1.4 Measurement uncertainty

The treatment of uncertainty is based on the general matters on the definition of uncertainty in “Guide to the expression of uncertainty in measurement (GUM)” published by ISO. The Lab’s uncertainty is determined by referring UKAS Publication LAB34: 2002 “The Expression of Uncertainty in EMC Testing” and CISPR16-4-2: 2011 “Uncertainty in EMC Measurements”.

The uncertainty of the measurement result in the level of confidence of approximately 95% ($k=2$) is as follows;

2 Test procedure and test data

2.1 Radiated spurious emissions (Transmitter test)

Test setup

Test setup was implemented according to the method of ANSI C63.4: 2003 clause 6 “General requirements for EUT equipment arrangements and operation”, clause 8.2 and Annex H.3 “Radiated emission measurements setup”.

Test procedure

Measurement procedures were implemented according to the method of TIA-603-C clauses 2.2.12.2.

- a) Antenna terminal of the EUT is terminated with a nonradiating load.
- b) Adjust the spectrum analyzer as below.
 - 1) RBW = 10 kHz (below 1 GHz), 1 MHz (above 1 GHz)
 - 2) VBW = 300 kHz (below 1 GHz), 3 MHz (above 1 GHz)
 - 3) Sweep speed slow enough to maintain measurement
 - 4) Detector mode : Peak
- c) Place the EUT on the turntable. The EUT set Tx ON in max power level
- d) For each spurious frequency that was found, the test antenna is raised and lowered from 1 to 4 m to obtain a maximum level on the spectrum analyzer. Then the turntable should be rotated 360 deg to determine the maximum reading.
- e) Repeat step d) for each spurious frequency with the test antenna polarized vert/hori.
- f) The EUT was replaced with substitution antenna and signal generator.
- g) Feed the substitution antenna at the transmitter end with signal generator connected to the antenna by means of a nonradiating cable. With the antennas at both ends horizontally polarized, and with the signal generator tuned to a particular spurious frequency, raise and lower the test antenna to obtain a maximum reading at the spectrum analyzer. Adjust the level of the signal generator output until the previously recorded maximum reading for this set of conditions is obtained. This should be done carefully repeating the adjustment of the test antenna and generator output.
- h) Repeat step g) with both antennas vertically polarized for each spurious frequency.
- i) Calculate power in dBm erp as below.

$$\text{Spurious emission level} = \text{Antenna input level [dBm]} + \text{Substitution antenna gain [dBd]}$$

Applicable rule and limitation

Part 80.211 (f) (3) Radiated emission limits

$$\text{Limit Level} = \text{Po [dBm]} - (43 + 10 \log (\text{Po [W]})) = - 13 \text{ [dBm erp]}$$

2.2 Radiated emissions (Receiver test)

Test setup

Test setup was implemented according to the method of ANSI C63.4: 2003 clause 6 “General requirements for EUT equipment arrangements and operation”, clause 8.2 and Annex H.3 “Radiated emission measurements setup”.

Test procedure

Measurement procedures were implemented according to the method of ANSI C63.4: 2003 clauses 8.2. The EUT is placed on a non-conducted table which is 0.8 m height from a ground plane and the measurement antenna to EUT distance is 3 meters. The turn table is rotated for 360 degrees to determine the maximum emission level.

The antenna height scanned between 1 m and 4 m, and the antenna rotated to repeat the measurements for both the horizontal and vertical antenna polarizations.

The spectrum analyzer and receiver are set to the followings;

RBW=100 kHz, VBW= 300 kHz

Final measurement is carried out with a receiver RBW of 120 kHz (QP)

Applicable rule and limitation

RSS-Gen clauses 6.1: Radiated emission limits

Frequency [MHz]	Field Strength [$\mu\text{V}/\text{m}$]	Measurement Distance [m]	Field Strength [$\text{dB}\mu\text{V}/\text{m}$]
30 – 88	100	3	40.0
88 – 216	150	3	43.5
216 – 960	200	3	46.0
Above 960	500	3	53.9

In the emission table above, the tighter limit applies at the band edges.

The emission limits shown in the above table are based on measurements employing a quasi-peak detector.
