RE: Belkin Corporation

FCC ID: K7SAV55000

After a review of the submitted information, I have a few comments on the above referenced Application.

- 1) The FRN provided does not appear to match any manufacture. Please check. Note that a grant can not be issued without a proper FRN number.
- 2) This device appears to contain multiple antennas. Please confirm how many antennas are used for TX and how many are used for Rx.
- 3) It is uncertain if the device may TX on multiple antennas at the same time. Please explain if the device may TX on multiple antennas at the same time. If so, this would likely be considered MIMO (multiple input/multiple output) technology. If considered as MIMO, this would require certification by the FCC since it would be considered new technology.
- 4) The label placed on the outside of the end device should contain the words "Contains". However, the label applied directly to the mini-PCI module should not. Please correct.
- 5) Page 20 of the test report shows 8480 MHz as a restricted band, but does not provide average data to show compliance to 54 dBuV/m.

The items indicated above must be submitted before processing can continue on the above referenced application. Failure to provide the requested information may result in application termination. Correspondence should be considered part of the permanent submission and may be viewed from the Internet after a Grant of Equipment Authorization is issued.

Please do not respond to this correspondence using the email reply button. In order for your response to be processed expeditiously, you must submit your documents through the AmericanTCB.com website. Also, please note that partial responses increase processing time and should not be submitted.

Any questions about the content of this correspondence should be directed to the sender.
