

Operational Description

The transmitter of the EUT (Interactive Pen) is powered by 3.3Vdc from battery. The device used the MSK modulation type which the operational frequency range from 2402 ~2 479MHz. The type of antenna is Printed Antenna with -6.95dBi gain.

The output power of this device is very low. Under normal use condition, the transmitter and the receiver are quite close, so high EIRP power is neither necessary nor allowed because of interference.
