To Whom It May Concern:

When the 80350 GSM module is incorporated into a final product of Trimble, Trimble will have the final product certified per FCC regulations governing system-level certifications. Additionally, for a so-called "mobile" device (as opposed to "portable" applications), if there is the intent to utilize the modem's certifications in lieu of any further certification at the final product level, then Trimble will put an explicit label such as "Contains FCC ID: JUP80350000A" on the final product.

Sincerely,

Brian Jackson
Hardware Engineer
