

## 9. Restricted Band of Operation

### 9.1 Measurement procedure

[FCC 15.247(d), 15.205, 15.209, KDB 558074 D01 v04, Section 12.0]

Test was applied by following conditions.

Test method	: ANSI C63.10
Test place	: 3m Semi-anechoic chamber
EUT was placed on	: Styrofoam table / (W)1.0m x (D)1.0m x (H)0.8m (below 1GHz) Styrofoam table / (W)0.6m x (D)0.6m x (H)1.5m (above 1GHz)
Antenna distance	: 3m
Spectrum analyzer setting	
- Peak	: RBW=1MHz, VBW=3MHz, Span=Arbitrary setting, Sweep=auto
- Average	: RBW=1MHz, VBW=10Hz, Span=Arbitrary setting, Sweep=auto Display mode=Linear

#### Average Measurement Setting [VBW]

Mode	Duty Cycle (%)	T <sub>on</sub> (us)	T <sub>off</sub> (us)	Determined VBW Setting
IEEE802.11b	99.03	1022	10	10Hz (Duty Cycle $\geq$ 98%)
IEEE802.11g	99.27	1362	10	10Hz (Duty Cycle $\geq$ 98%)
IEEE802.11n(HT20)	99.07	1274	12	10Hz (Duty Cycle $\geq$ 98%)

Although these tests were performed other than open area test site, adequate comparison measurements were confirmed against 30 m open area test site.

Therefore sufficient tests were made to demonstrate that the alternative site produces results that correlate with the ones of tests made in an open field based on KDB 937606.

Radiated emission measurements are performed at 3m distance with the broadband antenna (Double ridged guide antenna). The antenna is positioned both the horizontal and vertical planes of polarization and height is varied 1m to 4m and stopped at height producing the maximum emission.

The EUT is Placed on a turntable, which is 0.8m/1.5m above ground plane. The turntable shall be rotated for 360 degrees to determine the position of maximum emission level. The test results represent the worst case emission for each emission with manipulating the EUT, support equipment, interconnecting cables and varying the mode of operation. Sufficient time for the EUT, support equipment, and test equipment are allowed in order for them to warm up to their normal operating condition.

#### - Test configuration

### 9.2 Limit

Emission at the boundary of the restricted band provided by 15.205 shall be lower than 15.209 limit.

### 9.3 Measurement Result

[IEEE802.11b, IEEE802.11g, IEEE802.11n (HT20)]

## 10. Transmitter Power Spectral Density

### 10.1 Measurement procedure

[FCC 15.247(e), KDB 558074 D01 v04, Section 10.2]

The peak power is measured with a spectrum analyzer connected to the antenna terminal, while EUT is operating in transmission mode at the appropriate center frequency.

The spectrum analyzer is set to;

- a) Span = 1.5 times the 6 dB bandwidth.
- b) RBW = 3kHz - 100kHz.
- c) VBW  $\geq 3 \times$  RBW.
- d) Sweep time = auto-couple.
- e) Detector = peak.
- f) Trace mode = max hold.

- Test configuration

### 10.2 Limit

The peak power spectral density shall not be greater than 8dBm in any 3kHz band.

### 10.3 Measurement result

Date : October 12, 2017  
 Temperature : 22.2 [°C]  
 Humidity : 52.5 [%]  
 Test place : Shielded room No.4

Test engineer : Tadahiro Seino

## 11. AC Power Line Conducted Emissions

### 11.1 Measurement procedure [FCC 15.207]

Test was applied by following conditions.

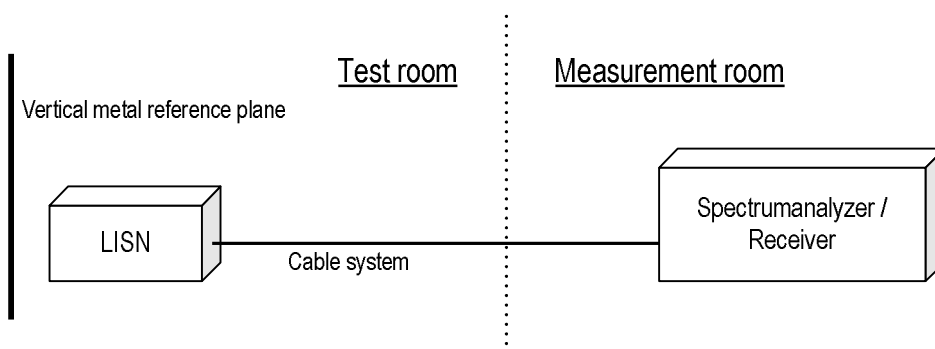

Test method	: ANSI C63.10
Frequency range	: 0.15MHz to 30MHz
Test place	: 3m Semi-anechoic chamber
EUT was placed on	: FRP table / (W)2.0m × (D)1.0m × (H)0.8m
Vertical Metal Reference Plane	: (W)2.0m × (H)2.0m 0.4m away from EUT
Test receiver setting	
- Detector	: Quasi-peak, Average
- Bandwidth	: 9kHz

EUT and peripherals are connected to 50Ω/50μH Line Impedance Stabilization Network (LISN) which are connected to reference ground plane, and are placed 80cm away from EUT. Excess of AC power cable is bundled in center.

LISN for peripheral is terminated in 50Ω.

EUT operating mode is selected to emit the maximum noise. Overall frequency range is investigated with spectrum analyzer using peak detector. Maximum emission configuration is determined by manipulating the EUT, peripherals, interconnecting cables. Then, emission measurements are performed with test receiver in above setting to each current-carrying conductor of the mains port. Sufficient time for EUT, peripherals and test equipment is provided in order for them to warm up to their normal operating condition. If the average limit is met when using a quasi-peak detector receiver, the EUT shall be deemed to meet both limits.

- Test configuration

### 11.2 Calculation method

Emission level = Reading + (LISN. Factor + Cable system loss)

Margin = Limit – Emission level

Example:

Limit @ 0.403MHz : 57.8dBμV(Quasi-peak)  
: 47.8dBμV(Average)

(Quasi peak) Reading = 22.7dBμV c.f = 10.4dB  
Emission level = 22.7 + 10.4 = 33.1dBμV  
Margin = 57.8 – 33.1 = 24.7dB

(Average) Reading = 6.5dBμV c.f = 10.4dB  
Emission level = 6.5 + 10.4 = 16.9dBμV  
Margin = 47.8 – 16.9 = 30.9dB

### 11.3 Limit

Frequency [MHz]	Limit	
	QP [dBuV]	AV [dBuV]
0.15-0.5	66-56*	56-46*
0.5-5	56	46
5-30	60	50

\*: The limit decreases linearly with the logarithm of the frequency in the range 0.15MHz to 0.5MHz.

## ***12. Antenna requirement***

---

According to FCC section 15.203, an intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device.

The antenna is a special antenna mounted inside of the EUT. Therefore, the EUT complies with the antenna requirement of FCC section 15.203.

### 13. Uncertainty of measurement

Expanded uncertainties stated are calculated with a coverage Factor  $k=2$ .

Please note that these results are not taken into account when measurement uncertainty considerations contained in ETSI TR 100 028-0011 determining compliance or non-compliance with test result.

Test item	Measurement uncertainty
Conducted emission, AMN (9kHz – 150kHz)	$\pm 3.8\text{dB}$
Conducted emission, AMN (150kHz – 30MHz)	$\pm 3.3\text{dB}$
Radiated emission (9kHz – 30MHz)	$\pm 3.0\text{dB}$
Radiated emission (30MHz – 1000MHz)	$\pm 4.7\text{dB}$
Radiated emission (1GHz – 6GHz)	$\pm 4.9\text{dB}$
Radiated emission (6GHz – 26GHz)	$\pm 5.2\text{dB}$
