

Antenna Specification

Applicable Model Numbers: (herein referred to as DUT)

BYRJ-EDU

Antenna construction: The antenna is a monopole type on a printed circuit board. The antenna connection on DUT cannot be modified or replaced by the user as it is soldered and underneath the plastic enclosure. The antenna is composed of a #24 AWG wire and measures seven inches in length. The antenna gain is -8.15dBd and is inherently accounted for in the field strength measurements.

Frequency range capability: 431MHz-437MHz
