing Transmission Time and Channel Move Time, and does not transmit on a Channel during the Non-Occupancy Period after the detection and Channel move.

3.2.8 Data traffic Plot

3.3 In-service Monitoring

3.3.1 In-service Monitoring Limit

In-service Monitoring Limit				
Channel Move Time	10 sec			
Channel Closing Transmission Time	200 ms + an aggregate of 60 ms over remaining 10 sec periods.			
Non-occupancy period	Minimum 30 minutes			

3.3.2 Measuring Instruments

Refer a test equipment and calibration data table in this test report.

3.3.3 Test Procedures

Test Method
Verified during In-Service Monitoring; Channel Closing Transmission Time, Channel Move Time. Client Device will associate with the EUT. Observe the transmissions of the EUT at the end of the radar Burst on the Operating Channel for duration greater than 10 seconds. Measure and record the transmissions from the EUT during the observation time (Channel Move Time). Compare the Channel Move Time and Channel Closing Transmission Time limits.
Verified during In-Service Monitoring; Channel Closing Transmission Time, Channel Move Time. One 12 sec plot needs to be reported for the Short Pulse Radar Types 0. And zoom-in a 60 ms plot verified channel closing time for the aggregate transmission time starting from 200ms after the end of the radar signal to the completion of the channel move.
Verified during In-Service Monitoring; Non-Occupancy Period. Client Device will associate with the EUT. Observe the transmissions of the EUT at the end of the radar Burst on the Operating Channel for duration greater than 10 seconds. Measure and record the transmissions from the EUT during the observation time (Non-Occupancy Period). Compare the Non-Occupancy Period limits.

3.3.4 Test Result of In-service Monitoring

Modulation Mode: 802.11n (HT40)

Devenueter	Test Result	Limit	
Parameter	Туре 0		
Test Channel (MHz)	5510 MHz	-	
Channel Move Time (sec.)	4.239	< 10s	
Channel Closing Transmission Time (ms) (Note)	7.500	< 60ms	
Non-Occupancy Period (min.)	≧30	\geq 30 min	

Note: The Channel Closing Transmission Time is comprised of 200 milliseconds starting at the beginning of the Channel Move Time plus any additional intermittent control signals required to facilitate a Channel move (an aggregate of 60 milliseconds) during the remainder of the 10 seconds period. The aggregate duration of control signals will not count quiet periods in between transmissions.
