

Giant Electronics Ltd.

Application For Certification

Two Way Radio with GMRS, FRS, and Weather Band Receiver

(FCC ID: K7GMRCEJ)

HK08111026-1 TL/ ac December 22, 2008

- The test report only allows to be revised the retention period issued date unless further standard or the requirement was noticed.

This report is for the exclusive use of Intertek's Client and is provided pursuant to the agreement between Intertek and its Client. Intertek's responsibility and liability are limited to the terms and conditions of the agreement. Intertek assumes no liability to any party, other than to the Client in accordance with the agreement, for any loss, expense or damage occasioned by the use of this report. Only the Client is authorized to permit copying or distribution of this report and then only in its entirety. Any use of the Intertek name or one of its marks for the sale or advertisement of the tested material, product or service must first be approved in writing by Intertek. The observations and test results in this report are relevant only to the sample tested. This report by itself does not imply that the material, product, or service is or has ever been under an Intertek certification program.

EXHIBIT 1

GENERAL DESCRIPTION

1.0 General Description

1.1 Product Description

The Equipment Under Test (EUT) is a Two Way Radio with GMRS, FRS, and Weather Band Receiver. GMRS and FRS radio operates between 462.5500MHz and 467.7125MHz. Weather band receiver operates between 161.650 MHz and 162.550 MHz. The EUT is powered by 3.6V ($1 \times 3.6V$ "Ni-MH" type rechargeable battery) or 4.5V ($3 \times$ "AA" size 1.5V alkaline batteries). Power adaptor, USB port from computer and charging cradle can be alternative power sources.

Transmitter Portion

(i)	Type of Emission	:	GMRS: 5K72F3E; FRS: 5K64F3E
(ii)	Frequency Range	:	GMRS 15 Channels from 462.5500MHz to 462.7250MHz
			FRS 7 Channels from 467.5625MHz to 467.7125MHz
(iii)	Maximum Power Rating	:	GMRS: 1.92W ERP; FRS: 0.33W ERP
(iv)	Antenna Type	:	Integral
(v)	dc voltage of radio frequ	lei	ncy amplifying device: 4.5V
	dc current of radio frequ	er	ncy amplifying device: 1000mA

The brief circuit description is saved with filename: descri.pdf

1.2 Related Submittal(s) Grants

This are two Applications for Certification of the transmitter portion of a GMRS + FRS Transceiver and weather band receiver respectively. The receiver section of this Transceiver is subject to verification process.

1.3 Test Methodology

Radiated emission measurements were performed according to the procedures in ANSI C63.4 (2003) and ANSI/TIA-603-C-2004. All measurement were performed in Open Area Test Sites. Preliminary scans were performed in the Open Area Test Sites only to determine worst case modes. All Radiated tests were performed at an antenna the EUT distance of 3 meters, unless stated otherwise in the "**Justification Section**" of this Application.

1.4 Test Facility

The open area test site used to collect the emission data is located at Garment Centre, 576 Castle Peak Road, Kowloon, Hong Kong. The test facility and site measurement data have been fully placed on file with the FCC.

EXHIBIT 2

SYSTEM TEST CONFIGURATION

2.0 System Test Configuration

2.1 Justification

The device was configured for testing in a typical fashion (as a customer would normally use it). The device was placed on a turntable, which enabled the engineer to maximize emissions through its placement in the three orthogonal axes. The device has been tested with headset and without headset when the radiated emissions are measured.

The frequency range from 30MHz to 10th harmonics was searched for spurious emissions from the device. Only those emissions reported were detected. All other emissions were at least 20 dB below the applicable limits.

The device supported several power-up methods (powered by rechargeable battery pack, alkaline batteries, charging cradle, adaptor and DC source from computer's USB port). All power-up methods were tested and the worst-case data was reported.

2.2 EUT Exercising Software

There was no special software to exercise the device. Once the PTT button was pushed, a signal was transmitted.

2.3 Special Accessories

No special accessory is needed for compliance of this device.

2.4 Measurement Uncertainty

When determining of the test conclusion, the Measurement Uncertainty of test has been considered.

Uncertainty and Compliance - Unless the standard specifically states that measured values are to be extended by the measurement uncertainty in determining compliance, all compliance determinations are based on the actual measured value.

2.5 Equipment Modification

Any modification installed previous to testing by Giant Electronics Ltd. will be incorporated in each production model sold/leased in the United States.

No modification were installed by Intertek Testing Services Hong Kong Ltd.

- 2.6 Support Equipment
 - 1. A headset with 1.2 m unshielded cable. (Supplied by Client)
 - 2. 1 x USB cable with 1 meter long (Supplied by Client)
 - 3. An ac adaptor for charging tray: 120VAC, 60Hz, 4W to 9VAC, 200mA, Model no: DV-0920ACS (Supplied by Client)
 - 4. An ac adaptor with USB jack: 100-240VAC, 50/60Hz, 0.2A to 5.0VDC, 200mA, Model No: SSA-5W-05 US 050020F (Supplied by Client)
 - 5. Notebook, Brand: Lenovo, Model: T61, S/N: L3-CF468 (Supplied by Intertek)
 - External 1394 HDD, Brand: Smart-drive, Model: HD3-SU2FW, S/N: 0800261 (HDD: Seagate 120GB, Model: ST912017AS, S/N: 5RE031DT) (Supplied by Intertek)
 - 7. HP Notebook, Model: NX6320, S/N: CNU6370FWN, DoC Product (Supplied by Intertek)
 - 8. HP Printer, Model: C6431D, S/N: CN23B 680ZP, DoC Product (Supplied by Intertek)
 - 9. Genius Modem, Model: GM56EX, S/N: ZT5505000355, DoC Product (Supplied by Intertek)

EXHIBIT 3

RF POWER OUTPUT

3.0 **RF Power Output (Section 2.1046(a), 95.639(d))**

A. Equipment Used

Equipment	Brand Name	Model No.
Log Periodic Antenna	EMCO	3148
Test receiver	Rohde & Schwarz	ESVS30
Tuned Dipole Antenna	CDI	A100
Signal Generator	IFR	2023B

- B. Testing Procedure
- 1. On a test site, the EUT shall be placed at 1.5m height on a wooden turntable, and in the position closest to normal use as declared by the applicant.
- 2. The test antenna shall be oriented initially for vertical polarisation located 3m from EUT to correspond to the frequency of the transmitter.
- 3. The output of the test antenna shall be connected to the measuring receiver and the peak detector is used for the measurement.
- 4. The transmitter shall be switched on, if possible, without modulation and the measuring receiver shall be tuned to the frequency of the transmitter under test.
- 5. The test antenna shall be raised and lowered through the specified range of height until a maximum signal level is detected by the measuring receiver.

- 6. The transmitter shall then the rotated through 360° in the horizontal plane, until the maximum signal level is detected by the measuring receiver.
- 7. The test antenna shall be raised and lowered again through the specified range of height until a maximum signal level is detected by the measuring receiver.
- 8. The maximum signal level detected by the measuring receiver shall be noted.
- 9. The transmitter shall be replaced by a tuned dipole (substitution antenna).
- 10. The substitution antenna shall be orientated for vertical polarisation and the length of the substitution antenna shall be adjusted to correspond to the frequency of the transmitter.
- 11. The substitution antenna shall be connected to a calibrated signal generator.
- 12. If necessary, the input attenuator setting of the measuring receiver shall be adjusted in order to increase the sensitivity of the measuring receiver.
- 13. The test antenna shall be raised and lowered through the specified range of height to ensure that the maximum signal is received.
- 14. The input signal to the substitution antenna shall be adjusted to the level that produces a level detected by the measuring received, that is equal to the level noted while the transmitter radiated power was measured, corrected for the change of input attenuator setting of the measuring receiver.
- 15. The input level to the substitution antenna shall be recorded as power level in dBm, corrected for any change of input attenuator setting of the measuring receiver.
- 16. The measurement shall be repeated with the test antenna and the substitution antenna orientated for horizontal polarisation.
- 17. The measure of the effective radiated power is the larger of the two levels recorded, at the input to the substitution antenna, corrected for gain of the substitution antenna if necessary.

Notes: Negative sign in the margin column shows the value below limits.

Verdict: Passed

Test Engineer: Ken Sit

EXHIBIT 4

MODULATION CHARACTERISTICS

4.0 Modulation Characteristics (Section 2.1047(a)(b), 95.637(a))

In order to satisfy the 95.637(a) and 2.1047(b) requirements, Modulation Frequency Response and Modulation Limiting Characteristics are attached in Exhibit 4.1 & 4.2.

In order to satisfy the 2.1047(a) requirement, Audio Low Pass Filter Response is attached in Exhibit 4.3.

For electronic filing, the modulation frequency response curve and modulation limiting characteristic curve are saved with filename: mfr.pdf and mlc.pdf respectively.

For electronic filing, the audio low pass frequency response curve is saved with filename: lpf.pdf.

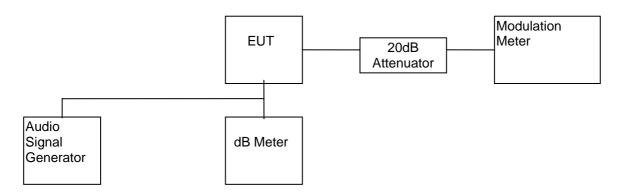

4.1 Modulation Frequency Response (Section 2.1047(a), 95.637(a))

A. Test Equipment

Equipment	Brand Name	Model No.
Audio Signal Generator	HP	HP8904A
AC Millivoltmeter	Leader	LMV-182A
20 dB RF Attenuator	Bird	8304-200-N
Radiocommunication Service Monitor	R&S	CMS54

B. Testing Procedure

1) Set-up the test equipment in the following configuration:

- 2) Set the audio signal generator frequency to the sound pressure level 127dBSPL at the microphone of the EUT.
- 3) The frequency of the audio signal generator is changed from 100Hz to 5kHz.
- 4) Record the frequency deviation.
- 5) The peak frequency deviation must not exceed:

GMRS + FRS : ±2.5kHz

C. Test Result

Table 2

Giant Electronics Ltd. MR350

Modulation Frequency Response

Test Engineer: Ken Sit Date of Test: November 27-December 18, 2008

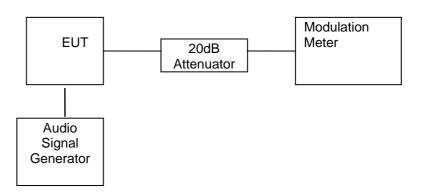

4.2 Modulation Limiting Characteristics (Section 2.1047(b), 95.637(a))

A. Test Equipment

Equipment	Brand Name	Model No.
Audio Signal Generator	HP	HP8904A
20 dB RF Attenuator	Bird	8304-200-N
Radiocommunication Service Monitor	R&S	CMS54

B. Testing Procedure

1) Set-up the test equipment in the following configuration:

- 2) Set the frequency of the audio signal generator to 500Hz and adjust the level from 47dBSPL to 137dBSPL.
- 3) Record the maximum value of plus or minus peak frequency deviation.
- 4) Repeat the above procedure with frequency 1000Hz, 2500Hz & 3125Hz.
- 5) The peak frequency deviation must not exceed:

GMRS + FRS : ±2.5kHz

C. Test Result

Table 3

Giant Electronics Ltd. MR350

Modulation Limiting Characteristics

Test Channel : 4

Modulation Input	Peak Frequency Deviation (kHz)	Peak Frequency Deviation (kHz)	Peak Frequency Deviation (kHz)	Peak Frequency Deviation (kHz)

4.3 Audio Low Pass Filter Response (Section 2.1047(a))

A. Test Equipment

Equipment	Brand Name	Model No.
Audio Signal Generator	HP	HP8904A
AC Millivoltmeter	Leader	LMV-182A

B. Testing Procedure

- 1) Connect the audio signal generator to the input of the post limiter low pass filter and the dB meter to the output of the post limiter low pass filter.
- 2) Apply a 1000 Hz tone from the audio signal generator and adjust the level per manufacturer's specifications. Record the dB level of the 1000 Hz tone as LEV_{REF}.
- Set the audio signal generator to the desired test frequency between 3000 Hz and the upper low pass filter limit. Record the dB level at the test frequency as LEV_{FREQ}.
- 4) Calculate the audio frequency response at the test frequency as:

low pass filter response = LEV_{FREQ} - LEV_{REF}

5) Repeat the above procedure for all the desired test frequencies.

C. Test Result

Table 4

Giant Electronics Ltd. MR350

Low-Pass Filter Response

Test Channel : 4

Audio Input Strength = 500mVrms

Frequency (kHz)	dB relative to 1 kHz	TIA/EIA-603C

100	-63.0	-50.0

Audio Output at 1kHz: -8.5dBV

Verdict: Passed

Test Engineer: Ken Sit

EXHIBIT 5

OCCUPIED BANDWIDTH

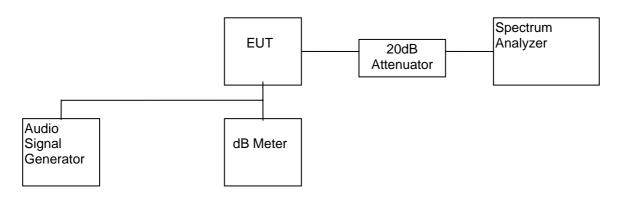

5.0 Occupied Bandwidth (Section 95.633(c))

A. Test Equipment

Equipment	Brand Name	Model No.
Audio Signal Generator	HP	HP8904A
AC Millivoltmeter	Leader	LMV-182A
20 dB RF Attenuator	Bird	8304-200-N
Spectrum Analyzer	HP	8951EM

B. Testing Procedure

1) Set-up the test equipment in the following configuration:

- 2) Set the level of audio signal generator to obtain 16 dB greater than required for 50% modulation.
- 3) The occupied bandwidth is measured with the spectrum analyzer set at 2kHz/div scan and 10dB/div.

C. Test Result

Table 5

Giant Electronics Ltd. MR350

System	Channel	Measured Bandwidth (kHz)	Limit (kHz)
GMRS	4	5.72	≤20
FRS	11	5.64	≤12.5

Verdict: Passed

For the electronic filing, the bandwidth plot is saved with filename: bw.pdf

Test Engineer: Ken Sit

EXHIBIT 6

SPURIOUS EMISSION

6.0 Spurious Emission

In order to satisfy the 95.635(b) requirement, the spurious emission from the EUT are measured and shown in the Exhibit 6.1.

6.1 Field Strength of Spurious Radiation (Section 2.1053, 95.635(b))

A. Test Equipment

Equipment	Brand Name	Model No.
Antenna	EMCO	A100, 3148, 3104C, 3115

- 3. The test is performed according to ANSI/TIA-603-C-2004.

Verdict: Passed

Test Engineer: Ken Sit

6.2 <u>Field Strength of Radiation Emission and AC Line Conducted Emission</u> (Section 15.109 & 15.107) - Weather Band Receiver

Data is included worst case configuration (the configuration which resulted in the highest emission levels). A sample calculation, configuration photographs and data tables of the emissions are included.

A. Field Strength Calculation

The field strength is calculated by adding the reading on the Spectrum Analyzer to the factors associated with preamplifiers (if any), antennas, cables, pulse desensitization and average factors (when specified limit is in average and measurements are made with peak detectors). A sample calculation is included below.

FS = RA + AF + CF - AG + PD + AV

where $FS = Field Strength in dB\mu V/m$ $RA = Receiver Amplitude (including preamplifier) in dB\mu V$ CF = Cable Attenuation Factor in dB AF = Antenna Factor in dB AG = Amplifier Gain in dB PD = Pulse Desensitization in dBAV = Average Factor in -dB

In the radiated emission table which follows, the reading shown on the data table may reflect the preamplifier gain. An example of the calculations, where the reading does not reflect the preamplifier gain, follows:

FS = RA + AF + CF - AG + PD + AV

A. Field Strength Calculation (cont'd)

<u>Example</u>

Assume a receiver reading of 62.0 dBµV is obtained. The antenna factor of 7.4 dB and cable factor of 1.6 dB is added. The amplifier gain of 29 dB is subtracted. The pulse desensitization factor of the spectrum analyzer was 0 dB, and the resultant average factor was -10 dB. The net field strength for comparison to the appropriate emission limit is 32 dBµV/m. This value in dBµV/m was converted to its corresponding level in μ V/m.

 $RA = 62.0 dB\mu V$ AF = 7.4 dB CF = 1.6 dB AG = 29.0 dB PD = 0 dBAV = -10 dB

 $FS = 62 + 7.4 + 1.6 - 29 + 0 + (-10) = 32 dB\mu V/m$

Level in μ V/m = Common Antilogarithm [(32 dB μ V/m)/20] = 39.8 μ V/m

B. Radiated Emission Configuration Photograph - Weather Band Receiver

Worst Case Radiated Emission at 140.600 MHz

For electronic filing, the worst case radiated emission configuration photograph is saved with filename: config photos.pdf

C. Radiated Emission Data - Weather Band Receiver

The data on the following page lists the significant emission frequencies, the limit and the margin of compliance. Numbers with a minus sign are below the limit.

Judgement: Passed by 8.6 dB margin

FCC Limit for FRS (95.627(b)): $\leq \pm 0.00025\%$ RSS-210 Limit for GMRS and FRS (A6.2.6, A6.1.6): $< \pm 5$ ppm

Verdict: Passed

Test Engineer: Ken Sit

Date of Test: November 27-December 18, 2008

7.2 Frequency Stability - Temperature (Section 2.1055(a)(b), 95.627(b))

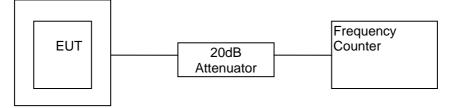

A. Test Equipment

Equipment	Brand Name	Model No.
20 dB RF Attenuator	Bird	8304-200-N
Frequency Counter	OPTOELECTRONICS	3000A

B. Testing Procedure

1) Set-up the test equipment in the following configuration:

Temperature Chamber

- 2) Set the Temperature Chamber to 20°C and stabilize the EUT temperature for one hour. Set transmitter ON for two minutes.
- 3) Measure the channel frequency of channel 4, 11 in MHz.
- 4) Turn the EUT OFF.
- 5) Repeat the above procedure from -30°C to 50°C with 10°C increment for GMRS.
- 6) Repeat the above procedure from -20°C to 50°C with 10°C increment for FRS.

C. Test Result

Table 8(a)

Giant Electronics Ltd. MR350

Frequency Deviation with Temperature Variation

Channel: 4

Temperature	Assigned	Measured	Deviation	*Frequency Tolerance with
	Frequency	Frequency		reference to its value at +20°C
(°C)	(MHz)	(MHz)	(%)	(ppm)
-30	462.63750	462.63622	-0.000277	-3.5
-20	462.63750	462.63679	-0.000153	-2.3
-10	462.63750	462.63730	-0.000043	-1.2
0	462.63750	462.63794	0.000095	0.2
10	462.63750	462.63797	0.000102	0.2
20	462.63750	462.63786	0.000078	0.0
30	462.63750	462.63765	0.000032	-0.5
40	462.63750	462.63747	-0.000006	-0.8
50	462.63750	462.63760	0.000022	-0.6

Remark: 1) For GMRS, frequency tolerance must be maintained within a frequency tolerance of 0.0005%.

2) *This column is presentable for Industry Canada Certification only.

Verdict: Passed

Test Engineer: Ken Sit

Date of Test: November 27-December 18, 2008

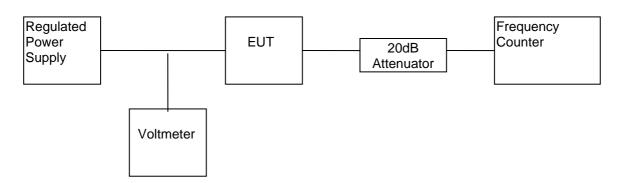

7.3 Frequency Stability - Voltage (Section 2.1055(d), 95.627(b))

A. Test Equipment

Equipment	Brand Name	Model No.
Regulated Power Supply	PAD	30-35L
20 dB RF Attenuator	Bird	8304-200-N
Voltage meter	Fluke	87
Frequency Counter	OPTOELECTRONICS	3000A

B. Testing Procedure

1) Set-up the test equipment in the following configuration:

- 2) Vary the level of regulated power supply to the manufacturer specified battery end point of the EUT.
- 3) Measure the channel frequency of channel 4 and 11 in MHz.

C. Test Result

Table 9

Giant Electronics Ltd. MR350

Frequency Deviation with Voltage Variation

The manufacturer specified battery end point 3.3V

Channel	Frequency	Measured	Tolerance
	(MHz)	Frequency (MHz)	(%)
4	462.63750	462.63758	0.000017
11	467.63750	467.63758	0.000017

Remark: 1) For FRS, frequency tolerance must be maintained within a frequency tolerance of 0.00025%.

- 2) For GMRS, frequency tolerance must be maintained within a frequency tolerance of 0.0005%.
- 3) The test voltage is from primary supply voltage to 3.3V

Test Engineer: Ken Sit
