Subject: Class II changes to JPZ0085 AND 2851A-JPZ0085

Identifier: FCC ID: JPZ0085  
IC: 2851A-JPZ0085

Equipment class: RSS-210 Low Power Transceiver

The whip antenna, previously 8.25" length has changed to 7". Also, it's placement in the shade has been changed from where it was previously constrained in a bracket approximately 0.300" (7.3mm) off the back of the headrail, has been relocated to one of three mounting configurations:

- 1) The front of the headrail
- 2) The back of EDU in a channel on the housing
- 3) In a channel on the battery carrier

Matching components were updated to reflect the new antenna impedance and the same BOM and schematic are used for all antenna placements. The placement changes are readily visible in the product photos included in the updated submission.
