NFC Specification

The RW function of the NFC works only in a KYL22 simple substance. When KYL22 is connected to the cables such as USB or an earphone, the function does not work. When KYL22 recognizes that a cable is connected, RW function of the NFC is invalidated automatically by firmware. At that time, the user cannot operate RW function on menus.

Sincerely,

Responsible Name: Yoshikazu Yamamoto
Title: manager of Quality Assurance Dept.
