May 24, 2006

RE: BenQ Corporation

FCC ID: JVPEF91

I have a few comments on this Application. Depending on your responses, kindly understand there may be additional comments.

- 1.) Kindly look over the Tune Up procedures for this device. I see target values for WCDMA, but nothing comparable for 1800MHz GSM. Please provide a listing of RF power tuning values and their tolerance.
- 2.) Please look at the SAR report, Appendix A. The body worn plot with timestamp 15:43 April 20 appears to show two hot spots. Were both of these hot spots thoroughly investigated? If so, can you provide documentation of this test?
- 3.) The Test Setup photographs do not show AC powerline conducted setup. All Part 15C Bluetooth reports must show a corresponding AC powerline conducted emissions setup. Please provide.

William H. Graff  
President and Director of Engineering

The items indicated above must be submitted before processing can continue on the above referenced application. Failure to provide the requested information may result in application termination. Correspondence should be considered part of the permanent submission and may be viewed from the Internet after a Grant of Equipment Authorization is issued.

Please do not respond to this correspondence using the email reply button. In order for your response to be processed expeditiously, you must submit your documents through the AmericanTCB.com website. Also, please note that partial responses increase processing time and should not be submitted.

Any questions about the content of this correspondence should be directed to the sender.
