SIM card and battery

About your SIM card

When you subscribe to your network operator, you receive a SIM (Subscriber Identity Module) card containing your registration information, PIN code, etc.
Like a credit card, it should be kept secure and handled carefully. Do not bend, scratch or expose it to moisture. Avoid static electricity.
To avoid corrupting your SIM card's memory, always switch off your phone before removing or inserting your SIM card.

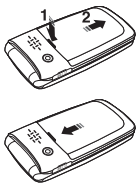
About your battery

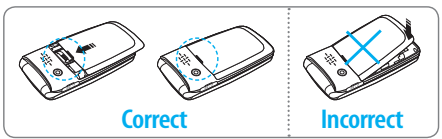
Your phone uses a Li-Ion battery. Make sure to use an authorized battery and charger only. For more details, please inquire at your nearest dealer.

note: Your phone is powered by a Lithium Ion (Li-Ion) battery. This means that, unlike other forms of battery technology, you can recharge your battery while some charge remains without reducing your phone's autonomy due to the "battery memory effect" inherent in those technologies.

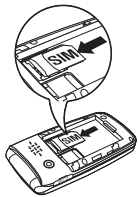
Installing/removing SIM card and battery

1. Remove the battery cover from the unit. To fit the battery cover, put it on the guide rail and push up.

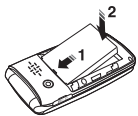




2. Insert the SIM card into the slot. The gold contacts of the SIM card should go against the metal contacts of the phone.

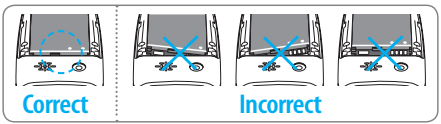


Put the contacts of the battery into the hole located at the bottom of the unit and then insert

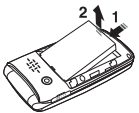


and press the upper side of the battery until you hear the "click". Make sure you align the gold contacts at the battery end with contacts on the phone. If the

contacts at the battery are not properly aligned, damage could occur to the phone and the battery.

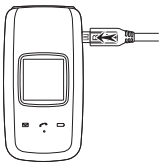


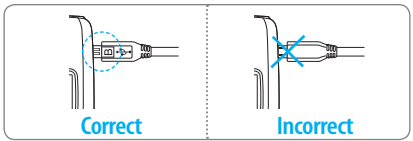
3. To remove the battery push the bottom of the battery to upwards (1) and remove (2) the battery.
   Push the SIM card in the arrow direction as shown.

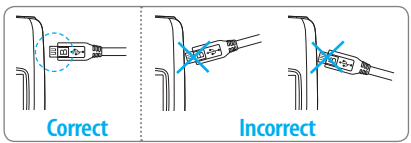


To charge your battery

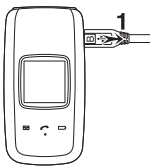
1. To charge, connect the charger adapter as shown right.







2. To remove the adapter connecting, pull the adapter away as shown right.



Turning the phone on/off

To turn on

1. Press and hold END.

To turn off

1. Press and hold END.
