Letter of Attestation

Model: TM-D710GA Scanning receiver (FCC ID: K44397700)

This letter attests to the fact that KENWOOD scanning receiver model TM-D710GA meets the requirements of the FCC Rules, 15.121(a). Compliance is achieved through the following method(s):

- (1). The Microprocessor employed has internal flash memory, however the programming information cannot be read out from the Microprocessor, therefore it has same means of protection as a masked Microprocessor .
- (2). The Microprocessor is not to accept programming, selection, scanning or direct entry of Cellular band frequencies.
- (3). Filtering precludes reception of mixer images or harmonics of Cellular band frequencies.
- (4). Subminiature SMD assembly and inaccessible multiplayer PCB construction all but precludes attempts at circuit hardware modifications.
