**Re: FCC ID K4BAP01 Reply to Correspondence Reference Number 19280**  
**Item 3) Justification of Professional Installation**

Dear Mr. Dichoso,

This is to confirm that the marketing or sale of the I.WiLL 300-24 AP product will be restricted to authorized dealers and will not be offered for sale to the general public, through retail outlets or by mail order. The high-end price range of the product makes it prohibitive for general public sale.

The application for use is for commercial and industrial deployment and it is not intended for use by the general public.

As noted in the user manual, this equipment requires professional installation by experienced radio personnel. These must be knowledgeable about the radiated power requirements and restrictions under FCC 47 CFR Part 15 rules for intentional radiators.

Operation, configuration and optimization of the equipment requires special authorized password protected access, as well as, knowledge of RF system link budgets and understanding of field strength and radio signal quality indicators. The entire user interface is suited to personnel who are technically competent in its use and training is recommended and available to augment proper use and installation.

I trust this satisfies your query with respect to professional installation.

Yours truly,

Eric Godberson – Manager, Hardware Development & Technical Advisor, Regulatory  
Wi-LAN, Inc.
