

**Operation Description:**

The Belkin Corporation TuneFM model F8Z049 is a device that wirelessly transmits audio signals from an iPod to a FM receiver. It also allows the user to set the transmission frequency in the band 88.1MHz to 107.9MHz in 0.1MHz intervals.

The TuneFM model F8Z049 is a battery powered device. It operates on 3.3Vdc supplied by the iPod. It receives both serial communication and audio signal from the iPod.
