

# Appendix C. Maximum Permissible Exposure

FCC ID: K7SF9K1117V2 Page No. : C1 of C3

# 1. Maximum Permissible Exposure

## 1.1. Applicable Standard

Systems operating under the provisions of this section shall be operated in a manner that ensures that the public is not exposed to radio frequency energy levels in excess limit for maximum permissible exposure. In accordance with 47 CFR FCC Part 2 Subpart J, section 2.1091 this device has been defined as a mobile device whereby a distance of 0.25 m normally can be maintained between the user and the device.

(A) Limits for Occupational / Controlled Exposure

| Frequency Range<br>(MHz) | Electric Field<br>Strength (E) (V/m) | Magnetic Field<br>Strength (H) (A/m) | Power Density (S)<br>(mW/ cm²) | Averaging Time<br> E  <sup>2</sup> , H  <sup>2</sup> or S<br>(minutes) |
|--------------------------|--------------------------------------|--------------------------------------|--------------------------------|--|
| 0.3-3.0                  | 614                                  | 1.63                                 | (100)*                         | 6  |
| 3.0-30                   | 1842 / f                             | 4.89 / f                             | (900 / f)*                     | 6  |
| 30-300                   | 61.4                                 | 0.163                                | 1.0                            | 6  |
| 300-1500                 |                                      |                                      | F/300                          | 6  |
| 1500-100,000             |                                      |                                      | 5                              | 6  |

#### (B) Limits for General Population / Uncontrolled Exposure

| Frequency Range<br>(MHz) | Electric Field<br>Strength (E) (V/m) | Magnetic Field<br>Strength (H) (A/m) | Power Density (S)<br>(mW/ cm²) | Averaging Time<br> E  <sup>2</sup> , H  <sup>2</sup> or S<br>(minutes) |
|--------------------------|--------------------------------------|--------------------------------------|--------------------------------|--|
| 0.3-1.34                 | 614                                  | 1.63                                 | (100)*                         | 30   |
| 1.34-30                  | 824/f                                | 2.19/f                               | (180/f)*                       | 30   |
| 30-300                   | 27.5                                 | 0.073                                | 0.2                            | 30   |
| 300-1500                 | -                                    | -                                    | F/1500                         | 30   |
| 1500-100,000             | -                                    | -                                    | 1.0                            | 30   |

Note: f = frequency in MHz; \*Plane-wave equivalent power density

#### 1.2. MPE Calculation Method

E (V/m) = 
$$\frac{\sqrt{30 \times P \times G}}{d}$$
 Power Density:  $Pd$  (W/m²) =  $\frac{E^2}{377}$ 

 $\mathbf{E}$  = Electric field (V/m)

P = Average RF output power (W)

G = EUT Antenna numeric gain (numeric)

**d** = Separation distance between radiator and human body (m)

The formula can be changed to

$$Pd = \frac{30 \times P \times G}{377 \times d^2}$$

From the EUT RF output power, the minimum mobile separation distance, d=0.2m, as well as the gain of the used antenna, the RF power density can be obtained.

Report No.: FR2O2519

### 1.3. Calculated Result and Limit

For 5GHz UNII Band: (15.407)
Antenna Type: Printed Antenna

Max Conducted Power for IEEE 802.11an 20MHz: 15.99 dBm

| IAntenna Gain<br>(dBi) | Antenna Gain<br>(numeric) | Average<br>Output Power<br>(dBm) | Average<br>Output Power<br>(mW) | Power Density<br>(S)<br>(mW/cm²) | Limit of Power<br>Density (S)<br>(mW/cm²) | Test Result |
|------------------------|---------------------------|----------------------------------|---------------------------------|----------------------------------|---|-------------|
| 7.46                   | 5.5740                    | 15.9858                          | 39.6806                         | 0.044025                         | 1   | Complies    |

For 5GHz ISM Band:

Antenna Type: Printed Antenna

Max Conducted Power for IEEE 802.11an20: 22.30 dBm

| Directional<br>Antenna Gain<br>(dBi) | Antenna Gain<br>(numeric) | Average<br>Output Power<br>(dBm) | Average<br>Output Power<br>(mW) | Power Density<br>(S)<br>(mW/cm²) | Limit of Power<br>Density (\$)<br>(mW/cm²) | Test Result |
|--------------------------------------|---------------------------|----------------------------------|---------------------------------|----------------------------------|--|-------------|
| 7.46                                 | 5.5740                    | 22.2959                          | 169.6660                        | 0.188241                         | 1  | Complies    |

For 2.4GHz Band:

Antenna Type: Printed Antenna

Max Conducted Power for IEEE 802.11n20: 23.03 dBm

| Antenna Gain<br>(dBi) | Antenna Gain<br>(numeric) | Average<br>Output Power<br>(dBm) | Average<br>Output Power<br>(mW) | Power Density<br>(S)<br>(mW/cm²) | Limit of Power<br>Density (S)<br>(mW/cm²) | Test Result |
|-----------------------|---------------------------|----------------------------------|---------------------------------|----------------------------------|---|-------------|
| 7.16                  | 5.2059                    | 23.0281                          | 200.8204                        | 0.208091                         | 1   | Complies    |

#### **CONCULSION:**

Both of the WLAN 2.4GHz Band and WLAN 5GHz Band can transmit simultaneously, the formula of calculated the MPE is:

CPD1 / LPD1 + CPD2 / LPD2 + .....etc. < 1

CPD = Calculation power density

LPD = Limit of power density

Therefore, the worst-case situation is 0.208091 / 1 + 0.188241 / 1 = 0.396332, which isless than "1". This confirmed that the device comply with FCC 1.1310 MPE limit.
