RE: Belkin Components

FCC ID: K7SF5D6021

After a review of the submitted information, I have a few comments on the above referenced Application.

These comments are all made upon the assumption that the EUT's full conducted output power is 18.2 mW and the antenna gain is -1.0 dBi.

- 1) The users manual shows a PCMCIA card with external photographs on page 7 & 9 of 22. This device contains internal antennas only. Also, the model number given in the manual is a F5D6020 instead of F5D6021. Please explain.
- 2) Page 12 of 22 the users manual states that the antenna is +1.5 dBi, while the test report/MPE exhibit states -1dBi. Please explain.

A handwritten signature in black ink, appearing to read "Timothy R. Johnson", is written over a light gray rectangular background.

Timothy R. Johnson
Examining Engineer
