## INTRODUCTION

### Introduction

Congratulations on your purchase of the Belkin wireless keypad. This set offers the latest technology for interference-free operation with 27MHz wireless connection and 4,096 IDs per channel. The keypad features on/off switch and auto power saving management for effective power conservation.

This user's guide describes how to connect the receiver to your computer, install default software drivers and set up the radio link.

### System Requirements

To use the keypad, your computer must meet the following hardware requirements and run one of the operating systems listed below:

#### Hardware

- PC with an Intel® Pentium® processor or equivalent
- USB 1.1 interface

#### Operating System

- Windows 95/Windows 98/WinNT /Windows me /WinXP /Windows 2000  
(Driver required in Win95 /Win98 /WinNT)

## SETUP

### Installing the Batteries

- Remove the battery cover located on the bottom of the keypad.
- Insert the supplied batteries, making sure that the positive (+) and negative (-) ends of each battery match the polarity indicators inside the battery housing.
- Turn on the keypad by sliding the Power switch on the underside of the keypad to the "on" position.

### Connecting the Receiver

- Plug the USB receiver into an available USB port on your computer.
- Follow any on-screen instructions to complete the default driver installation.
- The "Lock LED" light turns on.
- You are now ready to set the identification code to establish a communication link with the receiver.

### Setting the Identification Code

After your computer detects the USB receiver and the driver software is installed, you must set the ID code between the receiver and the keypad BEFORE you can use it. To do this, do the following:

- Press and release the setup key on the receiver. The LED is lit.
- Press the setup key on the keypad.
- Once the LED on the receiver turns off, the ID is set up and the receiver is locked.
- You are now ready to use the keypad.

*NOTE: Make sure that your computer is turned on and has detected the USB receiver before you set the ID code.*
