

Re: FCC ID K66VX-900U
Applicant: Vertex Standard Co.,
Ltd.
Correspondence Reference Number: 18215
731 Confirmation Number: EA99468

1. Please review item No. 3 of previous correspondence. A WARNING/CAUTION statement has been requested, not an Important Note. An Important Note is insufficient for something that needs a 50% duty factor to comply with the much higher occupational SAR limit.

[Please see that New manual uploaded 2-28-01](#)

2. In the proposed Important Note, the first circular bullet needs the following revision -
(a) first line, "in an uncontrolled exposure environment", add exposure
(b) third line, end of sentence, "the radio operator must have knowledge to control his or her RF exposure conditions"; change its to his or her.

[Please see new manual uploaded 2-28-01](#)

3. Please review item No. 3 of previous correspondence regarding body-worn statements. SAR compliance for body-worn use has only been demonstrated for the specific belt-clip tested for this filing. Other body-worn accessories/configurations may not comply and should be avoided. Please modify the training info accordingly. (also see item #4)

[Leather Case option removed](#)

4. Item No. 5 of previous correspondence regarding the leather case has not been fully addressed. There is no SAR data to support body-worn use with this leather case or in conjunction with any specific belt-clip. The metallic buttons on the leather case may have the potential to modify SAR, please clarify.

[Leather Case option removed](#)

5. The reply to the correspondence is for another filing, EA 99480. This filing is EA 99468. Please re-submit reply.
