RE: BenQ Corporation

FCC ID: JVPAWL300

I have a few comments on this Application.

- 1.) The label drawing Exhibit is too small – label too grainy and unreadable. Please correct.
- 2.) Internal and External photos show label, but neither one shows an FCC ID. It is not necessary to change it assuming I can get a clear label which includes FCC ID: and the language of 15.19(a)(3).
- 3.) Please confirm your Confidentiality Request. Block diagram was not listed.
- 4.) FYI: Parts Lists are never required for unlicensed Part 15 devices. Please confirm if you want Parts List included with your Application. If you choose not, then Confidentiality Request will need to be modified to remove Parts List as a Confidential Exhibit.
- 5.) A small “rubber duck” style antenna is show on the RF Exposure exhibit [CP-21110BO-000?], but is not presented in any of the internal or external photos. Is this antenna part of the system?
- 6.) By my calculations, the Restricted Band Edge measurements of 15.205 may be very close. Please demonstrate how these meet the radiated emission limits below 2490 and above 2483.5MHz using 1MHz RBW. If this is explained elsewhere in the Test Report, please indicate where I may have missed it. My specific concern is this equipment meeting the 54dBuV limit when on Ch 11 at frequencies above 2483.5MHz.
- 7.) Manual is missing all required regulatory information. Please add information to user as defined in 15.21, and RF Exposure information warning all persons to maintain 20cm distance and prohibiting co-location with other transmitters.

Hope to hear from you soon.

William H. Graff  
President and Examining Engineer
