

American Telecommunications Certification Body Inc.
6731 Whittier Ave, McLean, VA 22101

March 10, 2006

RE: BenQ Corporation

FCC ID: JVPE61

I have a few comments on this Application. Depending on your responses, kindly understand there may be additional comments.

- 1.) The Tune Up procedure seems to indicate that the expected conducted RF Pout is +32dBm. This is much greater than that reported in the Part 24 EMC report and the SAR report. Please review and address this discrepancy.
- 2.) This device appears to have provisions to attach a USB cable to a computer. Therefore this device will qualify as a Class B computer peripheral. Please provide evidence of DoF or, alternately, a Part 15B Certification report.
- 3.) According to the Operational Description, this tri-band phone appears to contain GSM 900 and DCS 1800 MHz functions that are not available in USA.. However, the Block Diagram seems to indicate there are many additional bands which also have the potential to be implemented. Please explain.

William H. Graff
President and Director of Engineering
