TEST REPORT

For EMC

Report Reference No......: CHTW24070097 Report verification :

Project No.: SHT2407005804W

FCC ID...... K6630653Y3D

Applicant's name...... YAESU MUSEN CO., LTD.

Address Omori Bellport D building 3F, 6-26-3 Minamioi, Shinagawa-ku,

Tokyo 140-0013 Japan

Test item description VHF FM Marine Transceiver

Trade Mark Standard Horizon

Model/Type reference GX1410GPS

Listed Model(s)..... GX1410

Standard: IEC60945:2002

Date of receipt of test sample...... Jul.09, 2024

Result...... PASS

Compiled by

(position+printed name+signature) .: File administrators Caspar Chen

Supervised by

(position+printed name+signature) .: Project Engineer Caspar Chen

Carpar Chen

Approved by

(position+printedname+signature) ...: RF Manager Xu Yang

Address Building 7, Baiwang Idea Factory, No.1051, Songbai Road,

1. Test standards and Report version

1.1. Test Standards

The tests were performed according to following standards: IEC60945:2002—Maritime navigation and radiocommunication equipment and systems -General requirements -Methods of testing and required test result

1.2. Report version

Version No.	Date of issue	Description
N/A	2024-07-23	Original

Report No.: CHTW24070097 Page 4 of 31 Issued: 2024-07-23

2. Test Description

Emission					
Test item	Standards requirement (IEC60945)	Result	Test Engineer		
Conducted emissions	Sub-clause 9.2	Pass	Junman Wang		
Radiated emissions	Sub-clause 9.3	Pass	Yifan Wang		
In	nmunity				
Test item	Standards requirement (IEC60945)	Result	Test Engineer		
Conducted radio frequency disturbance	Sub-clause 10.3	Pass	Chuanfeng Li		
Radiated disturbance	Sub-clause 10.4	Pass	Jianjun Liang		
Fast transients (bursts)	Sub-clause 10.5	Pass	Jian Li		
Slow transients (surges)	Sub-clause 10.6	N/A	-		
Power supply transients	Sub-clause 10.7	N/A	-		
Power supply variations and failure	Sub-clause 10.8	N/A	-		
Electrostatic discharge	Sub-clause 10.9	Pass	Jian Li		
Enviro	nmental Test				
Test item	Standards requirement (IEC60945)	Result	Test Engineer		
Dry heat	Sub-clause 8.2	Pass	Yifan Wang		
Damp heat	Sub-clause 8.3	Pass	Yifan Wang		
Low temperature	Sub-clause 8.4	Pass	Yifan Wang		
Vibration	Sub-clause 8.7	Pass	Yifan Wang		

Note: The measurement uncertainty is not included in the test result.

Report No.: CHTW24070097 Page 5 of 31 Issued: 2024-07-23

3. Summary

3.1. Client Information

Applicant:	YAESU MUSEN CO., LTD.
Address:	Omori Bellport D building 3F, 6-26-3 Minamioi, Shinagawa-ku, Tokyo 140-0013 Japan
Manufacturer:	YAESU MUSEN CO.,LTD.
Address:	43 Utsuroda, Morijuku, Sukagawa-shi,Fukushima 962-0001 Japan

3.2. Product Description

Main unit				
Name of EUT:	VHF FM Marine Transe	ceiver		
Trade mark:	Standard Horizon			
Mode No.:	GX1410GPS			
Listed Model(s):	GX1410			
Power supply:	DC 13.8V			
Hardware Version:	N/A			
Software Version:	N/A			
RF Specification				
Operation Fraguency Benge:	TX:156.025MHz to 157.425MHz			
Operation Frequency Range:	RX:156.050MHz to 162.000MHz			
Rated Output Power:	⊠ High Power: 25W			
Madulation Type	Analog:	FM		
Modulation Type:	Digital Data(DSC):	AFSK		
Ohannal Cananatian	Analog:	⊠ 25kHz		
Channel Separation:	Digital Data(DSC):	⊠ 25kHz		
Emission Designator: *1	Analog:	16K0G3E		
Emission Designator.	Digital Data(DSC):	16K0G2B		

Note:

(1) *1 According to FCC Part 2.202 requirements, the Necessary Bandwidth is calculated as follows:

- For FM Voice Modulation

Channel Spacing = 25 KHz, D = 5KHz max, K = 1, M = 3KHz

Bn = 2M + 2DK = 2*3 + 2*5*1 =**16 KHz**

Emission designation: 16K0G3E

Digital Data(DSC)

Channel Spacing = 25 KHz, D = 5KHz max, K = 1, M = 3KHz

Bn = 2M + 2DK = 2*3 + 2*5*1 =**16 KHz**

Emission designation: 16K0G2B

3.3. EUT operation mode

Test mode	Transmitting	Pagairing	Power level		
restillode	Transmitting	Receiving	High	Low	
TX-AWH	√		√		
TX-AWL	√			√	
TX-DSC	√		√		
RX-AW		√			
RX-DSC		√			

 $[\]sqrt{\ }$: is operation mode.

3.4. Support unit used in test configuration and system

The EUT has been associated with peripherals and configuration operated in a manner tended to maximize its emission characteristics in a typical application.

The following peripheral devices and interface cables were connected during the measurement:

Whether support unit is used?							
✓	✓ No

2							

Report No.: CHTW24070097 Page 7 of 31 Issued: 2024-07-23

4. Test Environment

4.1. Address of the test laboratory

Laboratory Name	Shenzhen Huatongwei International Inspection Co., Ltd.				
Laboratory Location	Building 7, Baiwang Idea Factory, No.1051, Songbai Road, Yangguang Community, Xili Subdistrict, Nanshan District, Shenzhen, Guangdong, China				
Connect information:	Tel: 86-755-26715499 E-mail: cs@szhtw.com.cn http://www.szhtw.com.cn				
	Type Accreditation Number				
Qualifications	FCC Registration Number	762235			
	FCC Designation Number	CN1181			

4.2. Environmental conditions

During the measurement the environmental conditions were within the listed ranges:

Normal Temperature:	25°C		
Relative Humidity	55 %		
Air Pressure	989 hPa		

4.3. Statement of the measurement uncertainty

No.	Test Items	Measurement Uncertainty
1	Radiated Emission	4.54dB for 30MHz-1GHz 5.10dB for above 1GHz
2	Conducted emissions	3.21dB
3	Radio frequency electromagnetic field 80-6000MHz	12.3%
4	Electrostatic Discharge	-
5	Temperature	1°C
6	Humidity	5%

This uncertainty represents an expanded uncertainty expressed at approximately the 95% confidence level using a coverage factor of k=1.96.

Report No.: CHTW24070097 Page 8 of 31 Issued: 2024-07-23

5.2. IMMUNITY

Performance criteria

No change of the actual operational states of the test objects is allowed. However, temporary change is allowed during the power supply failure test.

In addition, the following generic acceptance criteria for compliance were in force during the EMC immunity testing:

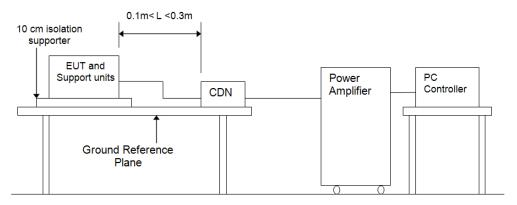

- Performance Criterion A: (For continuous phenomena): The EUT shall continue to operate as intended during and after the test. No degradation of performance or loss of function is allowed as defined in the relevant equipment standard and in the technical specification published by the manufacturer.
- Performance Criterion B: (For transient phenomena): The EUT shall continue to operate as intended after the tests. No degradation of performance or loss of function is allowed as defined in the technical specification published by the manufacturer. During the test, degradation or loss of function or performance which is self-recoverable is, however, allowed but no change of actual operating state or stored data is allowed.
- Performance Criterion C: Temporary degradation or loss of function or performance is allowed during and after the test, provided the function is selfrecoverable, or can be restored by the operation of the controls as defined in the relevant equipment standard and in the technical specification published by the manufacturer.

5.2.1. Conducted radio frequency disturbance

PERFORMANCE CRITERION

Performance criterion: A.

TEST CONFIGURATION

TEST PROCEDURE

Please refer to IEC60945 Clause 10.3.2 for the measurement methods

TEST MODE

Please reference to the section 3.3

TEST RESULTS

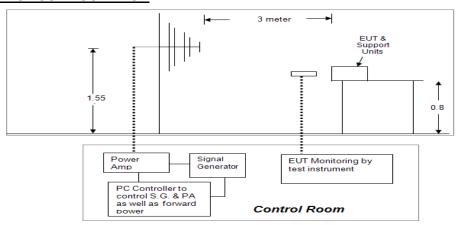

Test mode:	All modes					
Injected Position	Observations (Performance Criterion)	Criteria Level	Result			
DC power ports	No degradation in performance of the EUT was observed. (A)	А	Pass			

5.2.2. Radiated radio frequencies

PERFORMANCE CRITERION

Criteria A

TEST CONFIGURATION

TEST PROCEDURE

Please refer to IEC60945 Clause 10.4.2 for the measurement methods

TEST MODE

Please reference to the section 3.3

TEST RESULTS

Please refer to the below test data:

Test mode	All mod	All modes						
Frequency	Level	Modulation	Antenna Polarization	EUT Face	Observations (Performance Criterion)	Result		
			V	Front	Α	Pass		
			Н	FIOIIL	Α	Pass		
		400 Hz sine wave, 80 % AM, 1 % increment, dwell time=3seconds	V	Rear	Α	Pass		
	10 V/m		Н	Real	Α	Pass		
			V	Left	Α	Pass		
			Н	Leit	Α	Pass		
80 MHz-2 GHz	10 7/111		V	Diaht	Α	Pass		
			Н	Right	Α	Pass		
			V	Ton	Α	Pass		
			Н	Тор	Α	Pass		
			V	Bottom	A	Pass		
			Н	DOMOTH	А	Pass		

Remark: A: No degradation in performance of the EUT was observed.

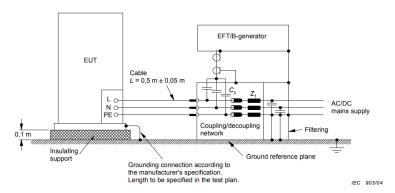

5.2.3. Fast transients (bursts)

PERFORMANCE CRITERION

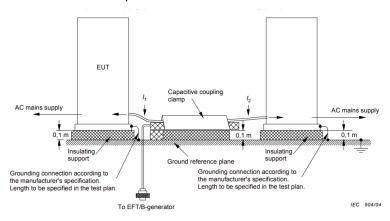

Criteria B

TEST CONFIGURATION

AC Main / DC power input port:

Telecommunication port:

TEST PROCEDURE

Please refer to IEC60945 Clause 10.5.2 for the measurement methods

TEST MODE

Refer to the section 3.3

TEST RESULTS

Refer to the below test data:

Test mode:		All modes			
Port	Lead under Test	Coupling Direct / Clamp	Observations (Performance Criterion)	Criteria Level	Result
DC Power	Positive	Direct	# (A)	В	Pass
Port	Negative	Direct	# (A)	В	Pass

Note:

#: No degradation in performance of the EUT was observed

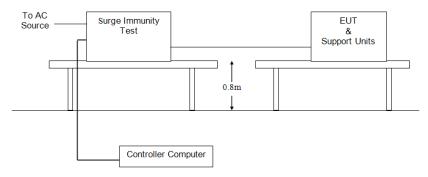

5.2.4. Slow transients (surges)

PERFORMANCE CRITERION

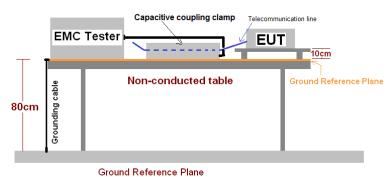

Criteria B

TEST CONFIGURATION

AC Main power input port:

Telecommunication port:

TEST PROCEDURE

Please refer to IEC60945 Clause 10.6.3 for the measurement methods

TEST MODE

Refer to the section 3.3

TEST RESULTS

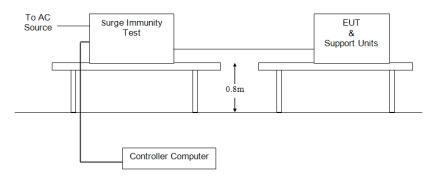

Note: EUT belongs to DC power supply

5.2.5. Power supply transients

PERFORMANCE CRITERION

Criteria B

TEST CONFIGURATION

TEST PROCEDURE

Please refer to IEC60945 Clause 10.7.3 for the measurement methods

TEST MODE

Please reference to the section 3.3

TEST RESULTS

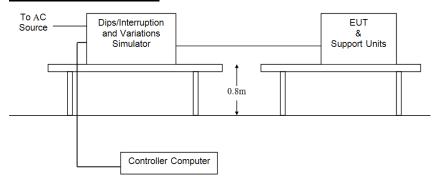

Note: EUT belongs to DC power supply

5.2.6. Power supply variations and failure

PERFORMANCE CRITERION

Criteria A for Power supply variations Criteria C for Power supply failure

TEST CONFIGURATION

TEST PROCEDURE

Please refer to IEC60945 10.8.3 for the measurement methods

TEST MODE

Please reference to the section 3.3

TEST RESULTS

Note:EUT belongs to DC power supply

5.2.7. Electrostatic Discharge

PERFORMANCE CRITERION

Criteria B

TEST CONFIGURATION

Ground Reference Plane₽

TEST PROCEDURE

Please refer to IEC60945 Clause 10.9.2 for the measurement methods

Contact Discharge:

The ESD generator is held perpendicular to the surface to which the discharge is applied and the tip of the discharge electrode touch the surface of EUT. Then turn the discharge switch. The generator is then retriggered for a new single discharge and repeated at least 10 times for each pre-selected test point. This procedure shall be repeated until all the air discharge completed.

Air Discharge:

Air discharge is used where contact discharge can't be applied. The round discharge tip of the discharge electrode shall be approached as fast as possible to touch the EUT. After each discharge, the discharge electrode shall be removed from the EUT. The generator is then re-triggered for a new single discharge and repeated at least 10 times for each pre-selected test point. This procedure shall be repeated until all the air discharge completed.

Indirect discharge for horizontal coupling plane:

At least 10 single discharges shall be applied to the horizontal coupling plane, at points on each side of the EUT.

Indirect discharge for vertical coupling plane:

At least 10 single discharges shall be applied to the center of one vertical edge of the coupling plane. The coupling plane, of dimensions 0.5m X 0.5m, is placed parallel to, and positioned at a distance of 0.1m from the EUT. Discharges shall be applied to the coupling plane, with this plane in sufficient different positions that the four faces of the EUT are completely illuminated.

TEST MODE

Please reference to the section 3.3

TEST RESULTS

Test mode All modes						
Direct discharge						
Type of discharge	Discharge voltage (kV)	Observations Performance	CriteriaLevel	Result

5.3. Environmental Test

5.3.1. Dry heat

TEST METHOD

Storage Test: The EUT shall be placed in a chamber at normal room temperature and relative humidity. The temperature shall then be raised to and maintained at +70 °C ± 3 °C, for a period of 10 h to 16 h. At the end of the test, the EUT shall be returned to normal environmental conditions and then subjected to a performance

Functional test: The EUT shall be placed in a chamber at normal room temperature and relative humidity. The EUT and, if appropriate, any climatic control devices with which it is provided shall then be switched on. The

temperature shall then be raised to and maintained at $+55$ °C \pm 3 °C. At the end of a soak period of 10 h to 16 h at $+55$ °C \pm 3 °C, the EUT shall be subjected to a performance test and check. The temperature of the chamber shall be maintained at $+55$ °C \pm 3 °C during the whole performance test
period. At the end of the test, the EUT shall be returned to normal environmental conditions.
TEST RESULTS
□ Not Applicable
No degradation of performance or loss of function was observed.
5.3.2. Damp heat
TEST METHOD
Functional test: The EUT shall be placed in a chamber at normal room temperature and relative humidity. The temperature shall then be raised to ± 40 °C ± 2 °C, and the relative humidity raised to ± 3 % over a period of 3 h ± 0.5 h. These conditions shall be maintained for a period of 10 h to 16 h. Any climatic control devices provided in the EUT may be switched on at the conclusion of this period. The EUT shall be switched on 30 min later, or after such period as agreed by the manufacturer, and shall be kept operational for at least 2 h during which period the EUT shall be subjected to a performance check as specified in the relevant equipment standard. The temperature and relative humidity of the chamber shall be maintained as specified during the whole test period. At the end of the test period and with the EUT still in the chamber, the chamber shall be brought to room temperature in not less than 1 h. At the end of the test the EUT shall be returned to normal environmental conditions.
TEST RESULTS
No degradation of performance or loss of function was observed.

Report No.: CHTW24070097 Page 28 of 31 Issued: 2024-07-23

5.3.3. Low temperature

TEST METHOD

Functional test: The EUT shall be subject to the conditions specified for portable equipment except that the temperature of the chamber shall be reduced to, and maintained at -15 °C \pm 3 °C. The EUT shall be switched on 30 min later, or after such period as agreed by the manufacturer, and shall be kept operational for at least 2 h during which period the EUT shall be subjected to a performance check test and check

\boxtimes	Passed	П	Not	Αp	plical	ble
\sim	. acca	-		, VP	PII CA	\sim

No degradation of performance or loss of function was observed.

5.3.4. Vibration

TEST METHOD

The EUT, complete with any shock and vibration absorbers with which it is provided, shall be fastened to the vibration table by its normal means of support and in its normal attitude. The EUT may be resiliently suspended to compensate for weight not capable of being withstood by the vibration table. Provision may be made to reduce or nullify any adverse effect on EUT performance which might be caused by the presence of an electromagnetic field due to the vibration unit.

The EUT shall be subjected to sinusoidal vertical vibration at all frequencies between:

- 2 Hz to 5 Hz and up to 13,2 Hz with an excursion of ± 1 mm \pm 10 %

(7 m/s₂ maximum acceleration at 13,2 Hz);

- above 13,2 Hz and up to 100 Hz with a constant maximum acceleration of 7 m/s2.

The frequency sweep rate shall be 0,5 octaves/min in order to allow the detection of resonances in any part of the EUT as mounted.

A resonance search shall be carried out throughout the test. During the resonance search the EUT shall be externally observed, by unaided visual and aural means, for obvious signs of any resonances of components or sub-assemblies, that may affect the integrity of the EUT. Such observations shall be recorded in the test report. If any resonance, as measured by a sensor fixed to the outside of the EUT at the location where obvious signs of resonance have been observed, has a magnitude ratio $\varepsilon 5$ measured relative to the surface where the EUT is fastened, the EUT shall be subjected to a vibration endurance test at each resonant frequency at the vibration level specified in the test with a duration of 2 h. When resonant frequencies with magnitude ratios $\varepsilon 5$ are harmonically related, only the fundamental frequency shall be tested. If no resonance with a magnitude ratio $\varepsilon 5$ occurs, the endurance test shall be carried out at one single observed frequency. If no resonance occurred, the endurance test shall be carried out at a frequency of 30 Hz. Performance check(s) shall be carried out at least once during each endurance test period, and once before the end of each endurance test period.

TEST RESULTS

oxtimes Passed	☐ Not Applicable

No degradation of performance or loss of function was observed.
