Subject: Class II changes to JPZ0085 AND 2851A-JPZ0085

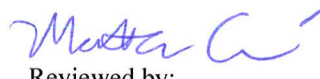

Identifier: FCC ID: JPZ0085
IC: 2851A-JPZ0085

Equipment class: RSS-210 Low Power Transceiver

The whip antenna, previously constrained on the front of the headrail, has been relocated to a bracket approximately 0.300" (7.3mm) off the back of the headrail. Matching components were updated to reflect the new antenna impedance. The placement changes are readily visible in the product photos included in the updated submission.
