ILAC / A2LA

Compliance Testing, LLC, has been accredited in accordance with the recognized International Standard ISO/IEC 17025:2005. This accreditation demonstrates technical competence for a defined scope and the operation of a laboratory quality management system (refer joint ISO-ILAC-IAF Communiqué dated January 2009).

The tests results contained within this test report all fall within our scope of accreditation, unless noted in the table below

Please refer to <http://www.compliancetesting.com/labscope.html> for current scope of accreditation.

Standard Test Conditions Engineering Practices

Except as noted herein, the following conditions and procedures were observed during the testing:

All tests and measurement data shown were performed in accordance with FCC Rules and Regulations, Volume II; Part 2, Sub-part J, Sections 2.947, 2.1033(c), 2.1041, 2.1046, 2.1047, 2.1051, 2.1053, 2.1055, 2.1057 and the following individual Parts: FCC Part 87.

Measurement results, unless otherwise noted, are worst-case measurements.

EUT Description

Model: A781-310

P/N: 1394-A-3100

Description: A781 SATCOM Transceiver

Software: LI-4394.21028, Version: J00, DO-178B Level D

Serial Number: 740

Additional Information:

The EUT is a SATCOM transceiver that operates from 1626.5 – 1660.5 MHz.

It has 3 types of emissions, BPSK, QPSK, QAM that are defined in the Table below.

The data in this test report is for a Class 2 Permissive Change (C2PC) to the original filing.

The C2PC is for part obsolescence. 3 power amplifier chips and a digital attenuator were replaced with form, fit, function replacement parts. The new parts did not alter the operating characteristics of the original filing.

Output power, Emission Masks, and Conducted Spurious Emissions were performed to support this C2PC.

EUT Operation during Tests

The manufacturer was present during the test and controlled the EUT via a custom GUI to set the type of service, data rate, and power levels.

Carrier Output Power (Conducted)

Engineer: Greg Corbin

Test Date: 11/1/2017

Test Procedure

The Equipment Under Test (EUT) was connected directly to a spectrum analyzer with the RBW set to 1 MHz and the VBW set to 3 X RBW which set the RBW greater than the transmit signal ensuring there was no signal suppression while measuring a modulated signal. The peak readings were taken for each modulation type and the result was then compared to the limit.

Conducted Spurious Emissions

Engineer: Greg Corbin

Test Date: 11/2/2017

Test Procedure

The EUT was connected directly to a spectrum analyzer to verify that the UUT met the requirements for spurious emissions. The RBW was set according to the requirements of 87139 (i)(1). The dBc limit, the DLNA rejection, and output power were summed together to determine the necessary dBm value of the EUT to provide a system rejection greater than the FCC limit. This necessary value was compared to the measured value to ensure compliance to the specification, which is expressed as the margin. A negative value indicates a passing result.

Refer to Annex A for Conducted Spurious Emission Plots

Emission Masks (Occupied Bandwidth)

Engineer: Greg Corbin

Test Date: 11/1/2017

Test Procedure

The EUT was connected directly to a spectrum analyzer to verify that the EUT meets the required emissions mask. A reference level plot is provided to verify that the peak power was established prior to testing the mask. The transmitter is digital modulation therefore no data input is required to measure the emission mask. The RBW was set as close as possible to 1% of the occupied bandwidth to ensure accurate readings.

Test Setup

Refer to Annex B for Emission Mask Test plots.

Test Equipment Utilized

Description	Manufacturer	Model #	CT Asset #	Last Cal Date	Cal Due Date
Humidity / Temp Meter	Newport	IBTHX-W-5	i00282	6/9/17	6/9/18
Spectrum Analyzer	Textronix	RSA5126A	i00424	5/3/17	5/3/18
PSA Spectrum Analyzer	Agilent	E4445A	i00471	9/6/17	9/6/18

In addition to the above listed equipment standard RF connectors and cables were utilized in the testing of the described equipment. Prior to testing these components were tested to verify proper operation.
