RE: BENQ Corporation

FCC ID: JVP56E05

After a review of the submitted information, I have a few comments on the above referenced Application.

Administrative Issues:

- 1) The block diagram appears to show the device is capable of all 4 modes (850, 900, 1800, 1900 MHz) but the application for FCC appears to only be for 1900. Please confirm which modes the phone is capable for purposes of grant notes. Note that operation in the 850 MHz is normally expected to be for US operation.
- 2) One of the jacks on the bottom appears to be a USB cable connector. If so, is this device intended to be able to be directly connected to a PC. Please confirm and if so, please note that certain labeling and manual information may need to be adjusted for a DoC. Additionally, if this may also be considered a PC peripheral than was the appropriate PC peripheral testing performed (note that this would require a minimum configuration with PC as given in ANSI C63.4)?
- 3) The operational description does not mention the GPRS class. Please confirm the GPRS class of this device.
- 4) Antenna conducted results from 30 MHz to 1 GHz do not appear to meet with the 1 MHz RBW requirement of 24.238(b).
- 5) The FCC typically asks that all combinations are repeated for different batteries, not just worse case. Please provide additional data or a strong justification as to why this was not provided.
- 6) FYI.....The AC power adapter should NOT be labeled with the FCC DoC logo. This device is not subjected to a DoC under Part 15 and should not be labeled as such.
