Subject: Class II changes

Identifier: FCC ID: JPZ0061
IC: 2851A-JPZ0061

Equipment class: Low Power Transmitter

These products are being submitted for a class II change. The change is due to a modification to the software that controls when the devices transmit. When submitted, these devices would only transmit when the state of occupancy in a room changed. Due to safety concerns about the receiving device not receiving the command and leaving the lighting off in an occupied room, randomized polling transmissions were added to ensure integrity in the communication. The transmission time of these polling transmissions is less than 2 seconds per hour.
